1 Executive Summary

Nexon Asia Pacific (Nexon) is pleased to provide NobleOak Aspire Pty Ltd (NobleOak, Customer) with this Statement of Work (SOW) for Managed Services Partnership, under the terms and conditions of the Master Services Agreement (MSA) entered into between Nexon and NobleOak.

1.1 Technical Summary

Customer Service is the centre of everything we do here at Nexon. As part of this SOW, Nexon will provide NobleOak with our Gold-Plus tier Support Model which includes 24x7x365 support coverage (including weekends and public holidays) and measurable service level targets including an SLA target of 95% (response) and 85% (resolution), measured 24x7, monthly. These SLA's will be adhered to by Nexon for all included managed services and associated support service requests for the duration of the term.

We have also included a Service Delivery Manager to be the point of contact and governance for all Nexon services provided to NobleOak.

Items described below are for summary purposes only, subject to the detail provided throughout this SOW.

Nexon's solution for NobleOak includes:

- Transition & Onboarding
  - Working with NobleOak to handover in-scope services from the incumbent.
  - Migration of virtual servers to Microsoft Azure.
  - Migration of Microsoft CSP subscriptions to Nexon and deploying features in Microsoft 365 Business Premium, including Microsoft Defender and Microsoft Intune for modern device management of corporate notebook/laptop devices.
  - Implementation of new network security solution (Security Access Service Edge – SASE), including virtual appliances in Microsoft Azure, physical appliances at Market St head office, and client agents for corporate or home devices. Provisioning of new Fast Fibre 1000 and NBN 100/40 FTTB WAN links at Market St.
  - Enable Nexon's security services, including SIEM and SOC, Vulnerability Management, Cyber Awareness Training.
  - Provision Nexon's ITSM platform for NobleOak internal IT department fulfillers.
- Ongoing services:
  - Gold-Plus SLA.
  - Service Delivery Management – regular reporting & audit requirements.
  - User Support & Management:
    - Service Desk and End-User Support for all NobleOak staff.
    - Single point of initial contact no matter which provider ultimately is responsible for the services.
    - Collaboration with NobleOak's internal first-line support.
    - Workstation & Supported OS management.
    - Mobile device support.
    - Peripheral support.
    - User account / identity management including Microsoft MFA.
    - Microsoft 365 management – Exchange, SharePoint, Teams, OneDrive, and supporting Microsoft services.

- Infrastructure managed services, including:
  - Microsoft Azure Cloud tenancy and workload management.
  - Backup Management.
  - Disaster Recovery management.
  - Database Platform management (Microsoft SQL).
  - Network Management (SASE solution, firewalls, switches, wireless access points).
  - Internet Services (2x internet services at Market St).
- Cyber Security services, including:
  - Cyber Security Service Delivery Management, through a separate SDM resource to the primary services SDM.
  - SecOps SLA.
  - Nexon's SOC service to provide a 24x7x365 security monitoring of the environment utilising Nexon tools, techniques, and cybersecurity personal.
  - A Managed SIEM service to aggregate security telemetry from the Managed Endpoint Detection Response (EDR) services, defined network data sources, provide correlation and detection capability.
  - A managed Endpoint Detection & Response (EDR) service based on Microsoft Defender Endpoint on workstations and Servers. Microsoft Defender will be integrated with the NobleOak managed SIEM instance and the Nexon Security Automation & Response (SOAR) platform to support additional detections, enrichment, alert notification, and automated response actions.
  - A managed Vulnerability Management Service to enable the proactive identification of potential attack vectors and other vulnerabilities within the environment.
  - A security training platform to provide regular security awareness training for staff.
  - A Security Access Services Edge (SASE) service to provide secure remote access to all users remotely connecting the NobleOak infrastructure.

    Additionally, Nexon can provide a Forensic and Critical Incident Response Retainer as an optional service (not included within this SOW) to provide NobleOak access to incident response consulting services to assist with detailed investigation and response services that fall outside the scope of the base service and access to specialist Forensic services as required.
- Nexon ServiceNow ITSM Lite to allow NobleOak internal IT department fulfillers to use the same ITSM platform as Nexon

- Genesys Cloud CX Contact Centre to replace existing ipSCAPE & Vonage platform
  - Implementation and Managed Service

1.2 Financial Summary

The following financial summary provides a high-level overview of both upfront and managed services costs for the duration of the 36-month contract term, based upon the initial infrastructure, user, and license counts.

NOTE: The following charges are a summarised version of the included **Investment Summary** and are not separate or independent charges. For specific details, please see the **Investment Summary**.

Nexon's negotiated commercial offer to NobleOak is based upon an Agreed Monthly Fee for the Agreement Term, which shall serve as both a cap for the scope and quantity of services described in this document, and a Minimum Monthly Fee. Where the consumption increases, the Monthly Fee will increase at the applicable unit fee or consumption / license fee.

Item	Term (Months)	Calculated Fee	Extended Fee
IT Managed Services			
Transition & Onboarding	1	~~$357,160.00~~ $120,000.00	~~$357,160.00~~ $120,000.00
Agreed Monthly Fee			
Months 1 - 12	12	~~$89,082.73~~ $75,000.00	~~$1,068,992.76~~ $900,000.00
Months 13 - 36	24	~~$89,082.73~~ $80,000.00	~~$2,137,985.52~~ $1,920.000.00
		Total	**$2,940,000.00**

Item	Term (Months)	Calculated Fee	Extended Fee
Genesys Contact Centre			
Professional Services	1	~~$120,000.00~~ $85,000.00	~~$120,000.00~~ $85,000.00
Agreed Monthly Fee			
Months 1 - 36	36	~~$15,475.50~~ $12,000.00	~~$557,118.00~~ $432,000.00
		Total	**$517,000.00**

2 Azure Cloud as a Service

Nexon proposes to transition NobleOak's virtual server workloads from the current private cloud architecture, a traditional server virtualisation solution provided by a third-party MSP, to a contemporary Microsoft Azure Public Cloud solution managed by Nexon.

The cloud migration will occur in 3 phases, the initial phase will be a straight lift and shift, a like for like migration, of existing workloads into Azure Infrastructure as a Service VMs. This reduces the change during migration and the associated risk. By simplifying the move we can ensure a fast, smooth transition out of the existing MSP's cloud.

During the first phases of the project Azure consumption costs should be expected to fluctuate with a ramping trend as the platform is instantiated, and workloads/data are deployed/migrated. Costs will then reduce as optimisation activities are completed in the third phase.

As soon as workloads are deployed or relocated Nexon will enable backups and monitoring and transition them to our operations team under the included managed services. Over the month that follows Nexon will ensure stable operation while planning some initial optimisation activities to occur in the following month.

Once initial optimisation activities have been implemented Nexon will have completed the migration and optimisation project. At this point all cloud related managed services will have transitioned into Nexon's operational teams for ongoing management.

All Microsoft Azure services consumed, along with Microsoft 365 subscriptions, will be billed monthly by Nexon under Microsoft's Cloud Service Provider (CSP) program.

The following subsections provide further detail into the included services.

2.1 Professional Services

Nexon will engage a team of consultants and specialists to work under the guidance of a senior project manager to migrate the existing virtual servers to Microsoft Azure

- Review requirements, existing systems and workloads.
- Design and build the Azure cloud platform.
- Migrate existing workloads to Microsoft Azure.
- Transition to Microsoft 365 Business Premium and implement Defender across server and M365 workloads.
- Transition deployed and migrated workloads, along with the existing Azure environment, to Nexon's operational managed services team.
- Complete a number of specified optimisation activities, including:
    - Right sizing and reserving Azure VM instances.
    - Implementing Microsoft Intune for corporate notebook/laptop devices.
    - Automate the suspension of compute services for Dev and UAT workloads outside of business hours.
    - Transition to Printix cloud printing and decommission the migrated print server.
    - Initial cleansing of historical backup recovery points transferred from the existing managed service provider.

2.2 M365 Business Premium & CSP Subscription Transition

Since it is required to leverage features required to deliver on the in-scope security management services Nexon will transition your M365 subscriptions to Business Premium immediately

This licensing brings:

- Access to functionality required to deliver the in-scope services, including features from Microsoft Defender, Microsoft Purview, Microsoft Intune and more.
- 50GB mailbox + 50GB archive
- 1TB OneDrive (not unlimited)

For in use shared mailboxes Nexon has included Exchange Online (Plan 1), Office 365 Data Loss Prevention, and Microsoft Defender for Office 365 (Plan 1).

Nexon has not included any licensing for shared mailboxes that have been converted from archived users. It is our recommendation to remove these mailboxes.

Nexon expects to provide the following Microsoft CSP subscriptions to NobleOak following optimisation.

Location	Quantity
Microsoft 365 Business Premium	150
Exchange Online (Plan 1)	5
Office 365 Data Loss Prevention	100
Defender for Office 365 (Plan 1)	100
Microsoft Defender for Business servers	13
Visio Plan 2	25
Power BI Pro	61
Project Plan 3	10
Power Automate Per User Plan	1
Microsoft 365 Apps for Enterprise	1
Microsoft Entra ID P2	1
Dynamics 365 Business Central Team Members	2
Microsoft Teams Rooms Pro	3
Microsoft Windows Server Standard 8-core	***TBC***
Microsoft Windows Server User CALs	***TBC***
Microsoft SQL Server Standard 2-core	***TBC***

IMPORTANT NOTE: *NobleOak will achieve savings through leveraging these features with Nexon's service once payment ceases for the existing licensing required by the current service provider to deliver their services. The third-party costs associated include those relating to M365, Exchange Online and malware protection software. These savings were illustrated in the presentation provided by Nexon but as they are dependent on the ceasing of commitments with the third party that is outside of our control they are not directly illustrated in this Statement of Work.*

2.3 WAN Link and Internet Service Provisioning

Nexon will provision 2x Internet services to NobleOak's head office location. These will be connected to the FortiGate firewall appliances noted in section 2.6.

Location	Usage	Type
Suite 1, Level 4, 44 Market St, Sydney NSW 2000	Primary	Fast Fibre Bandwidth: 1000Mbps Unlimited Internet
Suite 1, Level 4, 44 Market St, Sydney NSW 2000	Secondary	NWB – NBN FTTB Bandwidth: 100/40 Mbps Internet

***Note:** If required, the patching of the NBN service from the main distribution frame (MDF) to where the service is to be delivered, is the responsibility of the site's building manager/tenant. NobleOak is responsible for any internal cabling if required for installation of new internet service.*

All services have pre-qualified with $0 installation charges from wholesale carriers. This will be confirmed during provisioning, and should any installation costs be required, Nexon will inform NobleOak.

2.4 DNS Hosting and Public IP Addressing

Nexon will transition the various DNS Domains hosted and public IP addresses provided by the existing managed service provider to Microsoft Azure.

Location	Quantity
DNS Domains	48
Public IP Addresses	2

2.5 Azure Provisioning

A 2-region Azure solution will be deployed to the agreed design in its own subscription to allow the existing subscription supporting serverless application workloads that are managed by a third party to be segregated from the migrated workloads.

The following VM's will be deployed in the new subscription as a minimum. Windows severs of the same version as the existing Windows servers will be deployed fresh and promoted to domain controllers.

Region	Hostname / IP	Role	OS [1]	vCPUs	vRAM (GB)	Target Instance [2]	Managed Disk(s) [2,3]
Aust E	*TBC*	Active Directory	Win 2019	2	8	D2v5	1x E10 LRS
Aust E	*TBC*	Monitoring	Linux	2	8	D2v5	1x E10 LRS
Aust E	*TBC*	Firewall	V Appliance	4	8	F4	1x E10 LRS
Aust E	*TBC*	Active Directory	Win 2019	2	8	D2v5	1x E10 LRS
Aust SE	*TBC*	Monitoring	Linux	2	8	D2v5	1x E10 LRS
Aust SE	*TBC*	Firewall	V Appliance	4	*8*	F4	1x E10 LRS

[1] All Windows and MSSQL Server Licensing was priced for inclusion with the Microsoft Azure VMs
[2] The Target Instance and Managed Disk(s) details here were used to estimate the associated Azure Spend. The deployed Azure VM instance type and Azure managed disks may vary in design or over the contract term.
[3] Azure guarantees Virtual Machine Connectivity of 99.9% for VMs with "P" (Premium SSD) Managed Disks, 99.5% for VMs with "E" (Standard SSD) Managed Disks, or 99% for VMs with "S" (Standard HDD) Managed Disks.

Immediately following the deployment Microsoft Defender for Cloud and other software required for the managed security and operational management services will be deployed to the newly deployed workloads.

2.6 FortiGate Firewall Provisioning and Management

Nexon will deploy the three FortiGate firewalls, one in Australia E, one in Australia SE and another in NobleOak's Market Street office.

Nexon will deploy an initial configuration and prepare the firewalls to the designed specification for:

- Termination of links between Azure and NobleOak's offices
- Termination of IPSEC VPN tunnels to third party environments
- Firewalling for end-users in the Head Office
- Firewalling for the VM's in Microsoft Azure.

The following firewalls are in-scope for deployment and management by Nexon:

Location	Model	Quantity
Head Office (Market Street)	80F	2
Australia E	VM02V	1
Australia SE	VM02V	1

Immediately following the deployment Nexon will configure monitoring of the firewalls and integrate them with our security management, SOC and SIEM services.

Nexon will assume responsibility for management of the firewalls following provisioning.

Please refer to the RACI in section 9.7 Network Device Management for further information on the managed service inclusions.

2.7 VM Workload Migration

Nexon will relocate the following virtual server workloads and associated storage volumes from the existing private cloud provider to Microsoft Azure with a lift and shift approach to minimise change and contain risk in the accelerated migration project.

Region	Hostname / IP Address [1]	Role	OS [2]	vCPUs	vRAM (GB)	Target Instance [3]	Managed Disk(s) [3,4]
Aust E	10.212.2.7	SQL	Win 2022	2	16	E2ds v5	4x P15 LRS
Aust E	10.212.2.8	SQL	Win 2022	2	16	E2ds v5	4x P15 LRS
Aust E	10.212.2.6	SQL UAT	Win 2022	2	16	E2ds v5	4x E15 LRS
Aust E	10.212.2.18	PowerBI	Win 2022	2	32	E4ds v5	4x P15 LRS
Aust E	10.212.2.19	DEV	Win 2022	2	32	E4ds v5	4x E15 LRS
Aust E	10.212.2.28	File Server	Win 2019	1	4	D2v5	2x S50 LRS
Aust E	10.212.2.48	Print Server [5]	Win 2019	1	4	D2v5	1x E10 LRS
Aust E	10.212.2.41	SFTP	Win 2019	2	4	D2v5	1x S40 LRS
Aust E	10.222.2.10	Quote Tool Web	Win 2016	2	8	D2v5	1x S30 LRS

[1] Prior to Migration
[2] All Windows and MSSQL Server Licensing was priced for inclusion with the Microsoft Azure VMs
[3] The Target Instance and Managed Disk(s) details here were used to estimate the associated Azure Spend. The deployed Azure VM instance type and Azure managed disks may vary in design or over the contract term.
[4] Azure guarantees Virtual Machine Connectivity of 99.9% for VMs with "P" (Premium SSD) Managed Disks, 99.5% for VMs with "E" (Standard SSD) Managed Disks, or 99% for VMs with "S" (Standard HDD) Managed Disks.
[5] The Print Server will only be migrated temporarily, it will be replaced with Printix as an optimisation activity.

In addition to the VM's being migrated Nexon will also ensure that any additional data and Windows Server roles residing on the existing Active Directory servers is migrated to the newly deployed Active Directory servers.

Immediately following the cutover, during the scheduled outage, Firewall configuration will be adjusted to cater for the migrated services, Microsoft Defender and other software required for the managed security and operational management services, such as monitoring, will be deployed to the newly migrated workloads.

2.8 Backup

2.8.1 Azure VM Backup

Newly deployed VM workloads will have Azure backup configured following provisioning. Immediately following the migration of workloads Nexon will provision Microsoft Azure Backup to protect the migrated workloads.

Azure Backup will be configured with the following retention policy:

Recovery Point Type	Rolling Retention	Primary Copy Storage Type	Approx Capacity [1]	Offsite Copy Storage type	Approx Capacity [1]
Daily	14	Blob Hot LRS		Blob Hot LRS	
Weekly	4	Blob Hot LRS		Blob Hot LRS	
Monthly	12	Blob Cold LRS		Blob Cold LRS	
Yearly	7	Blob Archive LRS		Blob Archive LRS	

2.8.2 M365 Backup

Backups will be provided by Nexon as a service with our Veeam Backup for M365 service. This service includes coverage for data in Exchange Online, OneDrive, SharePoint and Teams.

Nexon's Veeam M365 backup service is licensed per mailbox and comes with unlimited back-end storage capacity.

Mailbox Types	Quantity	Backup
Active M365 User	150	Yes
Active Shared Mailbox	100	Yes
Archived User (Shared)	642	No [1]

[1] Nexon recommends <u>not</u> backing up the 642 Shared Mailboxes that represent archived users. These mailboxes have already been backed up and are no longer in active use. Continuing to back these up is an unnecessary cost. Historical backup data will be retained in low cost Blob storage until NobleOak is prepared to delete it.

2.8.3 Historical backup data migration

Nexon will create an Azure Blob – Hot tier storage bucket historical backup data. Permission will be provided to the existing provider so that they can copy all of NobleOak's existing backup data files into the Blob.

Once copied, after the initial stabilisation period and depending on the format of the data provided as advised by the existing provider (i.e. incremental forever or full + incremental short term, full monthlies, full yearlies), Nexon will re-arrange into Cool, Cold or Archive tiers as appropriate to optimise ongoing costs.

Following rearrangement of data Nexon expects the following:

Requirement	Primary Region	Secondar Region	Capacity (TB)
Archive Blob LRS	Aust E	Aust SE	23 [1]
[1] Nexon assumes the capacity described by NobleOak includes historical M365 backup data.			

Note: *Stale data (expired from the required retention policy) will be reviewed and where possible, with agreement from NobleOak, cleansed manually at the end of the first month. While the data continues to be retained, additional cleansing will occur annually.*

2.9 DR Enablement

Disaster Recovery will be configured to the designed specification with Azure Site Recovery. The target recovery region for Australia E is Australia SE.

Each DR protected VM will have equivalent virtual disks in the DR location as those provisioned for the production environment. With ASR the VM is instantiated on failover, there is no ongoing fee associated with the DR VM instance itself, only the storage.

The following VMs are in-scope for Disaster Recovery:

Hostname / IP [1]	Role	Managed Disk(s) [2]
10.212.2.7	SQL	4x P15 LRS
10.212.2.8	SQL	4x P15 LRS
10.212.2.6	SQL UAT	4x E15 LRS
10.212.2.18	PowerBI	4x P15 LRS
10.212.2.28	File Server	2x S50 LRS
10.212.2.41	SFTP	1x S40 LRS
10.222.2.10	Quote Tool Web	1x S30 LRS
[1] Prior to Migration		

Nexon charges a DR as a Service fee to manage the disaster recovery capability on a per-VM basis. This fee includes an annual non-disruptive DR failover test and supports the following DR Objectives

DR Objective	Target
Recovery Time (RTO)	4 Hours
Recovery Point (RPO)	1 Hour

2.10 Printix

Printix is a Software as a Service print management service that will allow NobleOak to decommission their print server, saving costs on Azure resources as well as the management of the virtual server than Nexon will initially migrate to Microsoft Azure.

Printix is charged based on the number of users that print in any given month.

Nexon assumes 30% of users print per month:

Print users per month
45

2.11 Microsoft Intune

NobleOak already use Intune for mobile devices. Nexon will extend this to corporate notebooks/laptops in the optimisation phase of the project. Nexon will also leverage Intune for ongoing management of these corporate devices.

Corporate Intune Devices
150

2.12 Azure Cloud Service Provider (CSP) Billing

All consumption of Azure services provided by Nexon will be billed by Nexon under the Microsoft Cloud Service Provider program, immediately.

Azure consumption being billed by the current provider, will be transitioned to Nexon following an immediate request to the existing provider made by NobleOak following the Microsoft prescribed process available here: **Transfer Azure subscription to another partner - Partner Center | Microsoft Learn.**

The following (from the page linked) illustrates the process to transfer billing at a high-level:

Step	Customer	Current partner	New partner
1	Customer notifies Microsoft and current partner in writing		
2		Create support ticket to request transfer	
3		Send completed transfer form to customer	
4		Complete Change of Cloud Solution Provider form	
5	Review, sign, & return form		Review, sign, & return form
6		Review form and attach to service request	
7			Remove old partner from account
8			Remove outdated access permissions

2.13 Azure Managed Services

Nexon will provision monitoring and security controls for the Azure environment following the provisioning of Azure services.

The service proposed includes management of backup and disaster recovery for workloads operating from Azure and using native backup and disaster recovery tooling or 3rd Party backup and disaster recovery tooling deployed in Azure for which licensing is procured as a service from Nexon.

Azure Management is charged in a simple percent of spend model whereby Nexon requires access to NobleOak's Azure billing portal and will charge based on your Azure Consumption in Australian Dollars.

The following method will be used to calculate the variable pricing applied to the Azure Standard Managed Service. The monthly Azure cloud bill will be compared against the Azure Managed Services fee table to determine the managed services fee each month. The calculation of this is subject to the following conditions:

- The combined cloud bill will be the sum of total cost of in-scope service types as recorded in Azure Cost Management in Australian Dollars. This excludes committed premium support, credits and refunds from Microsoft.
- Combined cloud bill will be calculated on agreed Azure AD tenants only.
- Combined cloud bill will exclude costs for services which are not in scope (e.g., Azure Virtual Desktop, Azure SQL Database).
- Reserved Instance costs will be amortised over their active lifetime to calculate the combined cloud bill (e.g., 1/12 of the cost for a 1-year Reserved Instance).
- This calculation does not factor in specific discounting available to NobleOak via buying agreements with other parties (e.g., Education discounting, Government discounts).
- A minimum charge / floor of $1,950.00 will apply for a single cloud tenancy (i.e., Azure Active Directory instance - a single tenancy may include multiple subscriptions or accounts). For clarity, the variable pricing each month will be the greater of the calculated "applied percentage" fee or the floor value.
- Where the spend is planned or forecast to exceed $150,000.00, a joint commercial review between the Parties will be held to determine the most appropriate fee based on the services at that time and projected into the future.

The table below will determine the Azure Managed Services fee based on NobleOak's Azure spend:

Tier	Azure Bill Bracket	Monthly Fee or Percentage of Azure Bill
Base	$0 - $5,600	$1,950 (fixed minimum)
Tier 1	$5,601 - $25,000	35.0%
Tier 2	$25,001 - $50,000	32.5%
Tier 3	$50,001 - $75,000	30.0%
Tier 4	$75,001 - $100,000	28.5%
Tier 5	$100,001 - $125,000	27.0%
Tier 6	$125,001+	25.5%

Please note that this service does not include the following which can be included separately:

- Management of 3rd party software or tooling (anything that is not Azure native)
- Disaster Recovery testing

Please refer to the RACI in section 9.5 Azure Cloud Management - Standard for further information on the managed service inclusions.

2.14 MSSQL Database Management

Following migration Nexon will initiate managed services for the in-scope Microsoft SQL databases platforms. This service is focussed at the database infrastructure level, it is not intended to provide comprehensive Database Administration support or to support application developers. If a deeper level of support is required Nexon can provide this separately.

The following MSSQL Servers are in-scope for Nexon's MSSQL Database Management service:

Hostname / IP [1]	Role
10.212.2.7	SQL
10.212.2.8	SQL
10.212.2.6	SQL UAT
[1] *Prior to Migration*	

Please refer to the RACI in section 9.6 Database Management for further information on the managed service inclusions.

2.15 Microsoft IIS Management

Following migration Nexon will initiate managed services for the in-scope Microsoft IIS Servers. This service is focussed at the web server infrastructure level, it is not intended to provide comprehensive support application developers. If a deeper level of support is required Nexon can provide this separately.

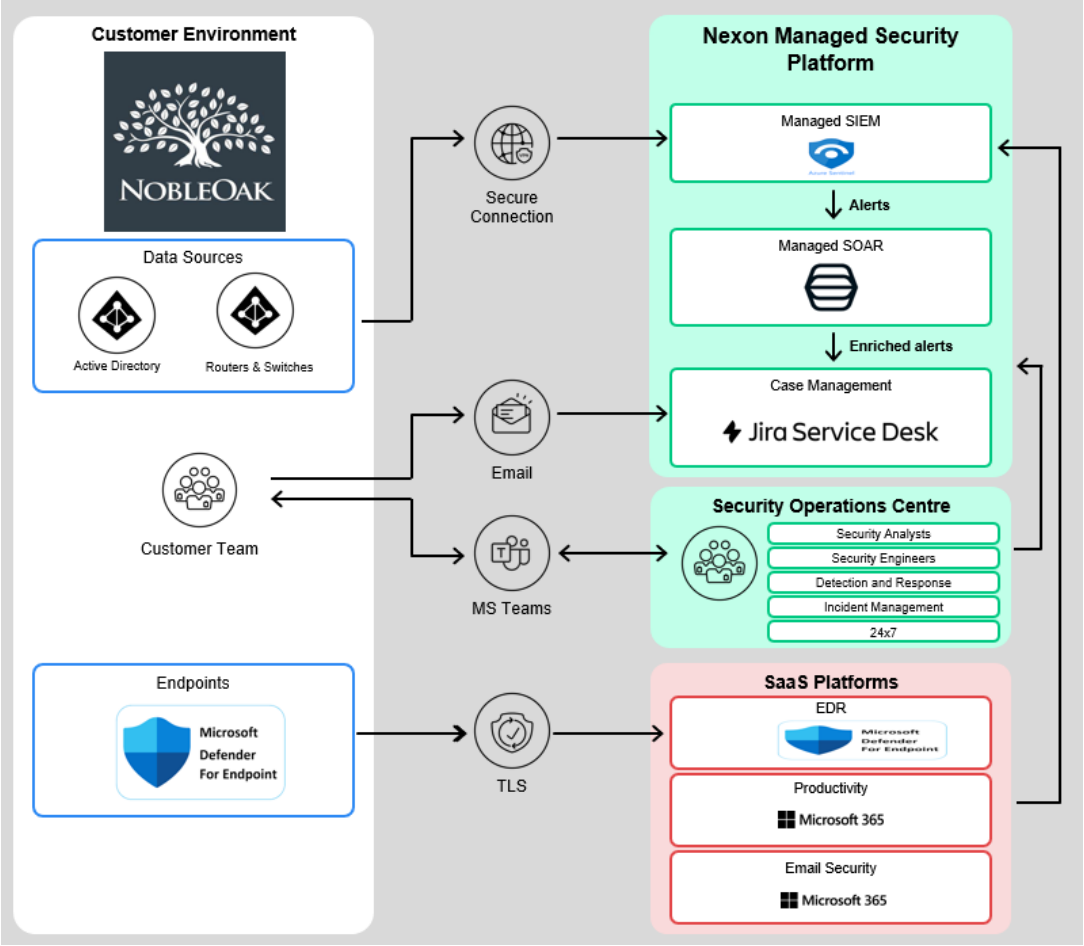

The following IIS Servers are in-scope for Nexon's MS IIS Management service:

Hostname / IP [1]	Role
10.222.2.10	Quote Web Tool
[1] *Prior to Migration*	

3 Security Services

3.1 Managed SIEM & SOC Solution Architecture

The Nexon proposed security architecture below details the interaction between the Nexon SOC and the NobleOak systems. Alerts generated by the NobleOak endpoint (desktop & server), routers, switches, Access Points and SaaS Platforms will be pulled into the Nexon orchestration, automation, and response (SOAR) platform via an API. The SOAR platform then uses automation to enrich the incident with contextual NobleOak information, such as threat intelligence. This enriched data is then used to prioritise and investigate the incident, and to take appropriate response actions. The managed SIEM technology is based on the Elastic (ELK) stack.

3.1.1 SIEM Operational Maintenance

Platform and configuration management includes all tasks required to actively keep all platform and module configurations up to date and aligned to NobleOak's changing business & environment requirements; including:

- Core SIEM capability configurations.
- Additional reporting and updated event collector configurations.

Configurations will be managed in accordance with Nexon standards for peer review and change control. These will be aligned to NobleOak internal processes and Nexon will become an operational extension of NobleOak's IT capabilities.

3.1.1.1 Data Collection

Nexon has developed a custom security hardened Linux based appliance that enables us to rapidly and consistently deploy our services into client environments. This is called Oversight.

One or more Oversight appliances will need to be deployed in a client environment. We recommend one appliance per major geographical location (e.g., datacentre) to support Disaster Recovery and High Availability, but may require additional appliances in each location in order to scale out services in order to support very large client environments.

An Oversight Appliance supports the service by running:

- Log collection software, e.g., to receive logs from transmitting systems in the client environment (e.g., syslog), and to collect logs from systems that we need to poll with the client environment.
- Threat intelligence publishing when client systems, for example firewalls, cannot connect directly to our cloud-based publishing platform
- Event enrichment, e.g., automated lookup of user account status and relationships
- Incident Response tool repository, e.g., to ensure we have access to tools

Oversight Appliances are hardened in-line with the Center for Internet Security RedHat Linux Server Level 2 Benchmark.

Audit logs, both access to the appliances and activity on them (commands, file changes etc) are collected and sent to our SIEM platform. Unauthorised attempts, access to, or modifications to the appliance are reported to the SOC.

In addition to Oversight appliances, specialist log and telemetry collection agents are installed on key monitored endpoints.

3.1.1.2 Data Parsing

Once log data has been collected, the collectors need to be able to parse the log data in a way that extracts the relevant information into standardised searchable fields through the process of normalisation. This is not a onetime activity as vendors update the structure of their log data frequently through product updates that incorporate new or expanded features. If these data sources are not consistently and constantly managed, the data stored in the SIEM platform quickly diverges from a common event model rendering dashboards, alerts, reports, correlation rules and searches incomplete and at worst inoperative.

3.1.1.3 Data Management

Data Retention Sovereignty

All SIEM services are operated on cloud providers “on soil” in an Australian location. All data is stored within Australia but can also be stored offshore for redundancy purposes.

Cloud Provider	Cloud Provider Location	Corresponding Australian Location
AWS	Asia-Pacific, South East 2	Sydney

Data Retention

Retention periods for Logs, Alerts & High-Fidelity Metrics events is outlined below:

Storage Type	Retention Period Average (days)
Logs	365
Alerts	365
High Fidelity Metrics (i.e. network connections, file opens, etc)	90

Disaster Recovery is addressed through the deployment of SIEM & SOC components in a minimum of two availability zones, with three availability zones used where possible. This ensures a minimum availability of 99.99%, while a much higher availability level being normally achieved. The below table outlines the managed SIEM availability.

SLA availability:

Metric	Value
Uptime SLA (HA environment)	99.99% in any given month

3.1.1.4 Historical SIEM data storage

Nexon will create an Azure Blob storage bucket for historical SIEM data store. Permission will be provided to the existing provider so that they can copy NobleOak’s existing SIEM data into the Blob.

Once copied, after the initial stabilisation period and depending on the format of the data provided as advised by the existing provider, Nexon will move the data into Cool, Cold or Archive tiers as appropriate to optimise ongoing costs.

Requirement	Primary Region	Secondar Region	Capacity (TB)
Archive Blob	Aust E	Aust SE	TBA [1]

[1] Capacity and storage tier requirements have not been advised and will be treated as additional Azure consumption – not included within the negotiated pricing.

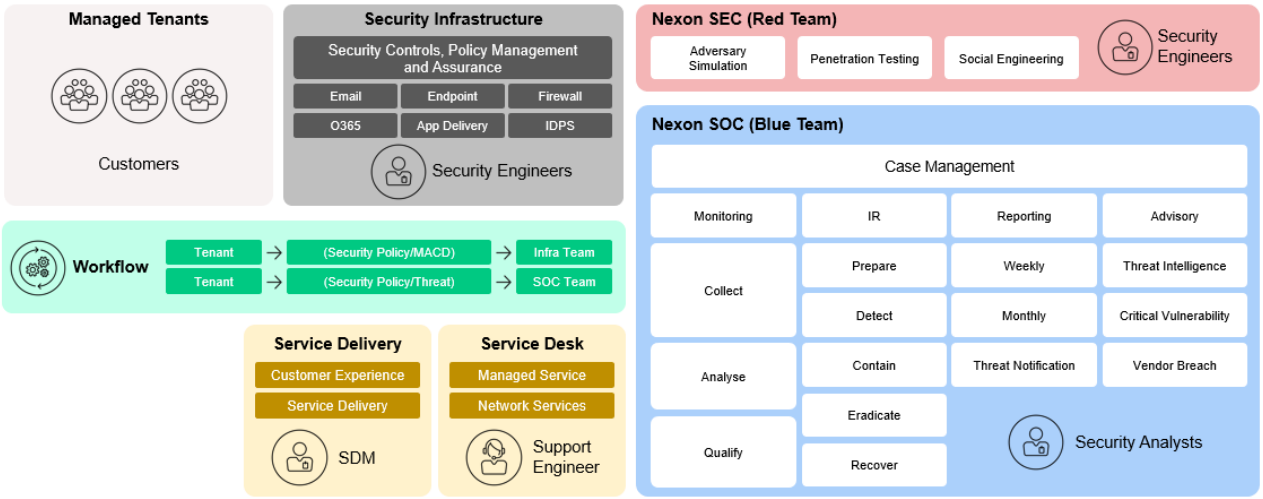

Nexon will provide NobleOak with permissions to the storage bucket to access the historical data. If NobleOak require Nexon to retrieve data from the historical storage, Nexon will scope and quote the activity.

Note: *Stale data removal (expired from the required retention policy) will be a manual process and performed only on request from NobleOak and performed as a time & materials activity.*

3.1.2 Nexon SOC Operating Model

The NobleOak service will have a defined service operating model consisting of the security infrastructure in scope & customised workflow (Runbooks) based on NobleOak's requirements. A Service Delivery Manager will be allocated to manage the internal process of familiarising the Service & SOC team with the account.

To ensure smooth operations and effective communication, a Service Delivery Manager will be assigned. Their role will be to oversee the process of acquainting the Service and SOC team with the account details and requirements. This approach ensures that our team is well-prepared and informed, enabling us to provide the best possible service.

Nexon has designed and built this capability under a "SOC first" approach closely aligning to MITRE's ATT&CK™ framework (refer to https://attack.mitre.org/ for additional information). The MITRE's ATT&CK (Adversarial Tactics, Techniques, and Common Knowledge) is a valuable framework for enhancing cybersecurity. It aids in identifying security vulnerabilities, improving threat detection and response, and making informed decisions about security controls. The MITRE organisation provides a knowledge base of adversary tactics and techniques, it serves as a foundation for developing specific threat models and methodologies across various sectors.

Additionally, the MITRE organisation is an additional security source that will be leveraged by the Nexon SOC to provide information about emerging threats, strengthens cyber threat intelligence and suggested improvements to alert triage and investigations.

3.1.2.1 Nexon SOC Structure

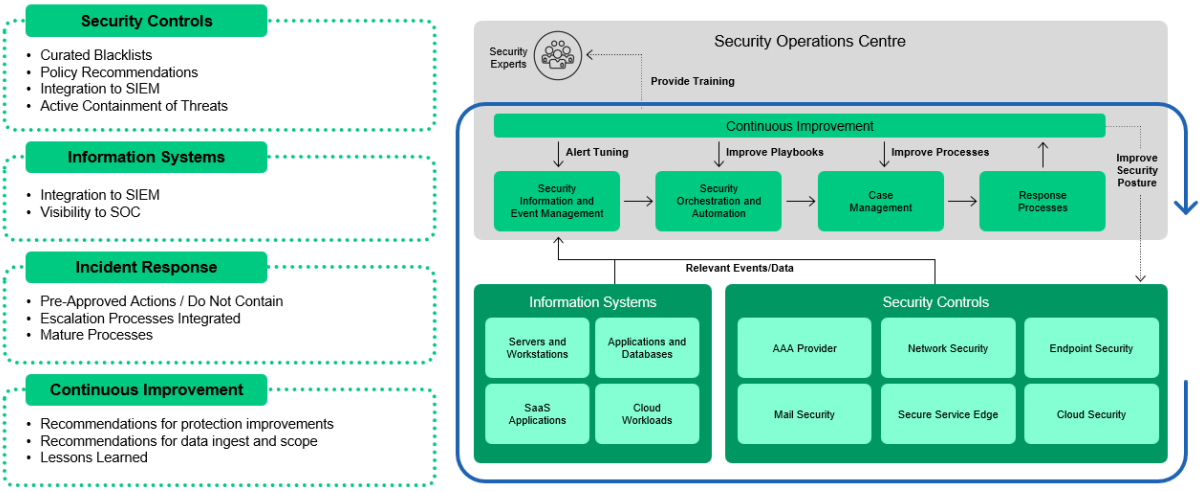

Nexon are very proud of our 100% Australian based SOC team. We are challenged and driven to detect and respond to threats to our client's environments. Our analysts not only understand the threats our customers face but also understand the context in which these threats exist. The SOC team consists of the following roles:

- **Tier 1 Analysts:** Responsible for the initial triage and analysis of security alerts.
- **Tier 2 Analysts:** Responsible for in-depth contextual analysis of the incident and response strategy to incidents escalated by the tier 1 analyst team.
- **Tier 3 Analysts:** Responsible for major incident response and other specialist tasks such as forensic investigation and threat hunting.

- **Threat Intelligence Analysts:** Responsible for the collection, assessment, integration and sharing of threat intelligence from reliable sources.
- **Security Engineers:** Responsible for technical and functional maintenance of the SOC infrastructure. Also responsible for the managed security platform services for our clients.
- **SOC Manager:** Responsible for the operational delivery of all SOC services.
- **SOC Architect:** Responsible for the technical vision of the security systems and services used within the SOC.

3.1.2.2 Security Workflow Architecture

The Nexon security workflow architecture below details the interaction between the Nexon SOC and the NobleOak systems. The security workflow between the Nexon SOC and the NobleOak systems presents all the required information at the fingertips of security analysts. This allows the Nexon SOC to make data and intelligence-led judgments and decisions on the appropriate next steps for further investigation, escalation, or response according to a well-developed and tested incident response (IR) process.

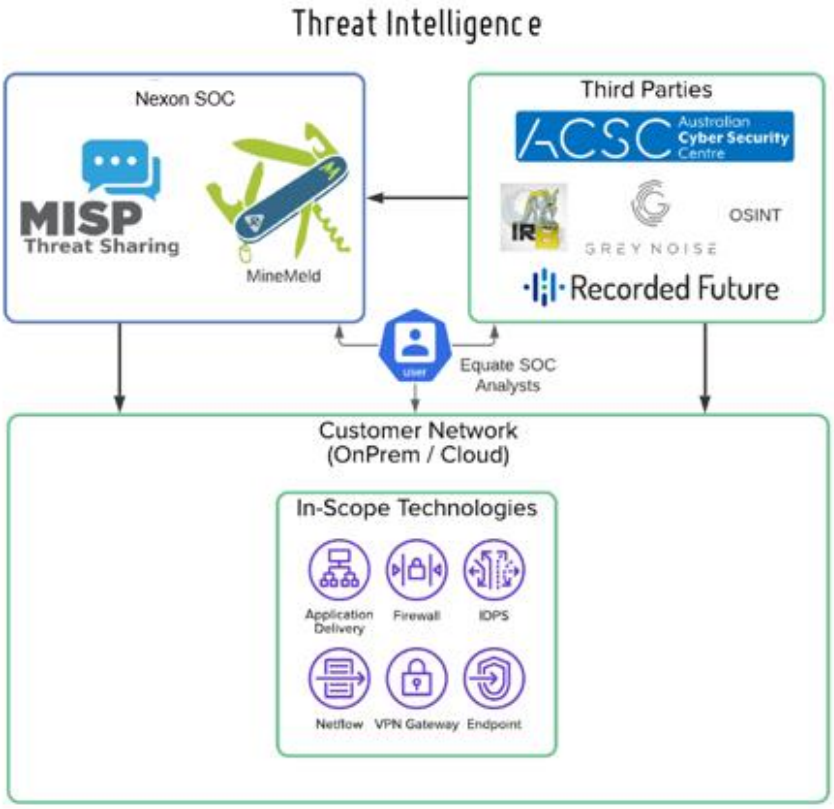

3.1.3 Incident Response

Incident detection and response is the heart of the SOC service, and our incident management process is based on information security guidance from the SANS institute, as well as NIST - 800-61r2 - Computer Security Incident Handling Guide and NIST - 800-171r1 - Protecting Controlled Unclassified Information in Non-federal Systems and NobleOak.

3.1.4 Customised Threat Intel Service & DarkWeb Monitoring Overview

The Threat Intelligence service is delivered by the Nexon SecOps team and is primarily used to support NobleOak specific detection capabilities within the SIEM and Security Analytics services, as well as to enrich alerts to more appropriate categorise and prioritise them.

The threat intelligence service covers the collection, publishing and application of threat intelligence to prevention and detection technologies within the environment. Threat Intelligence is provided via external data sources and tools operated by Nexon.

3.1.4.1 Incident Response Playbooks

Nexon have and continue to develop runbooks and playbooks for specific attack scenarios. These are maintained and evolve over time and form a standard set of playbooks that Nexon use to provide SOC services. Often clients prefer to respond to security scenarios in alternative ways, such as preferring to re-image a desktop client or restore from backup rather than a remediation approach. In these cases, we hold client specific runbooks for those specific scenarios.

The maintenance of the run books are the responsibility of Nexon as part of the delivery of its SOC services but the details of specific process and procedures related to incident response can be viewed and reviewed by NobleOak to ensure they are aligned with expectations and any additional NobleOak requirements.

3.1.4.2 Threat Containment

Threat containment will be undertaken either in accordance with pre-approved response actions or upon approval of containment activities granted by NobleOak.

Rapid Threat Containment in the form of Host isolation will be available to NobleOak via Microsoft Defender for Endpoint. Hosts that that do not have Microsoft Defender Endpoint deployed will not have the functionality of to perform host isolation. In the instance the endpoint does not have Microsoft Defender for Endpoint deployed, response capability will be limited to incident escalation to NobleOak along with remediation advice.

3.1.4.3 Security Analysis and Forensics

Security Analysis is performed by the Nexon SOC team using in scope systems and tools, principally SIEM and Security Analytics. The Nexon SecOps team will provide support via expert advice and provisioning of tools if the customer does not have the tools or the expertise to utilise them. Security Analysis & Forensics is primarily performed by human SOC analysts, supported by tools.

3.1.4.4 Incident Response Retainer = Optional Service (Not Costed)

The Nexon incident response retainer provides access to Nexon incident response and consulting resources to assist with actives that extend beyond the included allotment of threat mitigation hours included within the proposal, require specialist digital forensics capability or to assist with activities outside the scope of the base service.

The incident response retainer will remain valid for the term of the contracted service. Unused credit at the end of the contract period can be carried over upon resign of the contract.

In addition to incident management services NobleOak can draw down on the IR retainer as needed across the 12-month period. This ensures that Nexon is prepared to react quickly and effectively to a major security incident and benefit from proactive services that reduce the risk of damaging incidents and breaches.

NobleOak may also elect to draw down upon IR Retainer credit for additional services outside the scope of the base service which can include:

- **Tabletop exercises:** The simulation of a cyber incidents in a controlled environment to test and improve your response plans.
- **Cyber maturity assessments:** An evaluation of your organization's cybersecurity posture and provide recommendations for improvement.
- **Attack simulation:** Simulation of real-world cyber-attacks to help you identify and mitigate vulnerabilities.
- **Red/Blue team exercises**: Adversarial simulations to help test security defences against a variety of threats.
- **Strategic threat intelligence assessment/modelling**: The targeted collection and analysis of threat intelligence to understand the latest threats and how they may impact your organisation.

3.1.5 Nexon SOC Dashboards and Reporting

Nexon will provide NobleOak with access to dashboards and reporting telemetry available from the managed SIEM platform and managed EDR tool in addition to access to the Nexon SOC Case management system in additional to delivery of a monthly service reporting.

3.1.5.1 Dashboards and Reporting

NobleOak will have full access to the visualisation and dashboarding platform. The Nexon SIEM ships pre-built dashboards for commonly used logs, metrics and modules. With dashboards, data can be turned from one or more index patterns into a collection of panels that bring clarity to your data, tell a story about the data, and allow you to focus on only the data that’s important to you.

3.1.5.2 Managed SOC Case Management

NobleOak will have access to Nexon case management dashboard to view detailed information about all tickets raised and the status of each. This information can be extracted to view the details of a ticket and the alert that triggered the ticket. This information can be used by NobleOak to track trends and identify areas where improvements can be made.

3.1.5.3 Monthly Reporting – Sample Template

Below is the table of contents and an extract of some the data contained within the monthly report that will be provided to NobleOak.

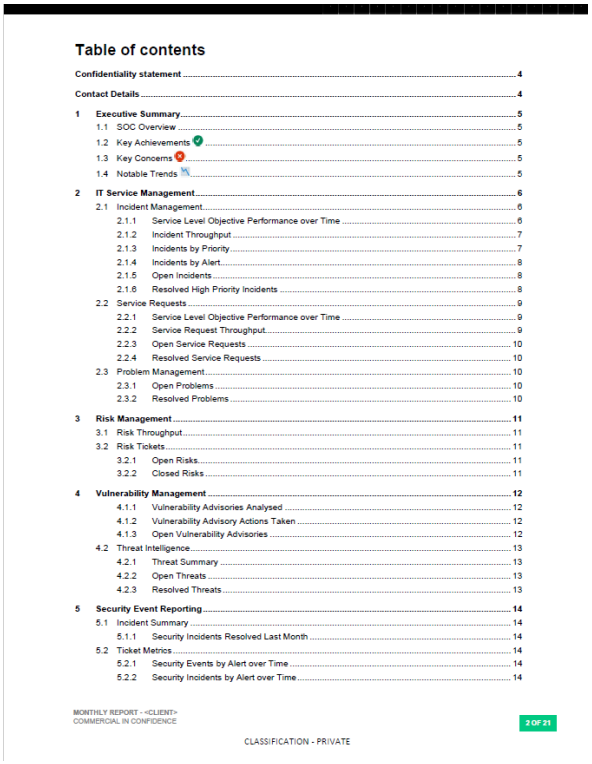

Table of contents

Confidentiality statement 4

- 4.1.1 Vulnerability Advisories Analysed 12
- 4.1.2 Vulnerability Advisory Actions Taken 12
- 4.1.3 Open Vulnerability Advisories 12
- 4.2 Threat Intelligence 13
  - 4.2.1 Threat Summary 13
  - 4.2.2 Open Threats 13
  - 4.2.3 Resolved Threats 13

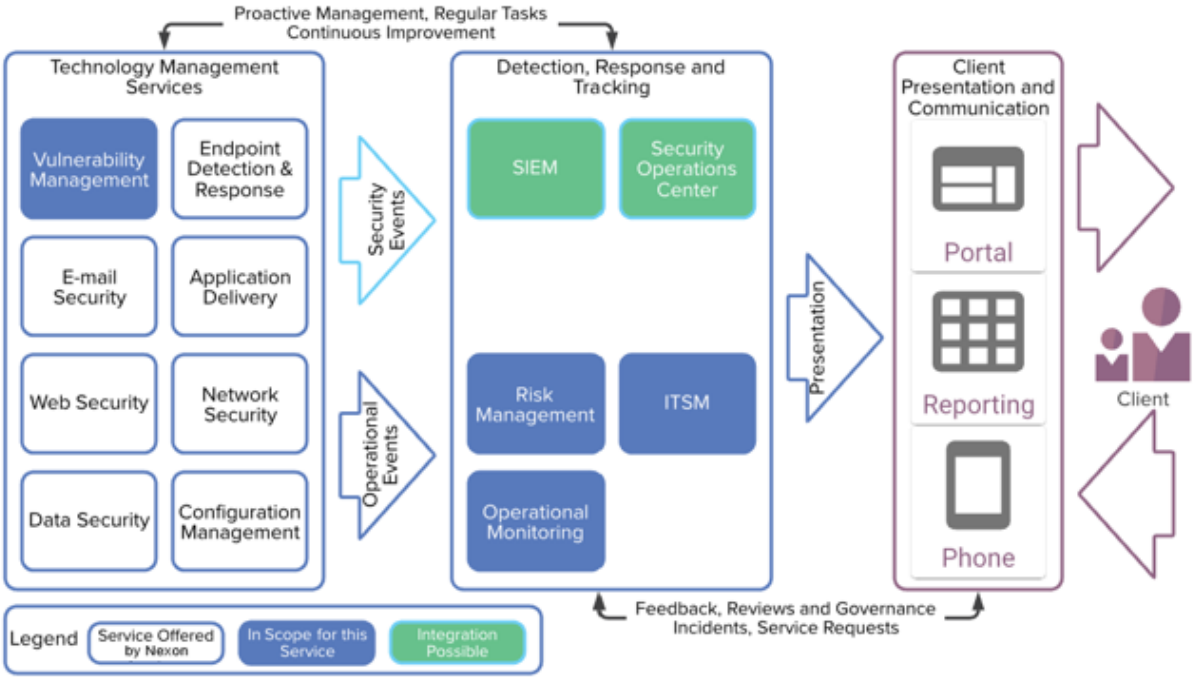

5 Security Event Reporting 14
- 5.1 Incident Summary 14
  - 5.1.1 Security Incidents Resolved Last Month 14
- 5.2 Ticket Metrics 14
  - 5.2.1 Security Events by Alert over Time 14
  - 5.2.2 Security Incidents by Alert over Time 14

3.2 Vulnerability Management Solution Overview

Nexon provides an end-to-end vulnerability visibility and management service providing NobleOak the confidence their attack surface and risk is minimised through customised reports and dashboards, directly accessible by the client's teams'.

3.2.1 Service Flows

The below diagram represents the flows of information in the offered Nexon Managed Security Services.

3.2.2 Vulnerability Scanning

Discovery scanning and vulnerability scanning is performed on a regular and scheduled basis and is managed entirely by Nexon. These scans can be customised and adapted to the environment to avoid potential issues. Discovered vulnerabilities are highlighted to asset owners and risk scores are calculated based on a number of factors, including the criticality of the vulnerable host and the potential impacts of the vulnerability. Vulnerabilities which have been patched or mitigated are automatically removed from active vulnerability dashboards and newly discovered devices outside the baseline inventory are documented in an unknown devices report.

Laptops that infrequently connect to the network will be scanned by the Nessus Scanner deployed on-site or via the Microsoft Vulnerability Manager.

3.2.2.1 Nexon Responsibilities

Nexon are responsible for all tasks for maintenance of the service components. This includes:

- Managing scanning policies. Scanning types and policies are agreed upon and configured during service onboarding. Day to day management and any adjustment of the policies would be performed by the Nexon SOC to ensure that the service is being delivered in the most optimal and effective way. NobleOak can make requests for adjustments to scope when required.

- Scheduling and managing scan tasks. Regular vulnerability scanning will be configured and automatically performed based on an agreed upon time schedule. This keeps the vulnerability data current.
- Managing blackouts and exceptions. Customised scanning policies would be defined for different categories of hosts and lists of hosts to be excluded from scans can also be maintained. This allows sensitive business critical systems to be excluded if required.
- Full license management.
- Vulnerability Management platform patching and version upgrades.
- Vulnerability definition updates to ensure scanners always contain the latest data before scans are executed.

3.2.2.2 External Vulnerability Scans

External vulnerability scans provide the client with a potential external attacker's view of the network perimeter. It is designed to highlight the risks that are exposed to the general internet.

External scans are launched from the secure Nexon SOC environment and don't require any hardware or software investment.

3.2.2.3 Internal Vulnerability Scans

Internal vulnerability scans are designed to allow NobleOak to assess the entire vulnerability landscape within their network. This is equally as, if not more, important as external scanning as threats will frequently permeate the network perimeter.

Nexon deploy industry leading scanning technology inside the organisation as virtual appliances on to existing client hardware or virtualised environments. This provides a comprehensive view of identified assets through discovery scans and their vulnerabilities and patching status through credential-based scanning.

3.2.3 Vulnerability Management Portal

The Vulnerability Management Portal is the core reporting and management platform employed by our service. Within the portal, the assets are classified, and vulnerabilities are managed based on the results of network discovery and vulnerability scans provided by:

- External vulnerability scanners
- Internal vulnerability scanners

3.2.3.1 Asset & Inventory Data Sources

Nexon ingest that data from the asset scanning and discovery tools into a central web-based asset and vulnerability reporting tool. This provides a single pane of glass view into NobleOak, the assets and vulnerabilities within NobleOak systems, and allows searching, sorting and customised reporting based on system and application groups.

3.2.3.2 Executive Dashboards

Customised dashboards offer an executive level overview of the current exposure of the organisation as well as historical data to track the trends in the overall risk to NobleOak. The access to the web-based reporting platform can be tailored for individual NobleOak asset owners to allow them to identify high risk findings and provide the data they need to remediate across their respective environments quickly.

3.2.4 Vulnerability Management Threat Intelligence – Recorded Future

Recorded Future provides the Nexon SOC with enhanced threat intelligence and threat alerting capabilities in context of NobleOak, relevant industry verticals, partner, and supplier organisations, as well as specific technology usage.

This allows the Nexon SOC to remain aware of, and proactively respond to new threats to NobleOak.

For example: The release of proof of concept or other forms of exploits for a recent vulnerability would be used to inform Customer of a change in risk regarding relevant vulnerabilities and the need to ensure they are patched.

3.2.5 Service Review Meetings

Nexon's Vulnerability Management service will also become an agenda item within the regular Service Review Meetings as held between key representatives from NobleOak and Nexon.

The monthly Service Review Meetings will provide an additional opportunity for NobleOak to reflect on the content of the VM reports that have been delivered in the preceding period and provide a forum to discuss any service issues and future direction and scope of the services provided.

3.2.6 Governance

3.2.6.1 Service Review Meetings

Monthly service review meetings between Nexon and NobleOak serve as the primary platform for discussing the service. They offer NobleOak the opportunity to reflect on recent report content, address service issues, and discuss future direction and scope. These meetings, attended by the client success director, client services director from Nexon, and key client stakeholders, occur on a monthly basis. Metrics and reports for the preceding period are shared in PDF format, and a redacted service report is included in the attachments folder.

3.2.6.2 Service Delivery Management

Nexon will provide a Service Delivery Manager (SDM) to govern and oversee all Nexon-provided IT managed services via an ITIL-based Service Management Framework.

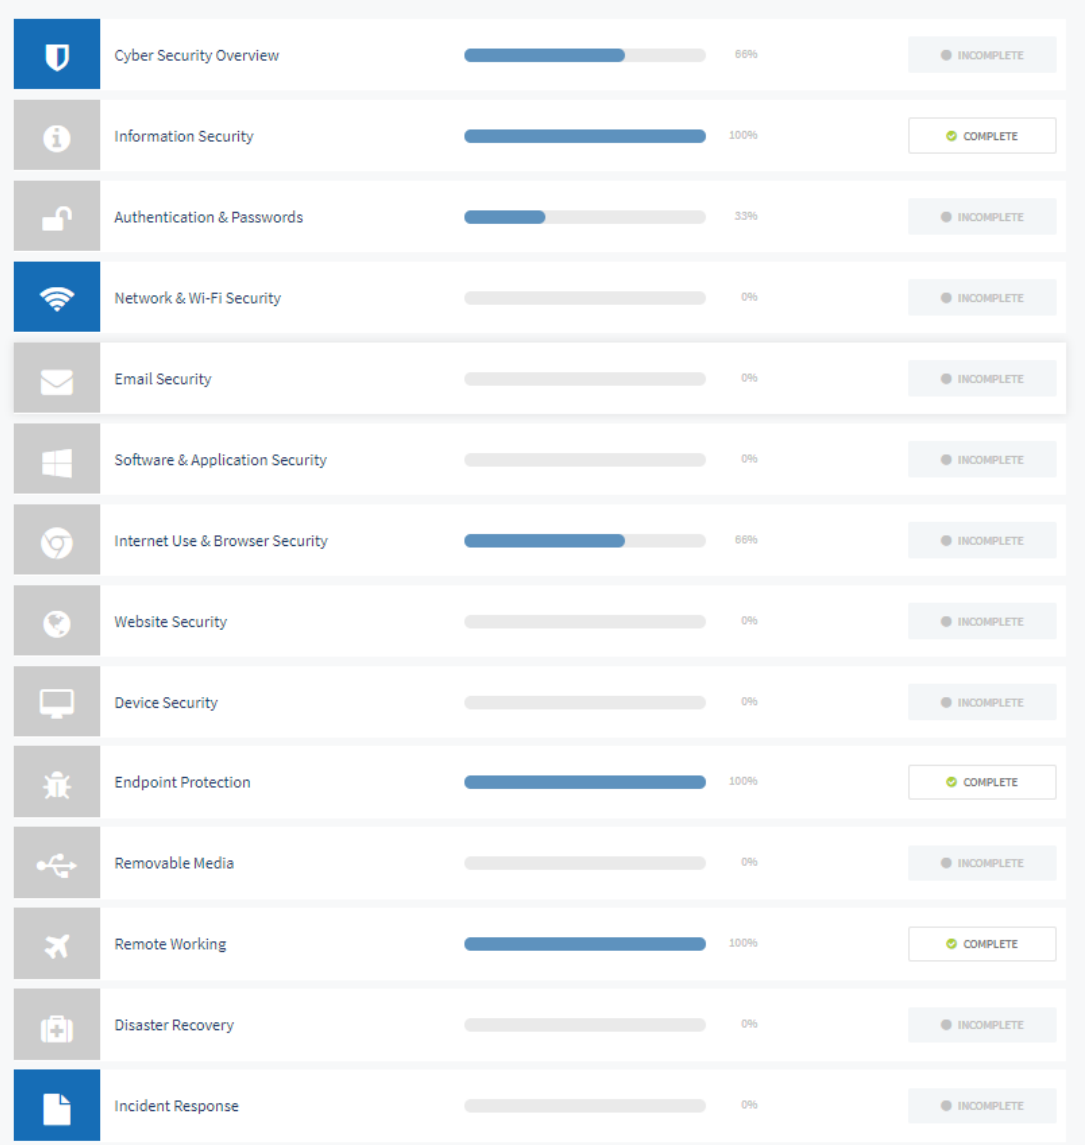

Tasks	Nexon	NobleOak / Nexon Service Desk
Escalation Management	R, A	C, I
Adhere to compliance of included SLA's and support coverage.	R, A	C, I
Service Documentation – Create and maintain process documentation for all in-scope services	R, A	C, I
Incident Management - Manage the incident resolution for in-scope services to restore services as quickly as possible, in accordance with Nexon's incident management processes.	R, A	C, I
Service Reporting - Produce standardised monthly reports from available ITSM and monitoring platforms for the in-scope environment and services.	R, A	C, I
Risk and Issues Management - Risk and issue management is the process to identify and log risks throughout the term of operational support. Nexon will maintain a risk and issues register for in-scope systems and allocate appropriate risk owner throughout the term of the engagement.	R, A	R, C
Request Management – Monitor execution against request appropriately raised service requests	R, A	C, I
Request Management – Raise requests through formal processes	C, I	R, A

3.3 Cyber Awareness Training

CyberAware is a SaaS based Cyber Awareness Training Platform that will allow NobleOak to launch regular phishing simulations to determine which staff are most at risk. For any staff who fall victim to a phishing campaign, they'll automatically be enrolled into tailored awareness training.

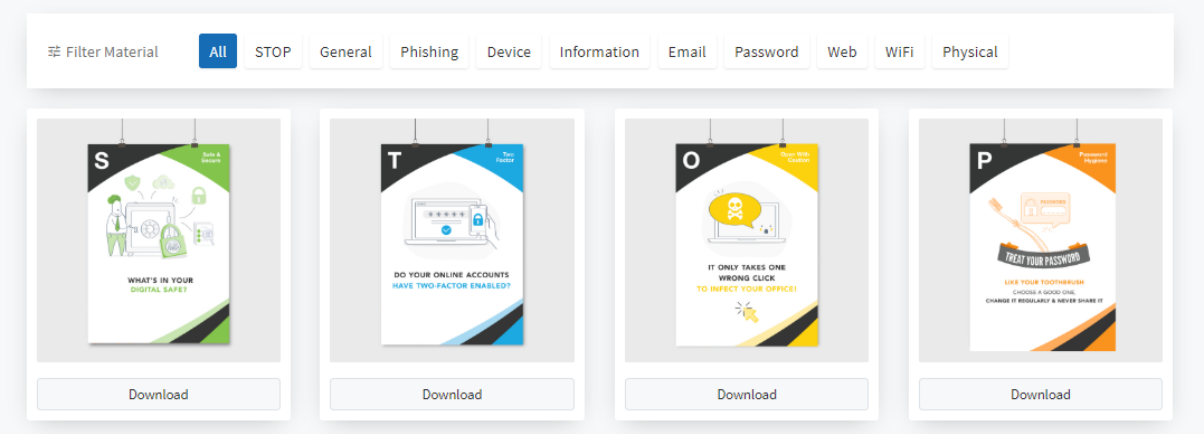

3.3.1 Business toolkit

The business security toolkit is an effective security awareness campaign that starts with good policies and procedures. Each category below contains policy templates, awareness material or operational checklists which are tailored to your organisation.

3.3.2 Awareness Material

Nexon's cyber security platform also provides a library of awareness material you can use with staff to build a culture of security awareness.

3.3.3 Awareness Training

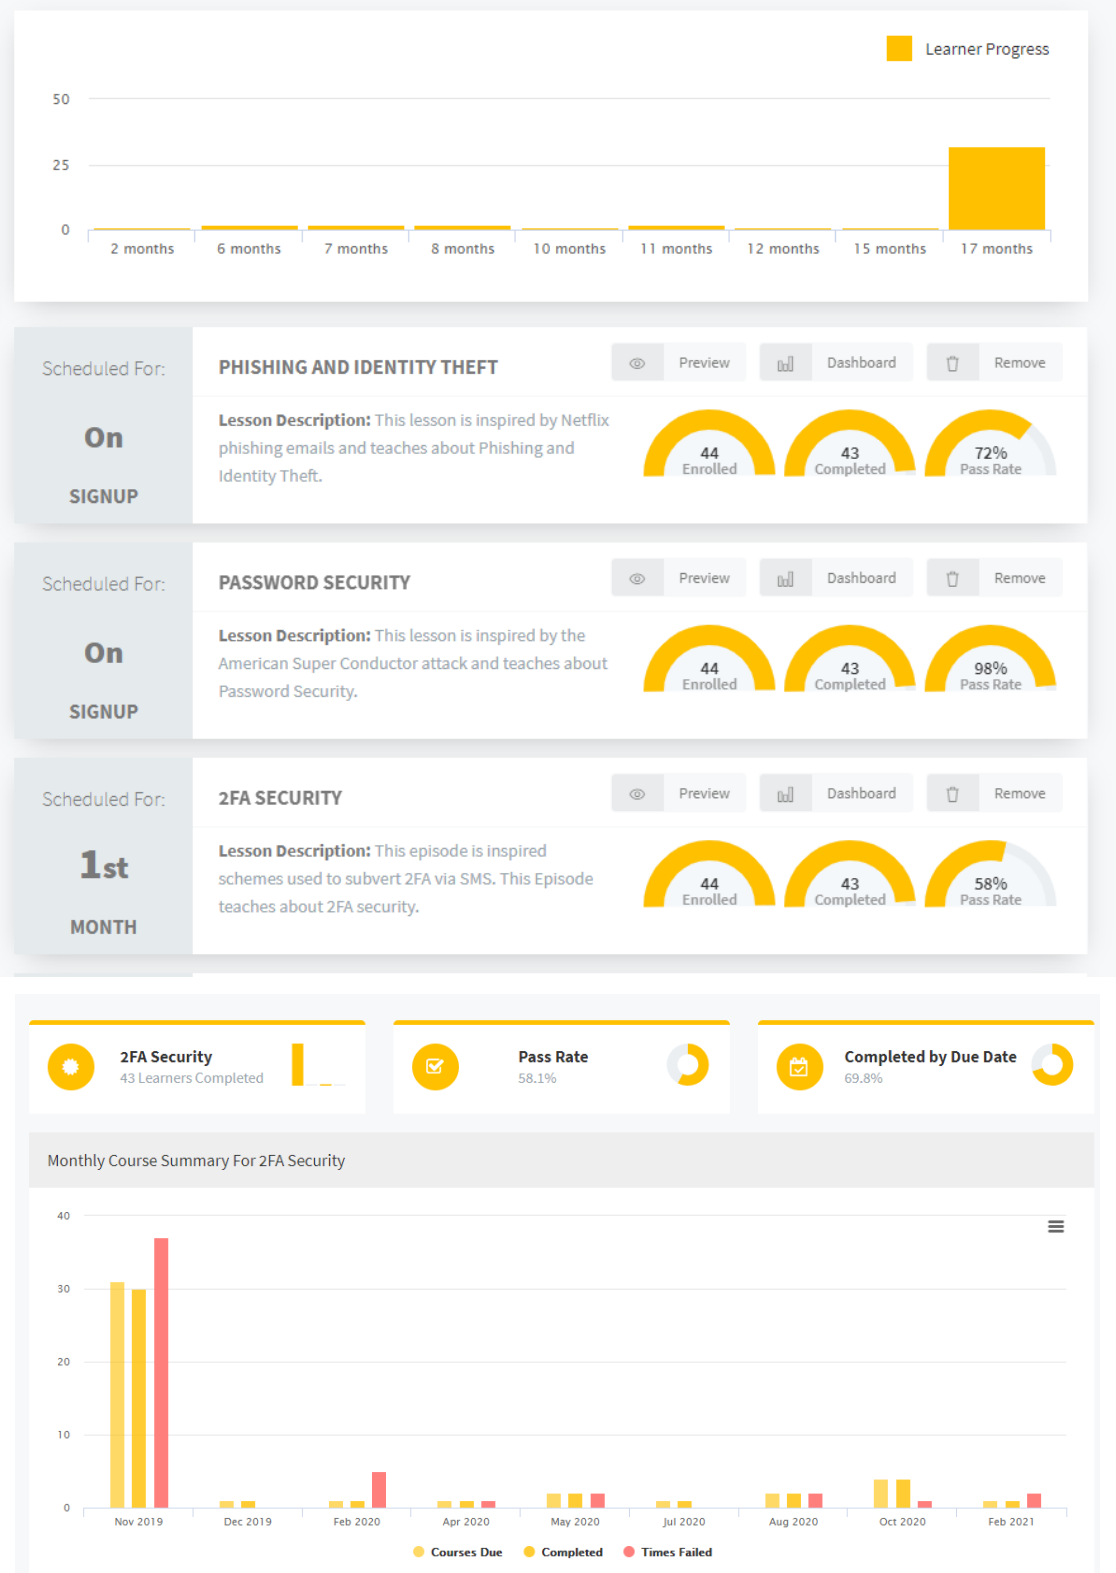

Nexon's cyber security platform also provides a portal to manage staff training programs and where training courses can be scheduled, tracked and test results monitored across the organisation. There are currently 65 training courses, with more added frequently, including:

Social Engineering	Your page is My page
Spear Phishing	You Never Call
Spear Phishing 2	Upvote, and Away
Password Security	It's Not What You Think
Ransomware	Say It, Don't Spray It
Public Wi-Fi Security	Vacation Devastation
Telephone Social Engineering	Blame Game
Watering Hole Attacks	SMS SOS

With additional compliance based modules also included that can be scheduled for staff:

PCI-DSS	GDPR
PCI-DSS (Episode One) - The Disinterested CEO	GDPR (Episode One) - A Regulated Ruse
PCI-DSS (Episode Two) - Just Scraping By	GDPR (Episode Two) - GDPR A.S.A.P
PCI-DSS (Episode Three) - Life's a Breach	GDPR (Episode Three) - The Silence of Compliance
PCI-DSS (Episode Four) - Payment Card	GDPR (Episode Four) - Regulation Rundown

Organisation employee results are published in real time dashboards and reporting.

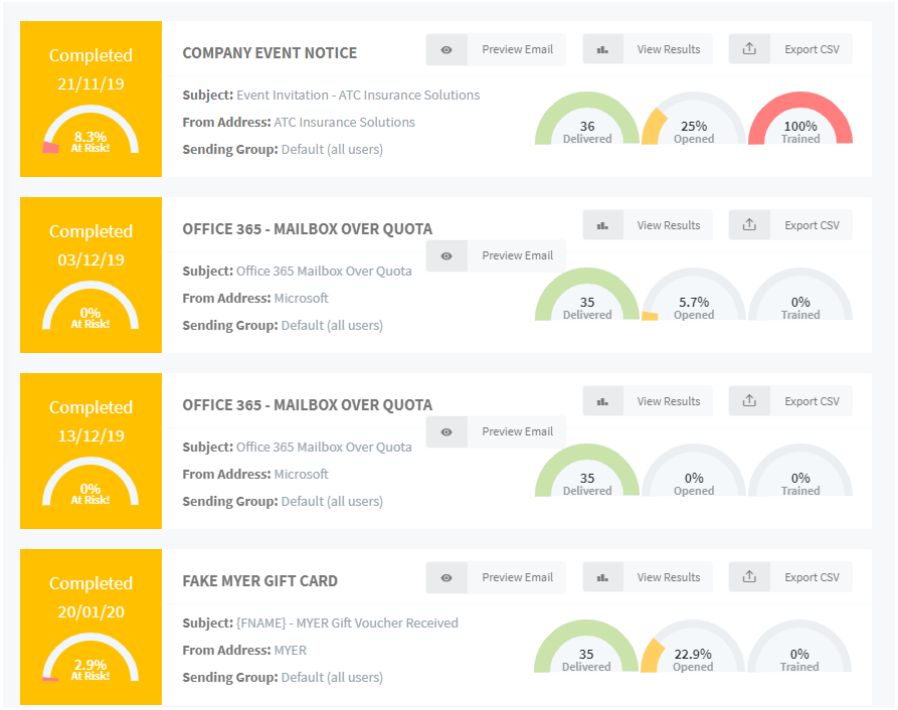

3.3.4 Phishing Simulations

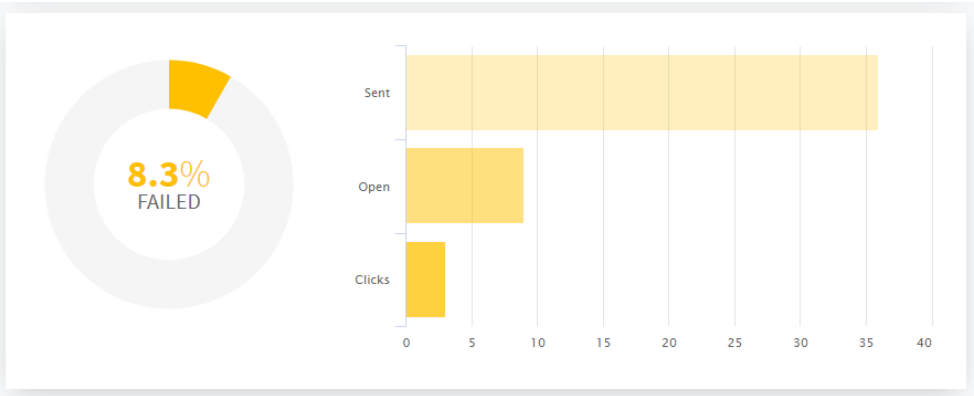

Nexon's cyber security platform provides a portal to generate and schedule phishing campaigns that our team has put together to match your organisation's needs. You can also build and craft custom email templates and campaigns. An example may be if the organisation received a phishing email, you could then take the email, recreate it in CyberAware and resend it to the staff. Additionally, you can edit any existing pre-built templates to suit your needs or create your own template(s) from scratch.

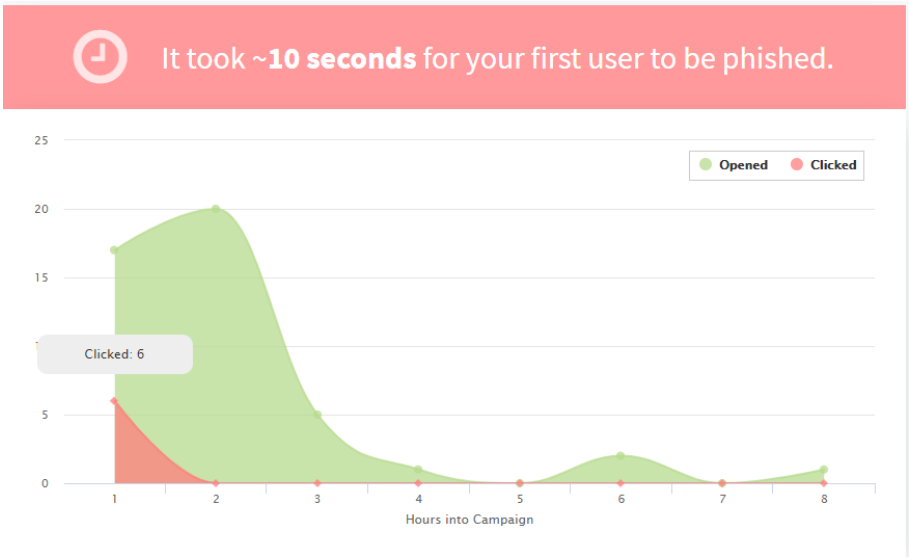

Each campaign is sent based on a scheduled date and time with the result available in real time. Out of the box a number of campaigns exist which include:

Template Name	Description
Google Password Expired	Google Apps password has expired and a request to reset the password within 72 hours
Netflix – Restart Your Membership	Netflix subscription has expired and a request to login and re-activate
PayPal – Suspended Account	PayPal has noticed suspicious activity and a request to login and stop a transaction.
Management Staff Bonus	Internal email from HR department with link to staff bonus attachment.
Apple – Account Suspended	Apple Account has been suspended for security reasons and request to click a link to verify
Microsoft – Unauthorised Access	Unauthorised access to Microsoft and request to login and verify activity
Google Apps – Mailbox Over Quota	Google mail account is over quota and they can click to get a free upgraded of storage.
Office365 – Mailbox Over Quota	Office365 mail account is over and they can click to get a free upgrade of storage
Fake Virus Alert	Fake virus alert from internal IT department requesting user click a link and remove virus

Campaigns are created and sent to end users. Detail reporting dashboards are provided to understand the level of awareness across the organisation.

3.4 Security Access Service Edge (SASE)

The proposed managed SASE solution Includes the following Key Components:

- A Cloud delivered security service that will provide centralised security functions for Home Instead users in the office or working remotely including, firewall, intrusion prevention, Secure Web Gateway and CASB.
- A client agent that will be installed on Corporate or Home devices that redirects internet traffic via Fortinet Secure Internet Gateway for security inspection and policy enforcement when users are roaming away from the network.
- Synchronised Enforcement of NobleOak firewall policies for users connected to the corporate LAN or working remotely.

The following diagram depicts the high-level topology for the proposed solution.

3.4.1 Solution Components

The CASB unifies firewall, SWG, CASB into a single cloud service and provides the following cloud native security sets.

- Secure Web Gateway

  Gain more control and transparency and shield your workers from malware and other dangerous attacks. The secure web gateway (SWG) is a full proxy that logs and inspects your organization's web traffic to deliver full visibility, URL and application-level controls, and advanced threat protection.

- Cloud Access Security Broker

  Expose shadow IT quicker and more efficiently. The cloud access security broker (CASB) detects and reports on cloud applications in use across your environment. Insights can help guide cloud adoption, reduce risk, and block the use of offensive or inappropriate cloud applications. CASB secures user identities, prevents accounts from being compromised, and ensures cloud-based data is safe from threats or loss.

- Cloud Delivered Firewall

  The cloud-delivered firewall provides visibility and control for all traffic across all ports and protocols. This could include mobile apps, peer-to-peer file sharing, collaboration (for

example, Webex or Zoom). It logs activity and blocks unwanted traffic using IP, port, and protocol rules (layer 3/4 firewall), application rules (layer 7 firewall), and intrusion prevention system (IPS) rules.

- Data Leakage Protection

  The FortiGate data leak prevention (DLP) system prevents sensitive data from leaving or entering your network. You can customise the default sensor or create your own by adding individual filters based on file type, file size, a regular expression, an advanced rule, or a compound rule. Once configured, you can apply the DLP sensor to a firewall policy. Data matching defined sensitive data patterns is blocked, logged, or allowed when it passes through the FortiSASE.

4 Contact Centre – ipSCAPE & Vonage Replacement

Nexon Asia Pacific (Nexon) is pleased to provide NobleOak with a response for the transformation of their existing ipSCAPE / Vonage Contact Centre environment to Genesys Cloud, an omni-channel cloud contact centre Managed Service. We thank you for considering Nexon as a potential partner as NobleOak continues with its cloud IT transformation journey. Nexon confirms that the information provided in this document is submitted by Nexon and is complete and accurate.

Nexon understands that NobleOak requires a solution that will greatly improve their Customers' experience, specifically via offering them the ability to contact NobleOak via any channel they like.

Primary Goals include:

- Migrate to a mature cloud contact centre and have the whole ecosystem managed as a service.
- Provide enterprise-grade security, scalability, and high availability.
- Deliver a future proofed platform which can offer an Omni-Channel contact centre with sophisticated routing tools.
- Improve NobleOak experience through better queue management tools, CRM integration, self-service options and additional contact channel options.
- Gain operational efficiencies through the use of Workforce Management and Quality Assurance tools combined with better reporting capabilities.

Based on these key objectives, it is clear that the time has come for NobleOak to establish a partnership with an organisation which is equally aligned to NobleOak's commitment to their customers. An organisation that is built on quality standards delivering managed services leveraging the most suitable and leading-edge cloud technologies such as Genesys Cloud CX. Ultimately these services will help transform NobleOak's current state technology to become a data driven platform to help NobleOak's leaders make informed and strategic business decisions today and well into the future. Nexon looks forward to the opportunity to demonstrate to NobleOak that Nexon is that partner.

Nexon's proposed managed service is the right solution for NobleOak because it offers the following benefits:

- One integrated platform. Nexon is one of only a very few Australian Managed Services Providers who can provide a complete Managed Service offering across every technology requirement. To deliver on NobleOak's Primary Goals Nexon is proposing the following Managed Service.
- Genesys Cloud CX for all customer facing NobleOak employees, configured to allow customers to interact in any way they like.
- The Genesys Cloud CX service will leverage Nexon's highly available, geographically redundant telecommunications SIP environment.
- One Managed Approach. Nexon will manage the entire transition and future rollouts as a single managed project with technical business owners across every single technology segment.
- One Invested and Accountable Partner. Nexon prides itself on our customer's happiness, our values, reputation, brand and people are centric to our organisation. Nexon's purpose-built customer engagement model (Happiness Model) is focused on hearing the voice of each individual end user good or bad as we strive to guarantee that each user experience is a good one.
- Let Nexon manage "keeping the lights on" so that NobleOak can focus on transformation. A multiple cloud environment can be a complex solution to manage. With Nexon's managed service NobleOak's leadership team can instead use the new cloud platform to focus on projects that directly provide benefit to NobleOak's employees and customers ensuring that NobleOak can grab "what's next" with ease.

4.1 Benefits of Nexon's Proposal

Nexon's proposed contact centre solution is the right solution for NobleOak because it offers the following benefits:

- Unique Skillsets. Nexon is one of only a very few Australian Managed Services Providers who can provide a complete Microsoft Unified Communications and Genesys Cloud CX Contact Centre managed service offering.
- Shared Risk with minimal upfront costs. Nexon will deliver a complete production environment and NobleOak pays only for what they use. Additionally, NobleOak have complete flexibility on the number of users on the platform on a month-to-month basis.
- No need for costly onsite hardware. Every core component of the solution is delivered in the cloud.
- Aligned with Phased Approach. Nexon's pay as you grow Commercial Model means NobleOak will only pay for users that are migrated to the Nexon Managed Service, allowing for a simple, cost effective easy to manage phased migration from the existing telephony platform.
- Nexon's track record. Nexon has successfully delivered Microsoft UC and Contact Centre managed services to a wide range of Australian Enterprises and Government Organisations including the Australian Digital Health Authority, IOOF, Pitcher Partners, Fox Symes, Craveable Brands and Noosa Shire Council.
- Let Nexon manage "keeping the lights on". With hardware, software, storage and communications requirements a Unified Communications service can be a complex solution to manage. With Nexon's managed service NobleOak's IT staff can instead focus on projects that directly provide benefit to NobleOak

4.2 Solution overview

The Nexon solution involves the industry leading contact centre platform Genesys Cloud CX integrated into NobleOak's environment. The integrations provided include Dynamics for CRM. Overlaying the solution are Nexon's managed services and AnySIP voice carriage services.

4.2.1 Nexon Managed Services

Nexon managed services encompass all NobleOak's requirements. Specifically, Nexon Managed Services cover:

- **Genesys Cloud CX Managed Service.** The Nexon managed services include Genesys agent licensing as well as 24 x 7 support and maintenance services.
- **SIP Trunks via Nexon AnySIP.** Highly available, geographically redundant SIP services delivered to NobleOak via either the Internet or a Nexon managed network interconnect. Importantly Nexon AnySIP will allow NobleOak to keep their existing numbers and deliver new ones where required.
- **Headsets and Handsets.** Nexon partners with Poly, Jabra, AudioCodes and Yealink for Headsets and Handsets and can propose a range of options based on user requirements.

4.2.2 About Genesys Cloud CX

Genesys Cloud CX is a web-based suite of cloud services for enterprise-grade communications, collaboration, and customer experience management. Genesys Cloud CX is built on top of AWS and uses a distributed cloud environment that provides secure access to organisations around the world with a marginal IT footprint.

Genesys Cloud CX incorporates a sophisticated contact centre functionality that handles every aspect of customer interaction, including speech-enabled interactive voice response (IVR); automatic call distribution (ACD); skills-based queuing and routing of interactions; recording and archival of all interaction types; real-time monitoring and supervision; insightful data analytics; and much more.

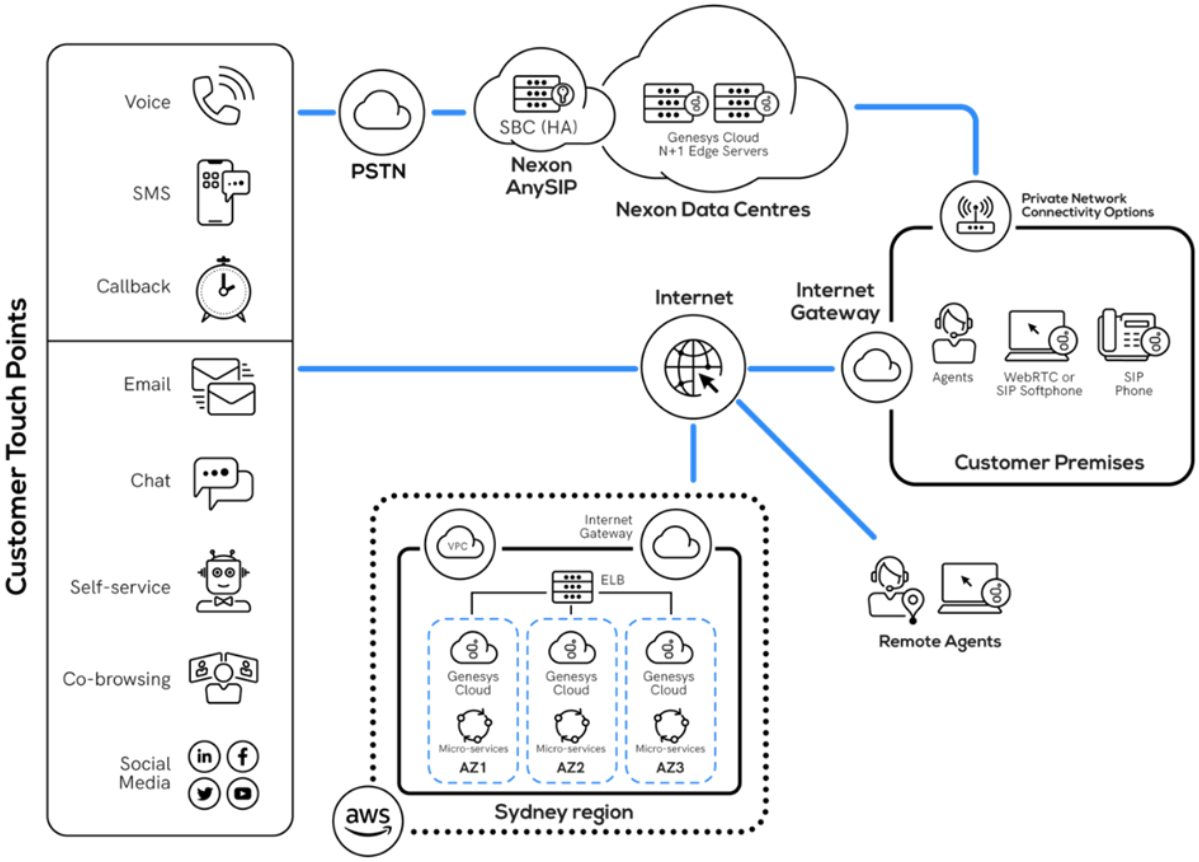

- **Call agent interface:** Call agent features for handling customer interactions include consult transfer, web chat, queue status, wrap-up codes, ACW, scripts, canned responses, co-browse, screen share, performance dashboards and agent assistance.
- **Contact Centre Management:** Contact centre managers have the ability to configure and manage the solution including queues, agent status, presence and activity indicators, interaction routing, canned responses, and threshold alerts.
- **Automated Attendant:** Contact centre managers have the ability to configure and manage auto attendant functionality including working with inbound and outbound call flows, call prompts, audio resources, DTMF menus, speech recognition and language support.
- **Genesys Cloud CX ACD:** Genesys Cloud CX ACD dynamically matches customer criteria and agent attributes. Bullseye matching sends a customer to a specific agent based on a match between the customer's needs and the agent's skillset. If an exact match isn't available, the level of matching required is reduced until an available agent qualifies.
- **Outbound dialling:** Outbound dialling campaigns dial phone numbers automatically according to a prescribed set of rules and leveraging contact lists. Campaigns increase agent productivity by screening out answering machines, busy signals, and non-completed calls.
- **Scripting:** Administrators use the script designer to create specialised instructions that help agents handle specific types of calls. Scripts present details about a caller or contact to the agent, often with fields for collecting or updating information. Scripts help ensure consistent handling of interactions.
- **Real-time Supervisor:** The solution provides supervisors and managers with a view of real-time metrics for their call centre, including a dashboard with graphical information display, alerts and notifications, real-time call monitoring, and agent assistance requests. Additionally, Genesys Cloud CX generates reports on interactions that give insight into the efficiency of the customer service process. Reports show how well customer service representatives are performing their duties and how well they serve customers.
- **Workforce Management:** The solution provides contact centre managers and supervisors with full featured WFM functionality including creating forecasts and schedules to support service level goals along with agent time-off requests, real-time and historical adherence, and intraday monitoring.
- **Quality Management:** Quality management is the process of recording and scoring contact centre interactions to improve the customer experience. By evaluating and scoring conversations, a quality team can identify performers who should be given positive feedback, agents who need additional training or coaching, and situations that merit modification of call scripts.
- **Integrations:** Genesys Cloud CX provides for integration at multiple levels including the use of embedded clients to common cloud CRMs, data actions to third party systems, web services for data dip, synchronisation to external contacts and catalogue of third-party integrations for WFM, speech analytics and more.

A more extensive description of Genesys Cloud CX architecture and functionality can be found in the provided document "Nexon Genesys Cloud Overview for NobleOak".

4.2.3 Solution Architecture

The Genesys Cloud CX suite of application services are based on a distributed cloud architecture built atop AWS. It is designed to provide rapid deployment, maximum reliability, and unlimited scalability, all while connecting customers and employees in new, more efficient ways. All Genesys Cloud CX applications, interfaces, and management tools have been created using the latest web design methods for maximum ease of use.

As a Genesys' Gold partner, Nexon's expert knowledge in carriage, cloud and managed services enables us to provide a unique architecture, delivering a complete end-to-end solution in the cloud including SIP trunks, network connectivity and managed services options.

4.2.3.1 High Availability Architecture

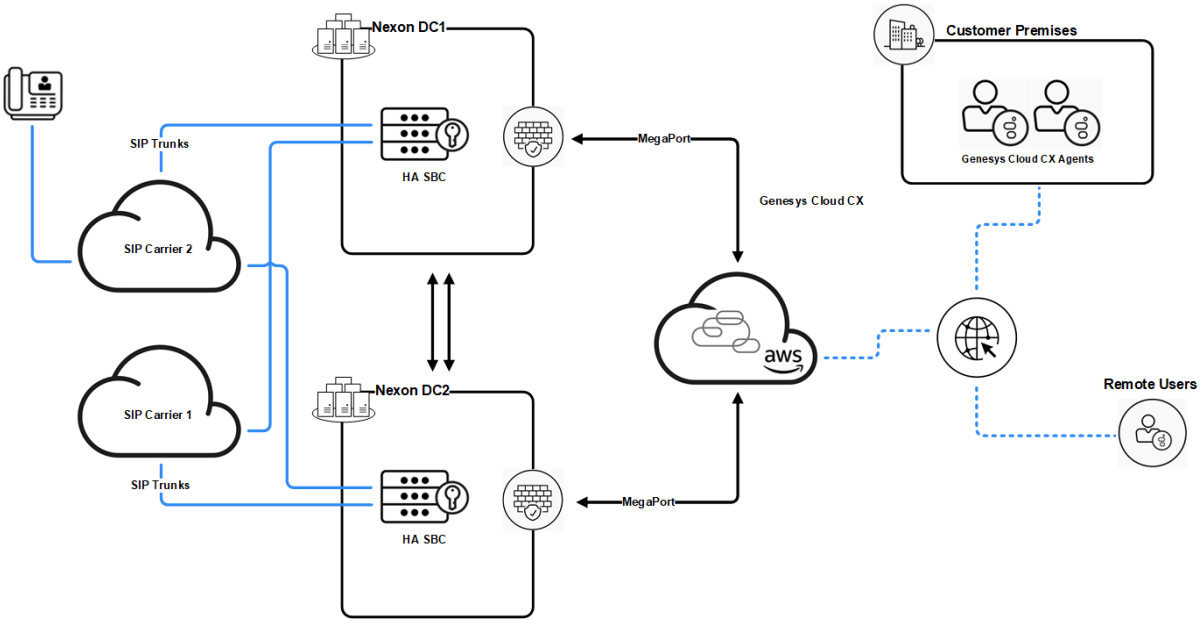

A key element of the overall Genesys Cloud CX contact centre solution is the delivery of voice calls from the PSTN to the users of the solution. Nexon will deliver the SIP based carriage services for the solution leveraging our cloud hosted Session Border Controllers which terminate the carrier services and deliver the SIP calls to the Genesys Cloud CX platform in AWS. This solution leverages the BYOC-Cloud (Bring Your Own Carrier – Cloud) feature within the Genesys Cloud CX solution.

Nexon Session Border Controllers are installed in active/passive pairs within each Nexon Datacentre. Datacentres are geographically dispersed within Nexon's network. Datacentres operate in an active-active manner, allowing calls to be dispersed across both datacentres during normal operation.

In the event of a failure of one datacentre, calls continue to route via the other data centre. No administrator action is required.

In addition to the High Availability / Geo-redundant architecture of the Nexon carriage services Carrier Services will be delivered using two independent carrier providers. Each carrier is terminated to both of our geographic redundant Data Centres. In the unlikely event of catastrophic failure of the primary carrier NobleOak would be able to seamlessly make outbound calls and take inbound 18/13/1300 calls through Nexon's backup carriers.

Calls from our data centres are delivered to the Genesys Cloud CX platform in AWS over two MegaPort connections with quad IP transits as backup.

This unique architecture allows Nexon to provide end-to-end unified communication and contact centre Managed Services to our customers including:

- 100% CCaaS in the cloud with no physical equipment to be hosted at NobleOak's premises.
- Internet friendly technologies to support remote users.
- Nexon Managed Services to monitor and manage the availability and redundancy of carrier services and the Genesys Cloud CX solution.
- A highly available SIP infrastructure leveraging multiple carriers and dual data centres.
- Tight security control, interoperability and internal communication routing across Genesys Contact Centre, MS Teams and legacy PABXs.

4.2.4 Core Solution functionality

Nexon will work with NobleOak to configure the core Genesys Cloud CX functionality. Nexon appreciates that delivering a modern contact centre solution with its enhanced functionality is not conducive to a "big-bang" approach. To minimise risk and ensure that users are able to adapt to the changing contact centre environment Nexon advocates a phased approach to deployment with the initial phase at a minimum replacing current capabilities. Further phases would then build on the core functionality adding new modules at a pace suitable to NobleOak. For Genesys Cloud CX the following functionality will be delivered:

- Nexon AnySIP trunk configuration with Genesys BYOC Cloud deployment.
- Inbound Voice queues (ACD)
- IVR
- Call-Back and/or voicemail in queue
- Custom Agent Scripts
- Outbound Voice (manual) dialling
- Supervisor functionality including Dashboards and Standard Reports
- Call & Screen Recording
- Configure Quality Management
- Configure Active Directory / SSO Integration

Additional Components of future phases:

- Outbound Voice Campaigns
- Email Routing
- SMS Routing
- Webchat / Chatbot
- Social Media Direct Message routing
- Post Interaction Surveys
- Speech Analytics
- Workforce Management

4.2.5 SIP Trunk Integration

If NobleOak's number ranges are already hosted by Nexon, migration of users' numbers to Genesys Cloud CX will require no porting time and can be performed on an ad-hoc basis.

Nexon can arrange the porting of any numbers or number ranges owned by NobleOak to the Nexon AnySIP service during cutover to the Genesys Cloud CX service.

If new number ranges are purchased from Nexon, they may be assigned to users immediately. Porting in of number ranges varies, with some carriers providing a sixty (60) day lead time requirement.

When users are physically located offsite but connected to Genesys Cloud CX, they can receive calls to their office number at no additional cost (unless they are diverting the call to an external number) via their Genesys Cloud CX client. Call costs on the SIP Service are indicated in the financial section.

External calling via the Nexon AnySIP service will provide the Direct In-dial number (DID) for the user's extension by default, Nexon can manipulate all or specific groups of extensions to change the CLID (i.e., to a hunt number or reception) or suppress the number (Private number display).

4.2.6 Nexon Absolute Fax (Optional)

Nexon's AbsoluteFax service provides a software-based fax solution integrated into your email service. Nexon will configure the service, including initial account(s) and phone number(s) to enable Contact Centre Proposal users to utilise the service and Administrators to manage the service.

- Emails addressed as <number>@absolutefax.com.au and will be converted and sent as fax pages. Standard Office files and Image formats can be sent as attachments. Acknowledgment emails will be returned with status of the fax to the senders' SMTP address.
- Faxes received on the assigned number will be forwarded as TIFF/PDF attachments to the associated SMTP address for the account.
- Nexon does not retain any fax or emailed materials other than calls metadata and statistics.

5 Transition & Onboarding

5.1 Project Management and Transition Plan

A project manager will be allocated to monitor and manage the overall delivery using a mixture of Prince 2 and Agile methodologies, the Nexon project team are able and have previously delivered utilising both frameworks.

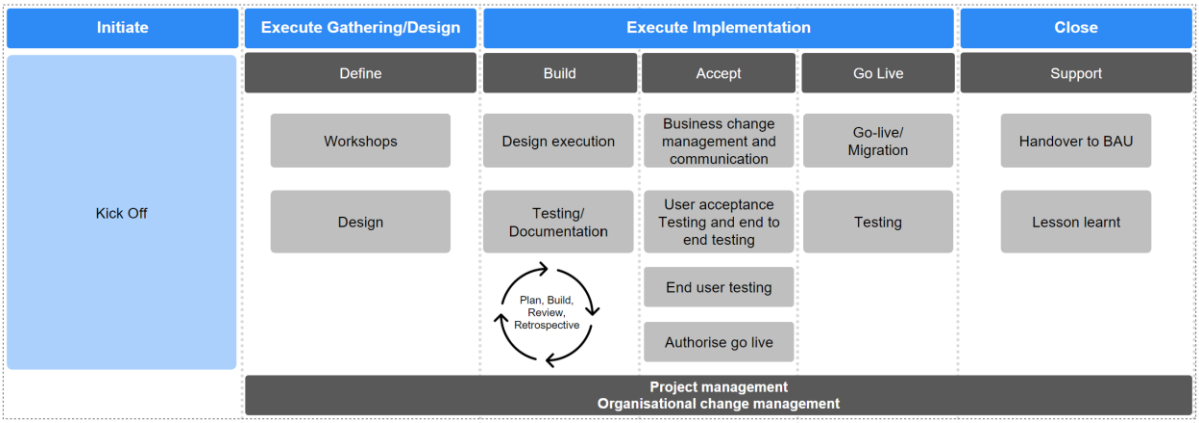

Figure 1. ***Agility and adoption are critical in our ability to manage business needs and priorities.***

Nexon's Project Methodology is based on the following principles:

- Continued business justification
- Learn from experience
- Defined roles and responsibilities
- Manage by Stages
- Manage by Exception
- Focus on Products
- Tailor to Suit NobleOak's Environment

The project management regime will be owned and closely managed by the Nexon Program and Project team, Product Leads and NobleOak's Senior stakeholders in order to not lose sight of the business rationale and business project goals and objectives. The Project objectives will be clearly identified within the Project initiation document which will require NobleOak approval and input.

The Nexon project manager will chair and maintain the actions, issues and risk register which is presented and reported on weekly to maintain clear visibility on the project status. Weekly status reports will be shared to the NobleOak stakeholder team.

- Schedule and chair Project Kick off
- Establish regular Project Progress meetings and reporting
- Detailed planning
- Develop Project Schedule
- Develop Project Initiation Document
- Develop Project Highlight reports
- Monitor and control project

The project initiation stage will deliver two key artefacts to manage scope and delivery. A project schedule will be presented with key milestones including dates, and dependencies. A project initiation document will be created and presented to NobleOak for approval.

Regular Progress meetings are conducted, these are held weekly to review the progress of the Project. The purpose of the weekly meetings is to discuss the status of products, activities, issues, actions, decisions, risks, changes and identify tasks for the following period.

The information gathered from this meeting is to be used by the Project Manager to develop the Highlight Report. A copy of the Highlight Report is sufficient to act as an agenda and minutes of this meeting. The Project Highlight Report is to be developed following this meeting and submitted to the Project Board and Project Team.

The Project Highlight Report will contain:

- An update on the progress achieved during the reporting period against the activities defined in the agreed schedule for that period;
- Summary of activities to be undertaken during the next reporting period;
- The status of products;
- Project completion progress
- Updated Project Controls Register containing the Issues Register, Quality Register, Risk Register, Invoicing; and
- Details of any problems or issues encountered during the period and the actions taken or proposed to resolve those issues.

Nexon's Project Team will use various tools and systems to monitor and maintain the project life cycle, in addition weekly meetings with the project stakeholder to maintain project progress and status. The team will also utilise Microsoft Teams channels to upload and share project content as a form of real time communication with the extended project team.

5.1.1 Project Management Scope of Works

5.1.1.1 Project Initiation

- Project initiation administration tasks
- Track product procurement and factor into resource booking
- Draft scheduling of project delivery team

5.1.1.2 Project Planning

- Compile Project Management Artefacts:
  - Project Initiation Document, which includes:
    - Scope of Works and Service Conditions
    - Communications Plan – NobleOak, Nexon and 3rd Party project team contacts.
    - Quality Control – references to Acceptance Criteria, Issues Log, Risk Log
    - Schedule – reference to the Project Schedule
    - Financial
      - Re-presentation of the financial data from the Quote/Tender response.
      - Proposal for a Payment Plan if one has not been previously agreed.
    - Custom Terms & Conditions, or reference to the Standard Terms & Conditions
  - Project Schedule Gantt Chart in MS Project format.
  - Acceptance Criteria (Commissioning Certificate)
  - Risk Log
  - Issues Logs
  - Meeting Minutes
  - Project Status Report
- Schedule bookings.

Deliverable

- Completed Artefacts required for project execution and governance.

5.1.1.3 Project Execution & Delivery

- 1 x 1.5hr Project Kick-off Meeting to communicate the scope of works. Meeting Agenda:
  - Review of Project Initiation Document – Scope, Communications, Quality, Financial
  - Presentation of initial schedule
  - Conduct Risk Analysis
  - Agreement on acceptance criteria.
  - Scheduling of update meetings.
- Up to 3 x 2hr Technical Workshop sessions
- 1 x 2hr Design presentation session.
- Up to 1 x 1.5hr for 3rd Party & Project Team coordination for each full week (per 38hrs) of planned Engineering Effort.
- 1 x 1hr NobleOak update meeting for each full week (per 38hrs) of planned Engineering Effort. Meeting agenda:
  - Progress/Status update
  - Action Items
  - Issues/Risks
  - Reminders or noted items.
  - Upcoming activities including scheduling meetings.
- Additional Activities
  - Up to 4 x 15min Stand-Up meetings for pre-implementation readiness assessment and go/no-go decisions.

Deliverables

- One-off
  - Agreed and accepted Project Initiation Document, Schedule, Risk Log & Acceptance Criteria.
  - Meeting Minutes for Kick-off and Workshop
- Weekly
  - Project Controls Workbook in published location accessible to NobleOak
  - Confirmation of scheduling of Project Delivery team
  - Basic RAG reporting
- Fortnightly
  - Update of Project Schedule with task progress

5.1.1.4 Project Closure

- Closure meeting
- Project closure administration activities

Deliverable

- Commissioning Certificate/Completion Certificate

5.2 Scope of Work / Professional Services

Nexon will perform the following scope of work(s) for NobleOak as part of this proposal:

5.2.1 Kickoff

- Facilitate kick-off to engage with Nexon's Consultants with NobleOak's stakeholders:
  - Introduce project team and NobleOak representatives.
  - Validate requirements and scope, priorities, and agree on any necessary variation.
  - Gain understanding of inflight projects and NobleOak's third parties that need to be involved in in the project.
  - Gather the various contact details of stakeholders, contributors, vendors and third parties that may be involved in the project.
  - Gather management interface addresses and initiate the granting of administrative access required to facilitate the migration to Nexon resources.
  - Confirm NobleOak has initiated the process to transfer CSP billing from the current partner to Nexon.

5.2.2 Migration to Azure

Nexon will deliver the professional services described in the following subsections to migrate NobleOak's existing workloads to Microsoft's Azure public cloud.

5.2.2.1 Design and Planning

The following described the scope of the professional services that Nexon will deliver to migrate NobleOak to the Microsoft Azure cloud:

- Perform high-level technical review of the following with assistance from NobleOak and their third parties (engaged by NobleOak as required):
  - Current network architecture, internal and external connectivity.
  - Datacentre networking and security segmentation.
  - In-scope virtual machine workloads, operating systems, MSSQL databases, Microsoft licensing needs
  - Existing backup data for VM workloads and Microsoft 365.
  - Existing Microsoft Azure subscription(s), architecture, services and workloads.
  - M365 licensing services including but not limited to Exchange Online and Intune.
  - Microsoft Entra (Azure AD) and Active Directory.
- Facilitate high-level technical workshops to enable the design and implementation planning, covering:
  - Understanding the needs for the Azure architecture, such as
    - The Azure cloud landing zone architecture for the workloads being migrated.
    - Integration with the existing Azure workloads.
  - Network integration architecture and segmentation considering the:
    - Head office and remote end users.
    - Existing Azure environment.
    - New Azure needs of workloads being migrated.
    - Temporary requirements for workload migration.

- Backup and Disaster Recovery Requirements, including:
  - Workload recovery ordering and priority.
  - Communication plan, roles and responsibilities.
- Transition from the current M365 licensing model to M365 Business Premium
- Log management and change auditing requirements for specific workloads, such as those for which applications are managed by third party developers.
- Enabling alerting for PII on Emails received in M365 user mailboxes.

- Facilitate hi-level migration planning workshop to discuss:
  - Preferred approaches to cloud integration and workload migration.
  - Introduce the tooling that will be used and discuss requirements for access to deploy it.
  - Capture workload migration and startup ordering.
  - Identifying application services that should be stopped prior to initial synchronisation at cut-over time.
  - Communications plan for the engagement of and collaboration with third parties, such as those needing network connections to be migrated or change or who may need to test function of system integrations following cutover.
  - Engage NobleOak representatives to begin developing their User Acceptance Testing plan to validate appropriate function of migrated applications and their integration with other systems and services (both internal and external).
    - *Please note that UAT planning, and the execution of the test plan following migration, will remain NobleOak's responsibility. This UAT plan is critical to validating the cutover following workload migration. Nexon will require evidence of baseline testing with detailed results recorded prior to initiating cutover activities.*
- Document a high-level design based on the outcomes of the workshops and the proposed lift and shift migration of current virtual server workloads as well as the transition of Public DNS and IP addressing to Azure.
- Present high-level design in workshop format, discuss high-level design decisions and agree on any options or required changes.
- Develop configuration-level design along with both the implementation and migration plan for relocation of DNS, IP Addressing, VM workloads and third-party connectivity.
- Publish Design and Planning documentation to NobleOak for review and seek agreement on their content before proceeding to build the solution to the agreed design.

It is noted that with the benefit of the agreed design, and in parallel with the initiation of the build, Nexon will proceed with Transition Planning for the cloud services, in collaboration with NobleOak stakeholders and third parties as required.

5.2.2.2 Build, Implement, Migrate and Transition to Operational Management

Following agreement with NobleOak to proceed based on Nexon's design and planning deliverables Nexon will implement the solution and complete the migration. Each newly implemented component will be transitioned to the relevant managed services following deployment to ensure they are appropriately monitored and maintained.

The key implementation activities prior to migrating the workloads include:

- Transition M365 licensing for all users to Business Premium.
- Enable Defender for M365 on user accounts and active shared mailboxes.
- Enable DLP scanning for credit card details across data stored in M365.
- Building the Microsoft Azure subscription and virtual networks in both the Australia East and Australia SE regions to support the in-scope virtual machines
- Deploying and configuring the virtual FortiGate firewalls in each Azure region and the physical FortiGate firewall in the head office to enable secure connectivity between each of the three primary locations and the existing Azure subscription. These firewalls will also enable secure segmentation of networks in each location.
- Temporarily configuring replication networking, over the internet via VPN or otherwise as defined by the migration plan.
- Deploying new Active Directory servers and monitoring collectors in each Azure region in preparation for cutover and monitoring enablement.
- Preparing the migration tooling and initiating data replication from the existing service provider's cloud to Microsoft Azure.
- Implement Nexon M365 backup as a Service for M365 users and Exchange Online mailboxes.

With the cloud and networking architecture in place and the data replication ready to cutover Nexon will schedule an outage on a weekend to complete the transition out of the existing Managed Service provider.

During a scheduled outage the cutover will involve:

- Stopping relevant application services for in-scope VMs and completing a final replication synchronisation of each workload prior to cutover.
- Cutover each workload, suspending the existing VM such that it can be quickly re-enabled should a failback be required.
- Complete post-cutover tuning of each VM per the migration plan, activities completed here might include activities such as:
  - Removing VMware tools, existing security, monitoring, and management tooling from the third party, etc.
  - Optimising the VM for operation in Microsoft Azure.
  - Deploying new security, monitoring and management tooling required by Nexon.
- Enable supporting services per the migration plan and designed specification for each cutover VM, while other workloads continue to be cutover, these include:
  - Initiating operational monitoring and configuring appropriate thresholds for alerting.
  - Configuring audit logging on workloads that require it.
  - Initiating log management and associated security management services.
  - Configuring backups with Azure Backup.

- Configuring Disaster Recovery to the secondary region with Microsoft Azure Site Recovery.

- To validate the VM cutover is successful the following activities will occur:
  - Starting applications and enabling network connections to third parties.
  - Nexon will complete System Acceptance Testing to validate that virtual machines are operating as expected, that all required tooling has been deployed and associated services are operational.
  - NobleOak will complete initial User Acceptance Testing to validate that all applications, services, and systems are operating as expected, with the exception of external connections and integrations.
    - Where minor issues are encountered they will be addressed on the fly within available time constraints.
    - If initial UAT is successful:
      - Nexon will progress to transitioning 3rd party connections.
    - If initial UAT is unsuccessful:
      - A roll-back may be required. This will be relatively simple as the workloads will at this point still remain on the existing providers platform and third-party connections have not yet transitioned.
        - Resuming VM operation in the existing service provider's cloud following the startup order identified in the migration plan.
        - Re-running System and User Acceptance Tests to validate function.
  - Following successful initial UAT Nexon will transition 3rd party connections currently terminating in the tenancy of the existing provider's cloud to the new Azure tenancy. Once cutover:
    - NobleOak will complete final testing to validate that external systems and integrations are working as expected.
    - Where minor issues are encountered they will be addressed on the fly within available time constraints.
    - If final UAT is successful:
      - The cutover will be deemed completed.
    - If final UAT is unsuccessful:
      - a roll-back may be required. This will initially require network connections to be transitioned back to the existing cloud provider's tenancy followed by:
        - Resuming VM operation in the existing service provider's cloud following the startup order identified in the migration plan.
        - Re-running System and User Acceptance Tests to validate function.
  - If the UAT is successful, the migration will be deemed successful, and the temporary migration connectivity disabled.

5.2.2.3 Stabilise, Optimise and Close

Following successful cutover Nexon will operate the workloads as is for one full month. During this month stabilisation period, Nexon will:

- Adjust design documentation to reflect the solution as built.
- Gain familiarity with NobleOak's environment and personnel.
- Bed-in services and tune monitoring thresholds.
- Continue to develop the knowledge base relating to the in-scope services, systems, and workloads.
- Review the migrated workloads an identify those that may be over or under-sized as well as those that may require higher performing storage or may suit lower performance storage.
- Review options to optimize licensing of Microsoft Windows Server and MSSQL Server by transitioning to CSP subscriptions to leverage Azure Hybrid Benefit
- Plan the following transformation and optimisation activities:
  - Recommended adjustments to VM and storage configurations, seeking approval to implement changes for the purposes optimising service quality, availability, performance, and cost.
  - Automated shutdown for Dev Server between 7pm and 7am on business days and over weekends
  - Transition from Windows Print server to Printix cloud print services.
  - Microsoft Intune and Defender for Corporate endpoint devices.
  - Cleansing of short-term legacy backup recovery points transferred from the existing provider to Azure Blob.

After the stabilisation period Nexon will implement the planned optimisation activities:

- Implement agreed changes to VM instances and storage tiers to plan, in scheduled outages if service disruption is likely.
- Following instance adjustments, assuming performance remains suitable, reserve VM Instances that are not expected to require any change in compute capacity for the first 8 months of operation.
  - This will reduce the 12-month costs for the relevant VMs by approximately 40% for those workloads reserved for 12 months, as such so long as they stay the same for at least 8 months a saving will be achieved.
  - With ongoing transformation programs, Nexon doesn't recommend longer reservation terms except for workloads that are archive in nature, maintained only for accessing historical data and known to be required for the longer term with no change expected.
- Automate shutdown of Dev and UAT Servers overnight (7pm-7am) and on weekends on Weekends
- Implement Microsoft Intune and Defender for Corporate endpoint devices to plan.
- Transition from Windows Print server to Printix cloud print services.
- Cleanse agreed short-term recovery points from the migrated legacy backup data as agreed.
- Update as-built documentation and knowledge base.

5.2.3 Migration to Security Services

5.2.3.1 Nexon Security Operations Centre

5.2.3.1.1 Planning and Design

The objective for this step is to plan all the activities, agreed resource requirements, timescales, and discuss all the technical considerations that need to be factored in, to de-risk the deployment whilst at the same time not losing sight of the business objectives.

To achieve a successful outcome, Nexon will document the agreed scope of platforms and assets to be covered under the service and note their network location as well as their context and function. Existing processes will be documented as well as design documentation drawn up for the new service.

This phase includes workshops where relevant business and/or technical stakeholders, and service management consultants would come together to agree and plan the following types of areas:

- Timescales for the project deployment and agreed milestones.
- Identification of relevant operational teams whose assistance would be required to provision access to the technical data sources.
- Technical integration requirements for all the technical data sources in scope. This may involve further calls/workshops with the system owners to agree the most appropriate integration approach with each source.
- Discuss architectural considerations such as location of virtual appliances, network zoning, firewall rule changes that need to be provisioned to allow communication.
- Discuss communication strategy such as agreed escalation plans and communication templates.
- Gather detail relating to NobleOak corporate environment.
- Confirm and agree upon Incident response process.
- Develop designs for connectivity, integration and Incident Response support requirements
- Finalised Scope document and share with NobleOak.

5.2.3.1.2 Implementation and Deployment

The objective of this phase is to establish and prepare the Nexon SOC, SIEM and vulnerability management toolset and to establish integrations and data collection from in-scope systems and infrastructure. Often this phase can begin in parallel with planning and design and finalised upon approval of the agreed scope and design. Activities included in this phase include:

- Establish NobleOak Tenancies within Nexon SOC toolset.
- Establish connectivity protocols between NobleOak
- Complete API Integrations with cloud based platforms.

5.2.3.1.3 Validation and Optimisation

Once the integration is complete, functional testing of the various technology integration points is undertaken to ensure that all systems are operating as expected such as relevant alerts are being correctly generated and that intersystem communication is occurring successfully.

Also undertaken as part of this stage is simulated high priority incident testing to ensure that all teams have the correct communication, escalation, and response plans in place before transition is complete.

Any deficiencies in technology or process are adjusted and tests are re-run until all parties are satisfied. Activities in this phase include:

- Validation of Microsoft Defender for Endpoint console for coverage and endpoint detection and response.
- Validation of Elastic SIEM console for data source monitoring and data ingestion

- Tuning and optimisation of data collection and alerting
- Tuning and validation of altering from devices
- Complete simulated incident testing and validate Incident response processes

5.2.3.1.4 Service Transition

The final stage of onboarding is the transition from onboarding to BAU where the service is run with an elevated level of hyper care to ensure any issues that arise are remediated with the highest priority.

During this time the level of interaction between the teams is high as the service is bedded in and Nexon ensures that all NobleOak expectations are met. Activities in this phase include:

Activities for this phase include:

- Development and handover of NobleOak facing dashboards
- Development of As-Built Documentation
- Finalisation and approval of incident response plan
- Execution of Incident Response Tabletop exercise of multiple scenarios

5.2.3.2 Vulnerability Management

5.2.3.2.1 Vulnerability Management Service Onboarding Approach and Methodology

One of the most important considerations when onboarding a Vulnerability Management Service is comprehensive planning and preparation which leads to a smoother execution of the initiative and delivery of the service.

There are several main steps involved in service deployment and onboarding. These are described below:

5.2.3.2.2 Planning

The objective for this step is to plan all activities, agree on resource requirements, timelines and any additional discussions on the technical considerations that need to be factored in to de-risk the deployment whilst at the same time, not losing sight of the business objectives.

This phase is normally conducted within a workshop (or series of workshops) where relevant business and/or technical stakeholders, service management professional services consultants would come together to agree and plan the following types of areas:

- Timelines for the project deployment and agreed milestones;
- Identification of relevant operational teams whose assistance would be required to provision access to the technical data sources;
- Technical integration requirements for all the technical data sources in scope. This may involve further calls/workshops with the system owners to agree the most appropriate integration approach with each source;
- Discuss architectural considerations such as location of scanners, network zoning, firewall rule changes that need to be provisioned to allow communication.

5.2.3.2.3 Documentation

In order to achieve a successful outcome, Nexon will document the agreed scope of platforms and assets to be covered under the service and note their network location as well as their context, function, asset owner and group. Existing processes will be documented as well as design documentation drawn up for the new service.

5.2.3.2.4 Deployment

Often deployment can start in parallel to the documentation phase, or immediately thereafter if the documentation phase is short. The following items are normally completed during the deployment phase:

- Nexon virtual Oversight appliances are provisioned into the datacentres;
- Nexon virtual Oversight appliances configured to support the solution and service delivery objectives;
- Provision of Microsoft Vulnerability Management Solution;
- Provisioning of Customer's Vulnerability Management Portal;
- Deployment of scanning agents through centralised management tool. (if required)

5.2.3.2.5 Integration

After technical deployment has completed the integration effort begins. The following areas are typically undertaken during this process:

- Integration between on premise scanners and cloud based vulnerability management portal;
- Any SIEM or syslog integration work;
- Configure ITSM for new NobleOak environment, set up automation triggers, tasks and service workflows;
- Team integration.

5.2.3.2.6 Configuration and Scan Baselining

Once the integration is complete, we can then start with the technical configuration of the platform. Often, the configuration can take place in parallel to the integration phase. The following items are those typically undertaken during configuration:

- Configuring the management portal. The portal can be configured to group assets and assign asset owners to ensure vulnerability reports go to the correct asset owners. Asset owners will be able to access their asset's vulnerability data within the portal to run custom queries to ensure they have the correct information to remediate risks and discovered vulnerabilities.
- Asset classification. The most critical hosts and devices will be determined by holding meetings and interviews with key staff members and asset owners to help identify critical systems and systems storing sensitive or personal information of clients, and systems required for BAU. Any past risk assessments may also be analysed as well as any documentation which may assist in this process. The remaining systems will be categorised based on the results of our discovery and vulnerability scans and taking into account factors such as whether the host is public-facing, whether it is running sensitive software or hosting management interfaces. These factors help in determining risk scores for discovered vulnerabilities to present the most critical vulnerabilities to asset owners in a prioritised manner.
- Baseline Scanning creates initial inventories and a baseline of the current security posture of the environment. A range of tools may be used to perform this task based on the requirements or existing toolset employed by the organization if required.
- Scheduled scanning of network hosts and available services are performed with multiple tools to ensure a complete inventory of hosts, devices, applications and other services they host is created.

5.2.3.2.7 Review

After initial vulnerability scans are complete, the findings will be manually reviewed and can be further verified to eliminate any false-positives and to identify existing issues in the environment. Known vulnerabilities and previously accepted risks can also be documented in the reporting platform as part of the baseline.

Additionally, manual vulnerability impact assessments (penetration testing) can be performed to attempt further exploitation of discovered vulnerabilities and leverage discovered vulnerabilities to gain further access which can assist in rating the criticality of hosts and identifying risks in network architecture.

5.2.3.2.8 Service Transition

The final stage of onboarding is the transition from onboarding to BAU where the service is run with an elevated level of hypercare to ensure any issues that arise are remediated with the highest priority.

During this time the level of interaction between the teams is high as the service is bedded in and Nexon ensures that all Customer expectations are met.

5.2.3.3 FortiGate SASE

5.2.3.3.1 Planning and Design

The objective for this step is to plan all the activities, agreed resource requirements, timescales, and discuss all the technical considerations that need to be factored in, to de-risk the deployment whilst at the same time not losing sight of the business objectives.

To achieve a successful outcome, Nexon will document the agreed scope to be covered under the service. Existing processes will be documented as well as design documentation drawn up for the new service.

This phase includes workshops where relevant business and/or technical stakeholders, will come together to agree and plan the following types of areas:

- Timescales for the project deployment and agreed milestones.
- Conduct workshop between Nexon and NobleOak to discuss and firm up SASE requirements.
- Identification of relevant operational teams whose assistance would be required to provision the service.
- Technical integration requirements for all the technical data sources in scope.
- Discuss communication strategy such as agreed escalation plans and communication templates.
- Gather detail relating to NobleOak corporate environment.
- Confirm and agree upon Incident response process.
- Develop designs for connectivity, integration an IR support requirements
- Develop & Document Test Plans
- Finalised Scope document and share with NobleOak.

5.2.3.3.2 Implementation and Deployment

The objective of this phase is to establish and prepare the Nexon SOC toolset, configure and test the SASE, establish SOC integrations with the SASE infrastructure. Activities included in this phase include:

- Integrate SASE functions to NobleOak application sets
- Integrate SASE Security function with the Nexon SOC
- Pilot, Test and Document rollout SASE client to endpoints
- Setup and configure SASE based on design documents
- Test and validate security functions for the SASE platform
- Complete As-Built Documentation
- Transition to Business-As-Usual (BAU) team

5.2.3.3.3 Validation and Optimisation

Once the integration is complete, functional testing of the SASE is undertaken to ensure that all systems are operating as expected such as relevant alerts are being correctly generated and that intersystem communication is occurring successfully.

Any deficiencies in technology or process are adjusted and tests are re-run until all parties are satisfied. Activities in this phase include:

- Validation of SASE detection and response
- Validation of SIEM console for data source monitoring and data ingestion
- Tuning and optimisation of data collection and alerting
- Tuning and validation of altering from devices
- Complete simulated incident testing and validate Incident response processes

5.2.3.3.4 Post Implementation and Handover

The final stage of onboarding is the transition from onboarding to BAU where the service is run with an elevated level of hyper care to ensure any issues that arise are remediated with the highest priority.

During this time the level of interaction between the teams is high as the service is bedded in and Nexon ensures that all NobleOak expectations are met.

Activities in this phase include:

- Development and handover of NobleOak facing dashboards
- Development of As-Built Documentation
- Finalisation and approval of incident response plan
- Execution of Incident Response Tabletop exercise of multiple scenarios

5.2.3.3.5 Security Awareness Training

The objective for this step is to plan all the activities, agreed resource requirements, timescales, and discuss all the technical considerations that need to be factored in, to de-risk the deployment whilst at the same time not losing sight of the business objectives.

To achieve a successful outcome, Nexon will document the agreed scope to be covered under the service. Existing processes will be documented as well as design documentation drawn up for the new service.

This phase includes workshops where relevant business and/or technical stakeholders, will come together to agree and plan the following types of areas:

- Timescales for the project deployment and agreed milestones.
- Conduct workshop between Nexon and NobleOak to discuss and firm up Security Awareness Training requirements.
- Identification of relevant operational teams whose assistance would be required to provision the service.

5.2.3.3.6 Implementation and Deployment

The objective of this phase is to establish Security Incident Response Process and establish the appropriate integrations with the Nexon Service desk. Activities included in this phase include:

- Configuring the security awareness program as per NobleOak's requirements
- Test & Tune the security awareness program
- Transition to Business-As-Usual (BAU) team

5.2.3.3.7 Service Transition

The final stage of onboarding is the transition from onboarding to BAU where the service is run with an elevated level of hypercare to ensure any issues that arise are remediated with the highest priority.

During this time the level of interaction between the teams is high as the service is bedded in and Nexon ensures that all Customer expectations are met.

5.2.4 Onboard Managed Services

5.2.4.1 General Onboarding Activities

- Perform general environmental due diligence, audit, and supportability assessment across all in-scope IT Managed Services components.
- Perform knowledge transfer / system familiarisation with both NobleOak internal IT and incumbent MSP
- Transfer of up to date as-built and operating procedure documentation for the in-scope systems and workloads prior to onboarding and migration.
  - Including maintenance plans / schedules / change windows and associated 3rd party communications requirements
- Gather and document relevant licensing, subscriptions and support contracts.
- Document identified environmental gaps, limitations and recommendations in alignment with both best-practice and NobleOak requirements, and discuss remediation approach with NobleOak
- Establish and prepare identified core Nexon support team resources (dedicated, designated/pod and shared)
- Review existing documentation (core, as-built and operational), identify critical gaps.
- Establish support documentation and password repositories, establish NobleOak records in ServiceNow ITSM, and populate with NobleOak-specific information.
- Establish and agree upon incident priority levels specific to NobleOak requirements
- Establish and agree upon escalation paths specific to NobleOak requirements
- Gather list of relevant NobleOak stakeholders, contacts, and third-parties. Acquire appropriate authority to engage with such third-parties on behalf of NobleOak as required.

- Share and review documentation for standard ITIL processes and NobleOak touchpoints within these processes:
  - Asset Management
  - Change Management
  - Service Documentation
  - Incident Management
  - Event Management
  - Problem Management
  - Release Management
  - Service Reporting
  - Request Management
- Establish records in Nexon's billing systems
- Establish initial schedule / roster for agreed scheduled onsite support personnel
- Establish and share Hypercare resourcing / coverage plans and contacts for period(s) immediately following cutovers / service migrations.
- Technical onboarding activities aligned with implementation timelines and activities as part of broader transformation / migration project.

5.2.4.2 Service Delivery Management

- Meet with key NobleOak contact
- Establish and agree upon cadence/process for engagement and reporting (scheduled, ad-hoc)
- Reporting establishment
  - Share standard reporting templates and inclusions
  - Discuss NobleOak-specific reporting requirements and add to reporting procedures and templates if mutually agreed. Where development or considerable additional effort is required to meet NobleOak-specific requirements, this may be executed as a variation.
- Share and review documentation for SDM-enhanced ITIL processes and NobleOak touchpoints within these processes:
  - Capacity and Performance Management
  - Service Reporting
  - Risk and Issues Management
- Discuss and schedule NobleOak-specific audit support requirements and cadence.

5.2.4.3 User Support Onboarding

- Establish and agree upon Service Desk cadence and process (standard and VIP)
  - Identify and document list of approved VIP users.
- Establish access to ITSM tool and self-service portal instance/tenancy for NobleOak's end users
- Transfer and validation of existing relevant knowledge base articles and procedures to Nexon (and create in Nexon's ServiceNow knowledge base if relevant)
- Provide general champion-based staff training and documentation for contacting and engaging with the service desk

- Acquire access to existing Active Directory and Entra ID tenant/environment.
- Acquire access to M365 tenants/admin centre via admin accounts.
- Deploy N-Central RMM on corporate-owned endpoints and configure monitoring/alerting thresholds.
- Identify and document corporate-owned endpoints with details required for Nexon's support delivery (e.g. make, model, OS, warranty / support contracts status, shared/dedicated, user(s) and staff profile(s), age, SOE/applications/policies, licenses and official/approved peripherals.)

5.2.4.4 Infrastructure Management Onboarding

- Design, Deploy and configure monitoring requirements, including initial CMDB and deploying a collector / probe software instance (LogicMonitor, N-Central) on an existing Windows-based Azure Virtual Server
- Onboard new and existing network devices (switches, wireless AP's, UPS, firewalls) including in-place vendor management dashboards/portals.
- Onboard Azure tenancy and contained services / workloads for management and monitoring
- Perform testing of environmental access and connectivity

5.2.5 ServiceNow ITSM Lite

Nexon's ServiceNow practice will perform the below activities to onboard NobleOak to Nexon's ServiceNow ITSM Lite toolset:

- Share Nexon's standard processes and structure for Incident, Problem, Change, Request, SLA's, Reports and Knowledge.
- Enable Inbound email via a single email address to create Incidents / Requests
- Enable User / Group population via Microsoft Entra ID and SAML-based Single Sign On
- Train IT fulfillers (Up to 1x 4 hour session)
- Apply NobleOak-specific branding to the portal and create up to 5x basic Catalogue Items
- Integrate Microsoft Endpoint Manager / Intune with the ServiceNow CMDB
- Import historical cases from the incumbent's ServiceNow instance, converting to Incident or Service Request records as agreed.
  - Subject to the incumbent providing appropriate API access or official ServiceNow exports.

5.2.6 Genesys Contact Centre

Nexon has included the following migration and transition plan for the rollout of the Nexon Cloud Contact Centre and Nexon Absolute solution. A high-level Project Plan will be submitted separately to this document. Some of these tasks will be the responsibility of NobleOak.

NOTE: Nexon reserves the right to deliver some of these project tasks remotely.

5.2.6.1 Network and Environmental Assessment

Nexon will conduct a network and environmental assessment with NobleOak. This assessment will be conducted to provide the following deliverables to NobleOak:

- Ensure that the NobleOak WAN will provide a sufficient level of service for Voice traffic

Nexon will deliver a network assessment document outlining any remediation steps required. Note it is possible that these remediation steps may require additional cost from NobleOak.

5.2.6.2 Project Initiation

- Nexon internal project kick-off, establish project team and review project content includes, but not limited to signed contract, scope of work and project artifacts.
- Project kick-off with NobleOak, introduce the Nexon project team, discuss engagement timeline and review Cloud readiness.
- Development and management of the Project Management Plan
- Define NobleOak resources to complete Genesys online study includes prescribed Genesys University courses (if any)
- Tour of online Genesys Cloud Resource Centre and Education Resources
- Provide Project Initiation Document (PID) and high-level project schedule.

5.2.6.3 Requirements Gathering

- Meeting with NobleOak to define the project requirements.
- Understand the current environment and capture specific requirements in developing the Detailed Design.
- Provide relevant Contact Centre Configuration Design Document to gather functional and design requirements.
- NobleOak to complete Contact Centre Configuration Design Document
- Discovery workshops for integration of Genesys Cloud CX to NobleOak's CRM system (currently Salesforce but moving to Dynamics 365) to determine functional design.
- Hold workshops to determine requirements for back-office telephony integration strategy.

5.2.6.4 Detail Design

- Nexon to review NobleOak input on Configuration Design Document
- Detailed call flow and IVR/ACD design (Genesys Cloud CX)
- Confirm Internal access to Genesys Cloud CX (i.e., Networking/Firewall/Proxies)
- Configuration Design Document sign-off
- Produce Implementation and Migration Plan

5.2.6.5 Implementation

5.2.6.5.1 Genesys Cloud CX System Build

- Activate NobleOak Genesys Cloud Org instance
- Create telephony configuration including SBC, Genesys Media Tier, SIP trunks and DID configurations

- Deploy Communications for SIP Carrier Network
- Genesys Cloud Organisation/System level configuration including:
  - Single Sign-On (SSO) with Microsoft Azure Active Directory (if required)
  - Create Divisions in Genesys Cloud CX Org (if required)
  - Define Roles and Permissions
  - Define Operational Hours and Time Zone
- Configure users.
- Configure Inbound Voice Contact Centre including:
  - IVR inbound flows with menu options and routing strategies
  - Configure web services data actions (using REST APIs to be provided by NobleOak) for screen pop, interaction treatment or routing decision
  - Schedules
  - Queues
  - Skills
  - Wrap-up codes
  - Agent scripts
  - Configure in-queue Voicemail routing options
  - Upload custom voice prompts supplied by NobleOak
- Configure Outbound dialling campaign templates including:
  - Contact lists (including DNC lists)
  - Contactable time definitions
  - Campaign rule sets
  - Outbound Wrap-up codes
  - Campaigns, dialling mode and campaign sequence definition
  - Campaign Dashboard
- Configure Agentless Outbound SMS campaigns
- Configure and enable digital channels (SMS)
  - Configuration of business rules and operational considerations in relation to SMS routing.
  - Configure and apply skills to Contact Centre agents who will handle SMS
  - Configure SMS queues in Genesys Cloud CX for ACD routing and reporting purposes
- Configure and enable digital channels (Web Messaging / Chat)
  - Provide a Web Messenger snippet with Genesys Cloud native Messenger UI to be deployed on NobleOak's website.
  - Configuration of business rules and operational considerations in relation to Web Messaging routing.
  - Configure and apply skills to Contact Centre agents who will handle Web Messaging interactions
  - Configure Web Messaging queues in Genesys Cloud CX for ACD routing and reporting purposes

  - Configure any pre-canned responses provided by NobleOak
- Configure dashboard, performance views and standard reporting.
- Configure Call Recording and Quality Management module. Includes:
  - Enable Call recording and set Encryption Keys
  - Configure recording and retention policies
  - Configure Quality Evaluation Forms
- Configure Post Interaction Surveys
- Configure Speech and Text Analytics - Essentials
  - Enable Voice Transcription based on agent queues and call flows
  - Setup and configure Genesys Cloud CX Speech Analytics including out of the box topics
- Configure Workforce Management including:
  - Business and Management Units
  - Service goal templates
  - Planning groups
  - Work plans
  - Schedules
- Configure CRM integration(s) (Pending full discovery)

5.2.6.5.2 System Acceptance Test

- Perform System Acceptance Testing

5.2.6.5.3 User Acceptance Test

- Confirm NobleOak resources completed Genesys Online Training and ready to perform User Acceptance Testing
- Assist NobleOak to identify User Acceptance Testing objectives and provide support to NobleOak UAT test plan creation
- NobleOak acceptance testing:
- Perform migration of test users to new environment
- Perform tests as per test plan
- Rectification of any issues
- NobleOak Sign-off

5.2.6.5.4 End User Training

- Up to 2 days End user training includes:
  - Genesys Cloud Agent Training (Duration: 1 hour)
  - Genesys Cloud Agent Advanced Training (Duration: 1 hour)
  - Genesys Cloud Supervisor Training (Duration: 4 hours)
  - Genesys Cloud Supervisor Advanced Training (Duration: 4 hours)
- Up to 1 day administrator training includes:
  - Genesys Cloud Basic Administrator Training
  - Genesys Cloud Architect Basic Training

- Targeted (bespoke) training:
  - WFM manager and admin training
  - Speech and text analytics training

5.2.6.5.5 Go Live Planning & Support

- Development of a Go-Live Plan document
- NobleOak to confirm go-live date
- Cutover / Go-live
  - Redirect or Port existing numbers to Nexon AnySIP
  - Test call operation to user accounts – external and internal
  - Test sample user operations
- Nexon next business day support, defect/issue management, and end-user assistance
  - Support to be provided on-site / delivered remotely
- Produce Project Issue/Quality Register document

5.2.6.6 Project Closure

- Provide post cutover support
- Update Configuration Design document and produce As-Built document
- Close Project Issue/Quality Register
- Handover to Nexon Managed Services
- Post project internal review

5.2.6.7 High Level Project Plan

Below displays key implementation approach:

Milestone	Task
Milestone 1	Project kick off and acceptance
Milestone 2	Engage key business stakeholders and 3rd parties to capture required data for the Genesys environment setup as well as integration requirements
Milestone 3	Submission of design with NobleOak acceptance
Milestone 4	Configuration of the Genesys platform as per the design. During this phase, Nexon will target to release features through iterations in order to allow the UAT team to test progressively
Milestone 5	End user testing
Milestone 6	Migration for go-live through a phased approach based on department or NobleOak recommendation. Hypercare post go-live support will be provided
Milestone 7	Project 'As-Built' documentation, lessons learnt register and closure

5.2.6.8 Inclusions

- Provision of Consulting and Project Management labour to provide the Requirements Gathering phases of the project to define the final agreed specification. This will be delivered as a mix of onsite (initial meetings) and remote work.
- Provision of Consulting and Project Management labour for the initial cut-over of users and 1st day support for any issues that may result.
- Remote support for the ongoing roll-out of the Genesys Cloud CX environment from installation to completion of the project.
- Follow up review services 30 days after cutover.

6 Service Delivery

Under a Nexon Managed Services offering, NobleOak will be supported by a service delivery team of resourceful, highly motivated Nexon staff, who are committed to providing high-quality solutions and services. Our account team is responsible for coordinating all of our resources to scope and deliver an exceptional level of overall service/solution to you.

The service delivery team will retain a comprehensive knowledge of NobleOak's operational and business requirements. As such, the service delivery team will be able to provide appropriate advice, continuous improvement and suggest/drive resolution of services and issues.

6.1 Account Manager / Business Development Manager

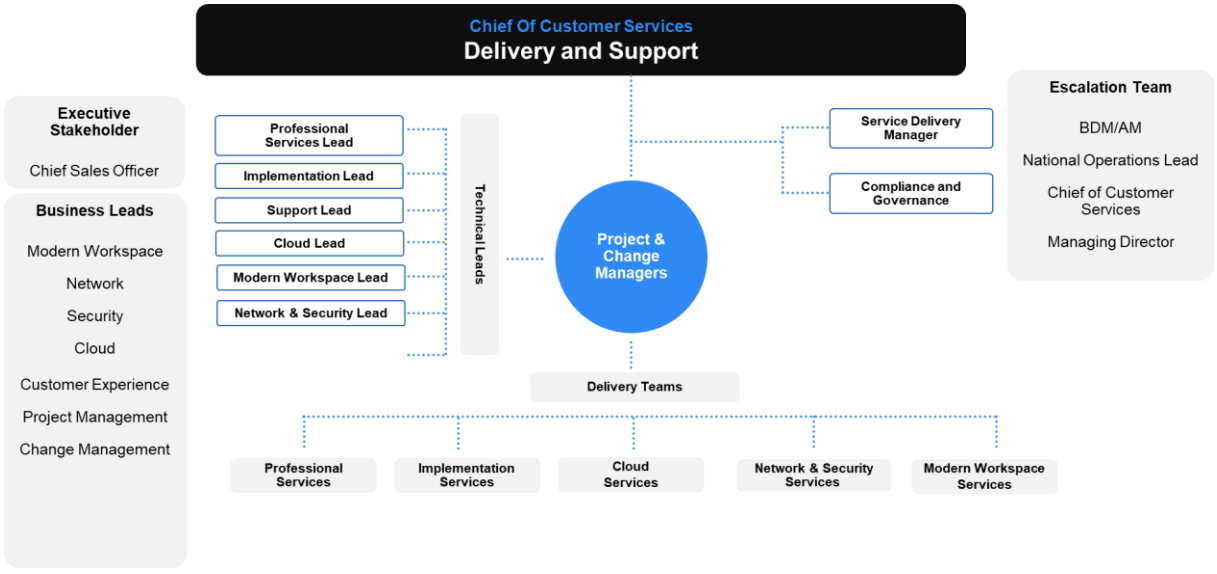

NobleOak will have a dedicated Account Manager / Business Development Manager (AM/BDM) to drive ongoing overall management of the account.

This person will be responsible for driving ongoing collaboration and engagement with NobleOak surrounding services expansion or optimisation. In contrast to a static or transactional engagement, this will enable iterative development and implementation of an optimal strategy that is focused on continuously enhancing and transforming NobleOak's IT environment and in a cost-effective way, enabling NobleOak to most effectively meet its evolving business and operational goals whilst minimising cost by exploiting and leveraging modern best-of-breed technologies and services wherever appropriate.

This person will engage with NobleOak and Nexon's extensive team of Presales Solution Architects, Consultants, Engineers and Subject-Matter Experts (SME's), and will pull in requisite resources to assist with driving discussions, strategy development, and proposals as required.

6.2 Service Delivery Structure and Approach

An overview of BAU and Project related key personnel can be found below, please note that this is indicative only and not necessarily exhaustive.

6.3 ITIL-Based Governance

Nexon's service delivery governance utilises the ITIL-based services management framework which includes the following core components across all specialisations:

- Asset Management
  - Identify, track, audit and report on all asset information contained within NobleOak's environment.
- Change Management
  - Alongside NobleOak, plan and assess all changes to NobleOak's environment to minimise risk and disruption whilst complying with NobleOak's existing change management policies.
- Service Documentation
  - Create and maintain process documentation for all Core Service modules to enhance and facilitate NobleOak's own delivery and technical run books and administration guides to maintain operational use of best practice.
- Incident Management
  - Manage and resolve incidents to restore services as quickly as possible, in accordance with Nexon's incident management processes.
- Event Management
  - Create and manage both monitoring and alerting within NobleOak's environment to detect issues and rectify them as quickly as possible
- Problem Management
  - Develop, implement, and operate procedures designed to minimise the impact and recurrence of incidents and eliminate problems, in accordance with Nexon's problem management processes.
- Release Management
  - Help ensure the secure, controlled deployment of vendor's product releases into NobleOak's equipment from the definition, creation and documentation of release plans to the implementation of release deployment activities.
- Service Reporting (standard)
  - Provide standardised monthly reports from Nexon's service management system.
- Request Management
  - Respond and implement service requests that add value to NobleOak's overall environment

6.4 Service Delivery Management and Responsibilities

NobleOak will be provided with a dedicated Service Delivery Manager (SDM) to govern and oversee all Nexon-provided services for NobleOak.

Service Delivery Manager

Business Development Manager

	OPERATIONAL	TACTICAL	STRATEGIC
Purpose	Day-to-day, task-driven detail on contract components	Project-driven status of key initiatives and of contract performance	Business-IT alignment, program planning & strategic advancement
Primary focus	Operational performance	Resource & financial performance, and compliance	Customer satisfaction
Business value	Stability & Retention	Profitability & Perceived Value	Transformation
Primary audience	IT & First Level of Contract Management	CIO & sub-CIO-level	CxO & LOB levels
Frequency of contact	Weekly	Monthly	Quarterly / Yearly
Main components	Service (BAU) details, events, alerts/issue management and improvement plans	KPI, SLA reporting, concerns, financial tracking, projects review, benchmarking and trend analysis	Industry developments or movements, business updates, joint initiatives and fundraising, technology innovation, our partnership and any risks

The SDM will be the primary point of contact/engagement for any queries regarding products/services, support or billing.

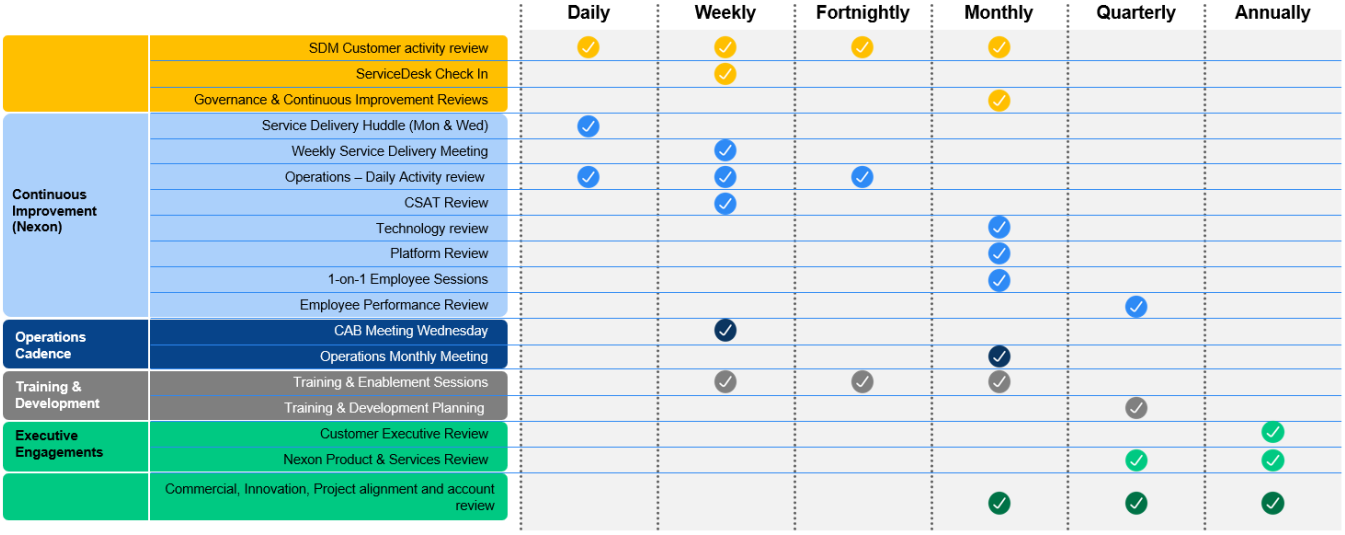

The SDM will ensure ongoing excellence and the highest level of quality in regard to managed services provision, the best-possible end-to-end customer experience and that all services remain optimally aligned to NobleOak's evolving business requirements.

Nexon's SDM governance bolsters the ITIL-based service management framework by both enhancing all core components and by introducing additional components. Key additions are as follows:

- Service Reporting (**enhanced**)
  - Produce a selection of monthly, fortnightly and weekly reports from health check information on the environment with a monthly (or as otherwise mutually agreed) review of the service being delivered by the Nexon team.
- Capacity and Performance Management
  - Proactively assess and plan all capacity and performance requirements to meet existing and future business needs in the most efficient and economic manner.
- Risk and Issues Management
  - Risk and issue management is the process to identify and log risks throughout the term of operational support. Nexon will maintain a risk and issues register and allocate appropriate risk owner throughout the term of the engagement.
- Audit Support
  - Nexon's SDM will assist NobleOak with responding to NobleOak's Auditors by providing input relevant to Nexon's scope. An allowance of up to 2 weeks (80 hours) effort per contract year during Business Hours has been considered, for Nexon's technical and non-technical resources.

Nexon's SDM-driven customer and internal engagement rhythms are as follows. Internal engagement rhythms are included for the sake of transparency.

- Please note that the frequency and duration of such engagements is indicative only, and is completely flexible, customisable and tailorable based upon individual customer requirements and desires.

		Daily	Weekly	Fortnightly	Monthly	Quarterly	Annually
	SDM Customer activity review	✓	✓	✓	✓		
	ServiceDesk Check In		✓				
	Governance & Continuous Improvement Reviews				✓		
Continuous Improvement (Nexon)	Service Delivery Huddle (Mon & Wed)	✓					
	Weekly Service Delivery Meeting		✓				
	Operations – Daily Activity review	✓	✓	✓			
	CSAT Review		✓				
	Technology review				✓		
	Platform Review				✓		
	1-on-1 Employee Sessions				✓		
	Employee Performance Review					✓	
Operations Cadence	CAB Meeting Wednesday		✓				
	Operations Monthly Meeting				✓		
Training & Development	Training & Enablement Sessions		✓	✓	✓		
	Training & Development Planning					✓	
Executive Engagements	Customer Executive Review						✓
	Nexon Product & Services Review					✓	✓
	Commercial, Innovation, Project alignment and account review				✓	✓	✓

6.5 Reporting and Ongoing Engagement

The following primary, ongoing engagement tools and governance sessions will be driven by Nexon and carried out between Nexon and NobleOak throughout the Agreement term.

These activities will enable two-way communication and collaboration between Nexon and NobleOak for the purposes of ongoing services feedback, transparency and to ensure overall continued services improvement for both BAU and identification of new services / services enhancement.

6.5.1 Regular Customer Check-in Calls

Regular check-in calls will be held between key Nexon and NobleOak personnel to review Business as Usual (BAU) activities and provided ongoing managed services.

Check-in calls are generally held weekly during the first 3 months of the engagement, then on a fortnightly basis; however this varies depending upon the requirements and desires of individual customers. Nexon will mutually agree upon an appropriate and optimal frequency of check-in calls alongside NobleOak in writing prior to the Agreement commencement date – and can be varied over the course of the service based on need.

6.5.2 Monthly Governance Sessions with Reporting

A monthly report will be generated by Nexon and made available to NobleOak throughout the duration of the Agreement term. The report(s) produced may be discussed via an online meeting (e.g. MS Teams) as agreed upon between Nexon and NobleOak in writing.

The monthly report / governance pack format will be mutually agreed to 3 days prior to each scheduled monthly meetings and will include the following information at a minimum (unless otherwise mutually agreed between Nexon and NobleOak in writing):

- Ticket volumes and all service tickets opened and closed during the given month
- Ongoing incidents and tickets as applicable
- General monthly performance, KPI's and SLA's (First Response Times and Resolved Times on all tickets) for the given month.
- Priority 1 reporting – Reporting on any P1 Incident and/or Problem occurrences during the given month

- Post Incident Report generated after P1 Incident and/or related Problem resolution for the given month
- Update on preventative maintenance schedules at the time of report generation
- Ticket or incident trends as applicable
- Proactive health check reports based on monitoring systems at the time of report generation
- + any additional information as mutually agreed between Nexon and NobleOak in writing.
  - such additional information could include detail from regular audit activities performed during the period.

Any proposals which potentially result from these monthly reports will be communicated by Nexon to NobleOak in writing. Sample monthly governance reports can be provided upon request.

6.5.3 Ongoing Engagement Management

Nexon will provide management of ongoing, pro-active engagement between key Nexon and NobleOak personnel to ensure that there is a single point of contact to streamline engagement communication, and to ensure consistency of tracking, updates and progress via activity logs and registers for all aspects of the engagement.

Nexon will similarly drive ad-hoc meetings if and as required with NobleOak, following Nexon or NobleOak request.

6.6 Operational Continuity and Contingency Planning (BCP)

The Nexon Business Continuity Plan (BCP) provides Nexon employees with the ability to connect to production services and perform day-to-day business activities, even in the event that employees aren't able to access production offices. The full BCP plan can be provided on NobleOak's request.

A redundant network path also exists between the Production and Secondary/DR Data Centre's, and a secondary external facing link has been established for Nexon's Summer Hill-based DR Data Centre.

Nexon has defined and plans regular BCP-DR tests annually to provide continued assurance of this model.

Should key resources leave the organisation, Nexon has a mature operations process that includes comprehensive documentation (to mitigate the risk of knowledge loss) and staff redundancy (including continued upskilling of staff) across key technical areas such Managed Services, Infrastructure, Network, Applications, Unified Communications and Desktop.

Furthermore, the Nexon onboarding process audits the existing environment, third parties (if necessary) and critical environment of customers to ensure that appropriate risk mitigation and BCP is in place surrounding continuity of services and continuity of SLA enforcement.

6.7 Customer Experience Feedback System and Continuous Services Improvement

Nexon's customer experience platform is based on a single-click feedback system, which is prompted upon the completion of each service request. We measure customer feedback on a real-time basis and recognise our team on their ability to deliver happiness to the customer.

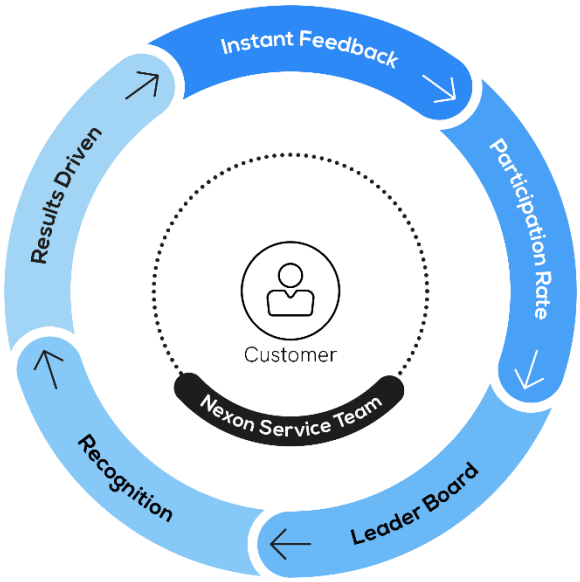

Nexon proactively seeks your feedback, systematically measure it in real-time and use this to motivate our team and continuously improve our operations.

Nexon's happiness ethos is based on the following core values:

- Nexon deliver's what we promise and creates happy customers
- Nexon encourages people to be intellectually engaged and self-motivated
- Nexon cares about our work and takes pride in it.
- Nexon value's fun and a leader culture
- Nexon actively embrace's critical feedback to better ourselves
- Nexon operate a sustainable and profitable business with integrity

Once a ticket has been closed, an automated binary feedback email will be sent to the ticket originator. If the response comes back with an unhappy experience, the end-user will receive a call back from the Nexon service desk team leader within four hours to understand why. The reason why is then categorised into three key areas which are either:

- People
- Platform
- Process

Once defined, the team leader will come back to the end-user, who generated the feedback to advise what has been done to mitigate the potential of this (un)happy result occurring again. All results are documented and reported on monthly as part of the scheduled governance meetings and reporting.

We will measure NobleOak's satisfaction during every interaction all the way through the lifecycle. At each point we ask for and seek out opportunities to refine, improve and better our service.

Our Client Happiness Model provides measurable value with instant feedback and a closed loop process that provides NobleOak with insights and analytics on call resolutions, and outcomes we are responsible for.

6.8 Performance Management and Key Performance Indicators (KPI's)

Nexon manages its Service Desk and support agents with Key Performance Indicators (KPIs) that are aimed to meet operational objectives such as SLA attainment, operational metrics such as network availability, and service performance, where appropriate.

To maintain and obtain our required service levels, Nexon has a well-developed Reward and Recognition program, which is run quarterly to recognise staff that have exceeded the set expectations for ongoing performance. This program consists of an award and gift acknowledging their efforts at a company-wide meeting. We will also work with NobleOak to ensure that any outstanding individual(s) as nominated by NobleOak are also acknowledged.

7 Support Coverage & Service Levels

7.1 Service Level Agreement - Managed Services – Gold Plus

Nexon will provide NobleOak with our Gold-Plus tier Support Model which includes 24x7x365 customer support coverage (including public holidays) and measurable service level targets.

7.1.1 Support Coverage

Business Hours (BH)	After Hours (AH)
Monday to Friday – 7.00am to 6.00pm	Monday to Friday – 6.00pm to 7.00am Saturday, Sunday, Public Holidays – 24 hours
P1 to P4	**P1 and P2**
Telephone, Email, Portal	**Telephone Only**

Coverage hours are in NSW time – AEST (UTC+10) or AEDT (UTC+11)

7.1.2 Service Levels

Priority	Response SLA		Resolution Objective	Coverage Hours
	Business Hours	After Hours		
P1 – Critical	30 mins	1 hour	6 hours	BH + AH
P2 – High	1 hour	2 hours	8 hours	BH + AH
P3 – Medium	3 hours	-	14 hours	BH Only
P4 – Low	6 hours	-	24 hours	BH Only

7.1.3 Service Level Targets

Measurement Period	Monthly
Targets	• 95% Response SLA • 85% Resolution Objective (SLO) • 95% CSAT Target (SLO)

7.1.4 Service Level Definitions

Term	Definition
Response	The time between opening of an incident and triage commencing. A response is deemed to have been provided once: • Identification, Logging, Categorisation and Prioritisation have been completed. • A Nexon team member begins triaging the incident. This may be achieved before contacting the user, or at the same time as the initial call (if engagement is via Phone).
Response SLA	The timeframe that Nexon commits to provide a Response, aligned to each incident priority level.
Response Target	The number of Incidents per month (expressed as a percentage) that Nexon must respond to within the Response SLA for the SLA to be achieved. Split by priority and service line.

Resolution Objective	The timeframe that Nexon will perform either of the following: • Work towards implementing a workaround or permanent fix to the Incident (whichever is sooner) • Where a third-party resolver has not been approved for ticket lifecycle management, initially handoff the ticket to the appropriate third party resolver.
Coverage	The time during which Incidents of a particular priority level will be worked. Coverage is also used to calculate SLA achievement. Response and Resolution service level timers will be paused outside of Coverage hours.
CSAT Target	The number of positive customer satisfaction responses received per month (expressed as a percentage) as part of the binary feedback result requested upon Incident completion.

7.1.5 Priority Level Definitions

Priority	Level	Description
Priority 1 (P1)	Critical	Major incident critically affects NobleOak's business operation. System often will be completely down. No work around available. Multiple users affected.
Priority 2 (P2)	High	Incident resulting in severely degraded performance. High impact to business.
Priority 3 (P3)	Medium	Incident causing functionality to be reduced or performance impaired affecting only a small section of the business. Impact is low. Often work around is available.
Priority 4 (P4)	Low	Configuration or design advice required by NobleOak where there is no impact on NobleOak's business.

7.1.6 Azure Service Levels

Microsoft Azure's service levels are published here:
https://www.microsoft.com/licensing/docs/view/Service-Level-Agreements-SLA-for-Online-Services?lang=1

7.2 Service Level agreement – SecOps

The SecOps Service Level Agreement applies to the “Managed SOC and SIEM” service.

7.2.1 Support Coverage – SecOps

Business Hours (BH)	After Hours (AH)
Monday to Friday – 9:00am to 5:00pm	Monday to Friday 5:00pm – 9:00am Saturday, Sunday, Public Holidays – 24 hours
P1 to P5	**P1 and P2**
Telephone, Email, Portal	**Telephone Only**

Coverage hours are in NSW time – AEST (UTC+10) or AEDT (UTC+11).

7.2.2 Service Levels – SecOps

Priority	Time to Acknowledge		Response Type	Coverage Hours
	Business Hours	After Hours		
Security Events and Security Incidents				
P1 - Highest	15 mins	15 mins	Immediate investigation & containment	BH + AH
P2 - High	30 mins	30 mins	High priority investigation & containment	BH + AH
P3 - Medium	4 hours	-	Priority investigation & containment	BH Only
P4 - Low	1 Business Day	-	Investigation & potential containment	BH Only
P5 - Lowest	2 Business Days	-	Information Only	BH Only
Other Ticket Types				
Per Priority	Per Priority	-	Varies	BH Only

For SecOps, “Time to Acknowledge” is considered to be the same as “Response”.

7.2.3 Service Level Targets – SecOps

Measurement Period	Monthly
Targets	95% Response SLA

7.2.4 Ticket Type Definitions – SecOps

Type	Definition	Example
Security Incident	An occurrence that results in actual jeopardy to the confidentiality, integrity, or availability (CIA) of a user, information system or information contained within.	Ransomware spreading through network.
Security Event	An occurrence that could result in actual jeopardy to the confidentiality, integrity, or availability (CIA) of a user, information system or information contained within if not triaged and investigated by the SOC.	Small DDoS attack detected on the firewall. SOC would block the IP but CIA was never compromised.
Other	Any other ticket type	-

7.2.5 Priority Level Definitions – SecOps

Incident Priority	Ticket Priority	Definition
Priority 1 (P1)	Highest	• Major / whole of business impact, or • The incident is likely to be unrecoverable, or • Lives are at risk.
Priority 2 (P2)	High	• Substantial business impact, or • Likely P1 if not mitigated, or • Confirmed Information Confidentiality, Integrity, or Availability Lost, or • The incident is likely to require an extended recovery, or • There is a verified active beachhead situation, or • There is a verified Advanced Persistent Threat.
Priority 3 (P3)	Medium	• No or Low business impact, AND • Likely P2 if not mitigated, or • Malicious activity detected and NOT mitigated.
Priority 4 (P4)	Low	• No business impact, AND • Attack detected and unclear if mitigated, or • Likely P3 if not mitigated
Priority 5 (P5)	Lowest	• No business impact • No information impact • Attack detected and mitigated

7.3 Support Call Suspension

Support calls may be suspended, which has the effect of 'stopping the clock' on the SLA calculations. The timestamp for suspended calls is managed by Nexon's ITSM Management System. Support calls may be suspended for the following reasons:

- Awaiting customer response or actions
- Awaiting vendor response or actions
- Awaiting confirmation of fix / fulfilment.

Suspended calls will have a follow-up date and time set, which will prompt the assigned Nexon resource to check in with the affected user and the party that is being waited upon. Where an agreed number of follow-ups have been reached, the engineer will escalate to the Nexon SDM and/or the NobleOak key stakeholder for decision on next steps.

7.4 Minimum Volumes

All Service Level calculations will include a minimum volume of incidents (e.g. 10 incidents for a 90% SLA Target) to ensure a single breach does not prevent Service Levels being met.

A Service Level Target (expressed as a percentage) is the number of incidents that Nexon must respond to within the SLA for that SLA to be considered as achieved. Where the number achieved has a fractional component, then the number of allowable exceptions will be rounded up to the next highest whole number. For example: If the Target is “95%”, and Nexon achieves 9 out of a sample of 10, then the “number of allowable exceptions” is 5% of 10 = 0.5, which is rounded up to 1 allowable exception.

7.5 SLA Rebates

At the commencement of each calendar month, Nexon will calculate service level achievement for the previous calendar month. This service level achievement result will be included in the SLA Report.

Where a Service Level is not attained a Service Credit may apply, subject to Minimum Volumes above.

Service Level Failure	Outcome
Response Target	10% credit applied to the following months’ invoice • Managed Services components only (excluding licensing, subscriptions, amortised once-off charges, etc) • Only provided for the service line where the SLA failure occurred (network, cloud, SecOps, modern workplace, unified communications, etc)
Resolution Target	No credit provided – Service Level Objective (SLO) only
CSAT Target	No credit provided – Service Level Objective (SLO) only

8 Support Model and Engagement

8.1 Contact Methods

Business Hours	• Phone • Email • Portal (ServiceNow ITSM)
After Hours	• Phone

8.2 Standard Incident Management and Resolution Assurance

All incidents/tickets are bound by the Service Level Agreement (SLA), which has defined response/resolution SLA targets per individual incident priority level which are measured 24x7 and reported upon monthly; this ensures that Nexon are committed to efficiently triage, respond to and resolve such tickets within clearly defined and agreed timeframes.

Nexon's Service Desk agents feature broad Subject-Matter Expertise (SME) to enable efficient identification, replication and actioning of tickets with a high degree of first call resolution. Such technical depth and capability are continuously expanding and evolving via obtained experience and proactive upskilling, acquisition, refinement, and growth, and is both documented and spread across multiple resources to ensure redundancy and appropriate knowledge transfer.

This is further supplemented by an in-depth Knowledge Management System and NobleOak-specific operational guides/documentation and known error databases, which are maintained by Nexon within our ITSM platform.

All incidents, problems and requests must be logged by either contacting the Service Desk by telephone, by email or via the online ITSM tool portal.

Alerts are also triggered via RMM tools for specific in-scope managed devices or services and raise a relevant ticket, and Nexon may similarly raise tickets during BAU as appropriate (for further discussion with NobleOak as necessary) if incidents, problems or recommendations are identified.

At the time of request/alert, the Service Desk will respond within the agreed response SLA target, record the incident or request and issue a Ticket number. All tickets and incidents are prioritised across five (5) incident priority levels and at the time of logging, the request will be assigned a relevant-priority level based upon the actual or potential impact to NobleOak and allocated to the relevant department for action. All five (5) incident priority levels have defined response/resolution SLA targets.

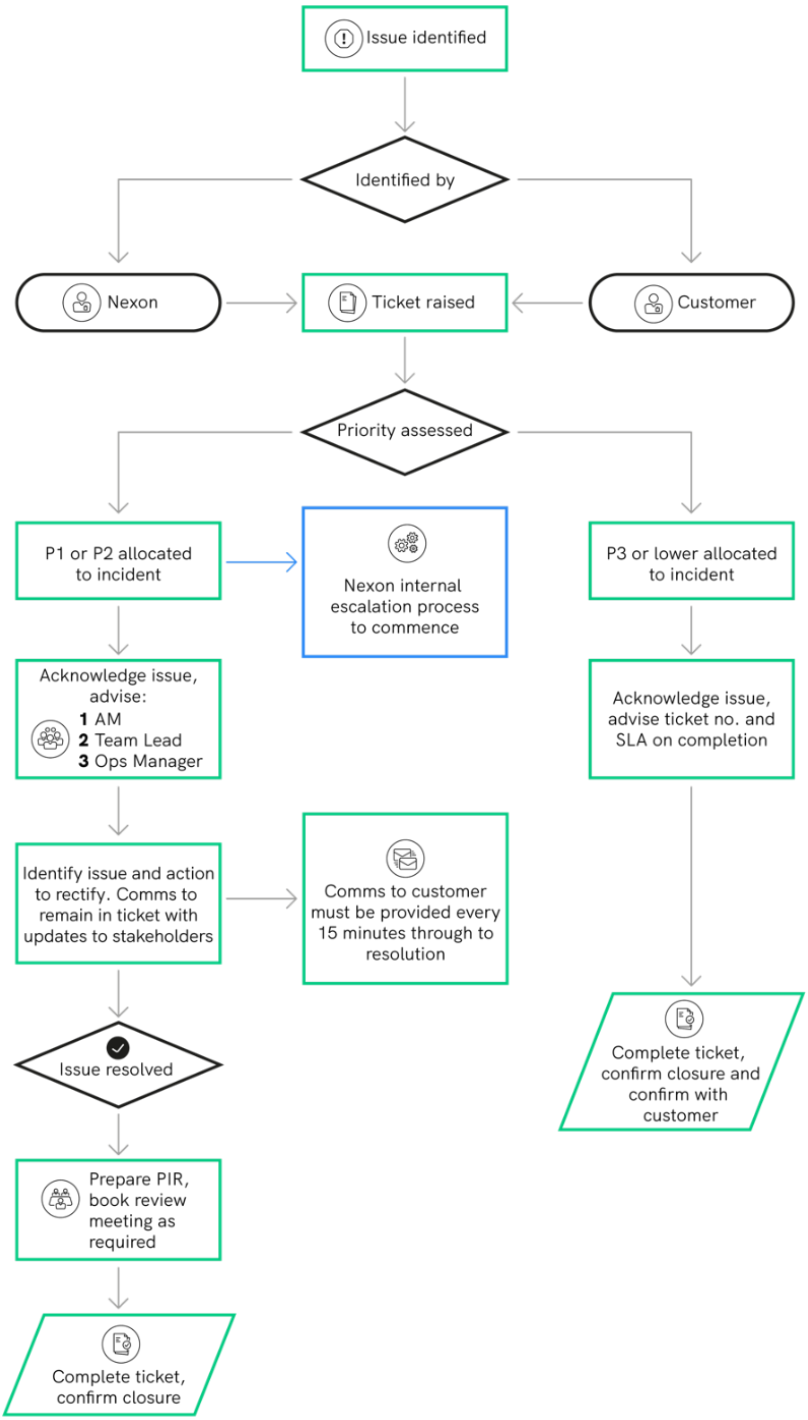

As part of the ongoing activity within the ticket/incident, the root cause, business impact and required priority level is monitored and re- assessed as it progresses. As required, the initially assigned priority level may be increased or decreased throughout the ticket lifecycle.

All incident priority levels have clearly defined response and resolution SLAs, except for the lowest priority level (P5) which is predominantly used for scheduled work. Under such circumstances, P5 SLAs will be defined during onboarding (for standard planned work or maintenance) or for associated ad-hoc work/project work will be as mutually agreed between Nexon and NobleOak in writing.

This process aims to ensure that all incidents/tickets are resolved within agreed and appropriate resolution SLAs, regardless of incident priority level.

All ticket updates and notifications are managed within our ITSM platform via live dashboards and can be forwarded via email. This ensures we have consistent visibility on the progressing of the request, ensures target SLAs are met and have the ability to provide comprehensive monthly reporting across all services and product sets.

Nexon has a defined assessment and escalations process per support level to ensure that tickets are optimised in terms of efficient and effective troubleshooting and resolution, this includes pre-defined checklists, escalation paths/personnel and triggers (e.g., priority, SLA or checklist based) with associated notifications.

NobleOak will also have access to the ITSM customer portal to review user's individual current and completed Support Management activities. This can be configured to provide multiple users within NobleOak the ability to see their own activity. Nexon will provide ITSM tool training and collateral to NobleOak to facilitate and streamline contacting our Support Team, and to clearly define engagement processes and ticket lifecycle within a NobleOak-specific operational guide to facilitate and streamline our ongoing activity.

Nexon's ServiceNow ITSM tool features the capability to classify and assign metadata to tickets/incidents, and all such tickets/incidents are appropriately classified. Nexon leverages in-house best-practice processes to ensure that such classification is both consistent and accurate, enabling us to integrate ITIL-based governance framework components such as (but not necessarily limited to) Problem Management to provide proactive trend and root-cause analysis, incident or problem prevention and mitigation (e.g., permanent corrective action).

Furthermore, Nexon's ITSM ticket classification enables us to further contextualise, visualise and report upon ticket volumes.

8.3 P1 (Critical) and P2 (High) Incident Management

Priority level 1 (Critical) and 2 (High) level incidents/tickets include an enhanced response, resolution and escalations process due to their criticality and the necessity of a highly efficient and effective resolution.

When a P1 or P2 incident priority level is assigned to a ticket, the Dedicated Account Manager, Department/Team Lead and National Operations Manager are immediately notified, and NobleOak is contacted.

Nexon then leverages the full-extent of our senior engineers, wider support team and subject-matter experts (SMEs) to provide quick and effective identification, analysis and rectification of such incidents whilst associated Nexon stakeholders provide overarching close-proximity incident and team management. NobleOak are notified of status updates every 15-minutes during the entire ticket lifecycle.

Following resolution of P1 tickets and incidents, Nexon will prepare a Post-Incident Report (PIR) detailing information such as (but not necessarily including or limited to) the incident/ticket unique identification, owner and description; related incidents; priority level; incident date and duration/timeline; response team and responders; lead-up events or status before incident; root-cause/faults; affected extent of or impact to services, environment, business operations and/or stakeholders; method of detection/response; response/resolution SLAs; remediation steps (e.g., via feeding into incident management) and mitigation steps (e.g., via feeding into problem management) or follow-up tasks (e.g., process, people, platform, environment and/or service based).

This PIR document will be prepared, and a PIR session/meeting booked with all relevant stakeholders to review the incident alongside the report. Following review and agreement of the PIR and all relevant data, the ticket will be closed.

Nexon will then proceed to action any required mitigation or next steps, which were outlined within the PIR and mutually agreed to and will keep all relevant stakeholders notified of the status of such steps. Once completed, a final review is performed and mutually agreed by all relevant stakeholders to ensure that all appropriate actions and steps have been taken to meet the expected and defined outcomes.

8.4 Support Model and Service Desk Location

Nexon will provide the Services through our premium Onshore model for NobleOak.

Nexon's Service Desk includes both a core onshore (Australian-based) support team and a supplementary offshore support team in various locations.

Nexon's core onshore Service Desk is currently located within Sydney NSW at Nexon's head office (Summer Hill NSW), Melbourne VIC, and Newcastle NSW.

Nexon does have Offshore staff, however these staff will not interact with NobleOak or interact with NobleOak's infrastructure.

Support Model	▸ **Onshore (AU based) Core Support Team** ○ All requests and incidents. ▸ **Offshore Supplementary Support Team** ○ Not used for this SOW. ○ Adhere to specific controls, guidelines, compliance and standard operating environments as dictated by Nexon Asia Pacific.

8.5 Support Levels

There are 4 levels of potential support provided by the Nexon Service Desk. Levels are listed in escalation order. Nexon may provide the following services as listed below:

Level 1 Technical Support
(Initial triage, basic troubleshooting & issue replication, escalation)
Provided for all NobleOak IT services.

- Initial triage and basic troubleshooting/support.
- Assign Incident/Problem/Request Ticket ID to NobleOak
- Document symptoms of the incident fault & events leading up to the incident
- Validate the existence & nature of the incident
- Check for errors in configuration & submit details as Request for Change
- Isolate faults through Root Cause Analysis troubleshooting
- Understand server hardware & OS software to better ascertain the fault
- Ascertain patch levels & apply remote patches as preventative maintenance (if device is in Nexon scope)
- Apply manufacturer recommended changes remotely
- Capture logs as required for analysis & historical records

Level 2 Technical Support
(More complex troubleshooting)
Provided for in-scope services.

- Perform Root Cause Analysis, reviewing symptoms & historical events for validation
- Check for errors in programming or configuration & make changes to reach a resolution
- Isolate hardware faults & replace with appropriate hardware to rectify the issue
- Conduct onsite preventative maintenance procedures
- Conduct programming changes as required rectifying the fault on site
- Ascertain patch levels & apply patches to resolve issues/faults
- Apply manufacturer recommended changes on site as recommended

- Capture logs as required for analysis & historical records, to assist Level 3 with their diagnosis
- Run backups as required, ensuring completion & correct storage on the client's site
- Analyse debug fault as required on site

Level 3 Technical Support
(Most qualified, experienced and complex troubleshooting)
Provided for in-scope services.

- Analyse debug-level log data & core dumps
- Conduct lab duplication of complex faults
- Provide technical & support assistance to level 1 & level 2 engineering support

Level 4 Support
(Vendor)
Provided for in-scope services.
This is provided on a per vendor basis, dependent on manufacturer warranty or NobleOak's vendor support contract in case of device failure. Further, escalation to vendor support is only required if the root cause of an incident or problem falls outside of the current internal knowledge set *OR* is identified as a vendor issue.

9 Deliverables / Responsibility Matrices

NOTE: Third Party and/or Vendor assistance and cooperation may be required for Nexon to complete some of its included responsibilities / tasks.

The following tables outlines each party's (Nexon's and NobleOak's) responsibilities pertaining to the included scope of works and services throughout the term of this contract.

The tasks are listed in a RACI matrix format and can be interpreted as follows:

- **R - Responsible**: The individual or group who is responsible for doing the work. There can be more than one R
- **A - Accountable**: The individual or group who is accountable for the action. This person or group has the power of veto. Only one A can be assigned to a task.
- **C - Consulted**: The individual or group who is consulted before a task is performed. This is a two-way conversation.
- **I - Informed**: The individual or group who needs to be informed after the task has been performed. This is a one-way conversation.

9.1 ITIL-Based Governance

Task	Nexon	NobleOak
Change Management Drive and maintain ITIL-based Change Management, ensuring appropriate: • Assessment and mitigation against negative risk & impact • Scheduling involving minimal downtime and disruption • Full reversals or back out capabilities • Testing and validation • Approval by stakeholders (incl. CAB as necessary) • Documentation	R, A	C, I
Services Documentation Drive and maintain ITIL-based Services Documentation, ensuring that documentation and knowledge base articles surrounding Nexon-provided services and the in-scope environment is: • Relevant • Complete • Accurate • Up-to-date • Securely and appropriately stored • Accessible by approved and relevant parties only	R, A	C, I
Incident Management Drive and maintain ITIL-based Incident Management, ensuring that throughout their lifecycle all in-scope incidents are appropriately: • Captured and triaged by Nexon (target as per response service level). • Logged in ServiceNow ITSM • Categorised • Assigned and re-assigned at an appropriate priority level • Assigned and re-assigned to an appropriate resolver individual or group • Escalated as necessary as per defined escalation path. • Communicated as necessary to stakeholders as per defined communications.	R, A	C, I

Task	Nexon	NobleOak
• Resolved and closed in ServiceNow ITSM as soon as is feasibly possible (target as per resolution service level). • Subject to a PIR (P1/P2 only). • Subject to a binary feedback email survey to relevant stakeholders (for CSAT). • Included within monthly reports.		
Event Management Drive and maintain ITIL-based Event Management, ensuring appropriate: • Monitoring, logging and alerting thresholds are configured for relevant and supported environmental components. • Maintenance of relevant monitoring, logging and alerting toolsets. • Review and management of alerted events in alignment with Incident Management.	R, A	C, I
Problem Management Drive and maintain ITIL-based Problem Management, ensuring appropriate: • Review and identification of trending or recurring tickets to identify problems. • Logging of identified problems within ServiceNow ITSM. • Root-cause analysis of identified problems. • Identification of actions to mitigate against or correct problems. • Planning for mitigation or corrective actions of identified problems, including stakeholder approval. • Management and completion of mitigation or corrective actions of identified problems as per plan. • Verification of problem mitigation or correction following plan execution alongside stakeholders, including major problem reviews as required. • Communication as necessary to stakeholders are per defined communications. • Record closure in ServiceNow ITSM.	R, A	C, I
Release Management Drive and maintain ITIL-based Release Management, ensuring appropriate: • Validation of currency and suitability of approved Change Plans • Creation of Release Plans in alignment with approved Change Plans • Progression and completion of Releases in alignment with approved Release Plans • Release closure activities	R, A	C, I
Service Reporting Drive and maintain ITIL-based Services Reporting, ensuring appropriate: • Monthly reports are generated and provided to specified NobleOak contacts via email, outlining: ○ Ticket volumes (total, open, closed) ○ Service Level compliance (CSAT, response, resolution) ○ P1 reports ○ PIR key details for any P1/P2 tickets	R, A	C, I

Task	Nexon	NobleOak
○ Upcoming key maintenance schedules or tasks ○ Ticket trends ○ Environmental patch/firmware currency ○ Environmental availability and health checks based upon monitoring systems ○ Any additional information as mutually agreed (requires SDM service)		
Request Management Drive and maintain ITIL-based Request Management, ensuring that throughout their lifecycle all in-scope requests are appropriately: • Captured and triaged by Nexon (target as per response service level). • Validated against requestor privilege and authority. • Logged in ServiceNow ITSM • Categorised • Assigned and re-assigned at an appropriate priority level • Assigned and re-assigned to an appropriate resolver individual or group • Escalated as necessary as per defined escalation path. • Communicated as necessary to stakeholders as per defined communications. • Resolved and closed in ServiceNow ITSM as soon as is feasibly possible (target as per resolution service level). • Subject to a binary feedback email survey to relevant stakeholders (for CSAT). • Included within monthly reports.	R, A	C, I
Capacity and Performance Management Drive and maintain ITIL-based Capacity and Performance Management, ensuring appropriate internal and NobleOak-facing: • Tools, capabilities and facilities deployment to accurately monitor Capacity and Performance actuals. • Proactive assessment of Capacity and Performance requirements versus forecasts. • Proactive planning of Capacity and Performance optimisations based upon assessment. • Approval via relevant stakeholders of Capacity and Performance optimisation plans. • Execution of Capacity and Performance optimisation plans. • Review of results of executed Capacity and Performance optimisation plans versus expectations. • Documentation. NOTE: Requires SDM service.	R, A	C, I
Risk and Issues Management Drive and maintain ITIL-based Risk and Issues Management, ensuring appropriate: • Maintenance of a documented, accurate and up-to-date Risk Register • Availability and use of Risk Register to/with other ITIL components. • Distribution of Risk Register to relevant stakeholders. NOTE: Requires SDM service.	R, A	C, I

Task	Nexon	NobleOak
Attend and engage within Change, Release, Problem, Capacity & Performance and Risk and Issues meetings/reviews as necessary.	C, I	R, A
Make reasonable endeavours to raise Requests and Incidents as soon as is feasibly possible.	C, I	R, A
Make reasonable endeavours to complete feedback surveys at the closure of Incidents and Requests, providing as much information and clarity as possible.	C, I	R, A
When raising Requests and Incidents, make reasonable endeavours to provide as much clarity and information as possible to enable effective triage and execution.	C, I	R, A
Notify of desired stakeholders, recipients and points of contact for engagement and content distribution (e.g., reports, risk registers, documentation etc.).	C, I	R, A

9.2 Service Delivery Management

Task	Nexon	NobleOak
ITIL Delivery – Monitoring & Governance	R, A	C, I
Operational and Support Processes – Advisory, Enhancement & Support	R, A	C, I
Operational and Support Processes – Feedback and Approval	C, I	R, A
Customer Engagement – Advisory, Enhancement & Support	R, A	C, I
Customer Engagement – Feedback and Approval	C, I	R, A
Monthly Reporting – Customisation & Enhancement	R, A	C, I
Monthly Reporting – Feedback and Approval	C, I	R, A
Monthly Governance Sessions – Schedule & Run	R, A	C, I
Monthly Governance Sessions – Availability notification, attendance and engagement	C, I	R, A

9.3 Remote and Onsite Support

Task	Nexon	NobleOak
Adhere to compliance of Nexon's included SLA's and support coverage.	R, A	C, I
Provide base, remote support for all Nexon-provided managed services inclusions, associated end-users and devices.	R, A	C, I
As approved by NobleOak, provide ad-hoc on-site support for all Nexon-provided managed services inclusions • Time & Materials, as per rate card	R, A	C, I
As per agreed schedule, provide onsite support services using mutually agreed Nexon technical resources	R, A	C, I
Provide necessary and appropriate access for actioning Nexon consultants / engineers to any relevant sites, networks, equipment, documentation, diagrams, data, information, accounts, and systems for Nexon to be able to carry out any required scope of works and services.	C, I	R, A

9.4 User Management

Task	Nexon	NobleOak
General Ticket Management		
Receive ticket from user via defined channels • Phone, Email, Portal, Chat	R, A	C, I
Communicate ticket status updates to users as per defined frequencies and methods	R, A	C, I
Escalate tickets that cannot be resolved at Level 1 to the appropriate resolver group • Nexon, NobleOak Internal, NobleOak Third Party	R, A	C, I
Comply with associated ITIL responsibilities	R, A	R, C, I
Perform remote diagnosis and resolution activities • Level 1 only • General technologies + NobleOak-provided SOP	R, A	C, I
Identify approved VIP users	C, I	R, A
Grant Nexon appropriate authority to escalate tickets to NobleOak Third-Parties on behalf of NobleOak.	C, I	R, A
Workstation and Supported OS		
Troubleshoot failures & error messages	R, A	C, I
Operating system feature assistance	R, A	C, I
Drivers & BIOS / Firmware • Update as per mutually agreed criteria and defined schedule	R, A	C, I

Task	Nexon	NobleOak
Monitoring – Maintain & Troubleshoot	R, A	C, I
Alert reviews	R, A	C, I
OS Rebuild / Reset • Time & Materials, as per rate card	*R, A	C, I
Onsite assistance with remote troubleshooting	C, I	R, A
Workstation and Supported OS – Network Connectivity		
Device physical connectivity to the wired or wireless network	R, A	C, I
Device Internet Connectivity	R, A	C, I
VPN Client (corporate connection)	R, A	C, I
SaaS application connectivity	R, A	C, I
Carrier troubleshooting (fixed or wireless)	-	R, A
Home network device (router / modem)	-	R, A
Workstation and Supported OS – Patching		
Maintain OS patching at agreed level • Monthly patching as standard • Expedited out-of-cycle patching for critical patches meeting agreed criteria.	R, A	C, I
Maintain Office Apps patching at agreed level • Monthly patching as standard • Expedited out-of-cycle patching for critical patches meeting agreed criteria.	R, A	C, I
Maintain third-party apps patching at agreed level • Includes apps supported by automated N-Central updates, or as otherwise mutually agreed. • Monthly patching as standard • Expedited out-of-cycle patching for critical patches meeting agreed criteria.	R, A	C, I
Maintain apps patching at agreed level • Those not supported by Nexon's automated systems • Time & Materials, as per rate card	*R, A	C, I
Major version upgrades (e.g., Windows 10 to 11) • Time & Materials, as per rate card	*R, A	C, I
Workstation and Supported OS – Applications (Core Apps and Microsoft Office)		
Application launch and crashing issues	R, A	C, I
Application reinstallation	R, A	C, I

Task	Nexon	NobleOak
Best-effort, Basic application operations troubleshooting • E.g., file won't save, add-in doesn't load, save to PDF, preview doesn't work	R, A	C, I
Specific application operations troubleshooting • E.g., Macros, document formatting, spreadsheet formulas • Can be provided at T&M if mutually agreed	-	R, A
Core apps include MS Office, Browser (Edge / Chrome), PDF Reader (Adobe)		
Workstation and Supported OS – Applications (Other / Line of Business)		
Application launch and crashing issues	R, A	C, I
Application reinstallation	R, A	C, I
Application operations troubleshooting • E.g., password resets, settings within the application	-	R, A
Workstation and Supported OS – Endpoint Security		
Monitoring – Maintain & Troubleshoot	R, A	C, I
Alert reviews	R, A	C, I
Maintain and troubleshoot server agent and SaaS portal settings • Policies, definition updates, agent deployment status	R, A	C, I
Security Incident Response – Containment, forensics, clean up, mitigation • Can be completed as T&M if mutually agreed unless included in a separate service	C, I	R, A
Microsoft Defender, Microsoft Defender, BitDefender or as otherwise mutually agreed only		
Workstation and Supported OS – Warranty		
Best-effort liaison with vendor for hardware warranty	R, A	C, I
Corporate device + under warranty or support contract only		
Mobile Device		
Best-effort, Basic Standard Business apps troubleshooting • E.g., Outlook, Teams, Microsoft Authenticator, Microsoft Word	R, A	C, I
Customer Business apps installation / reset / reinstall	R, A	C, I
Customer Business apps functionality • Can be provided at T&M if mutually agreed	-	R, A
Non-business apps	-	R, A

Task	Nexon	NobleOak
Includes user related support, not device support		
Peripherals		
Troubleshoot basic connectivity & error messages for supported / approved devices • E.g., UC headset, keyboard, mouse, monitor, printer	R, A	C, I
Reinstall drivers	R, A	C, I
Feature troubleshooting	-	R, A
Onsite assistance with remote troubleshooting	C, I	R, A
User Account Management / Identity		
User Accounts – Create / Modify / Disable / Delete • Including assignment of Microsoft Subscriptions	R, A	C, I
Password reset in AD DS / Entra ID	R, A	C, I
Security Groups – Creation / assignment / deletion	R, A	C, I
Microsoft MFA variants – Maintain & Troubleshoot	R, A	C, I
Microsoft MFA user enrolment	C, I	R, A
Microsoft Single Sign-On – Maintain & Troubleshoot	R, A	C, I
Microsoft Self Service Password Reset – Maintain & Troubleshoot	R, A	C, I
Password Policies – Maintain & Troubleshoot	R, A	C, I
Group Policies – Maintain & Troubleshoot	R, A	C, I
Conditional Access Policies – Maintain & Troubleshoot	R, A	C, I
Entra ID Connect – Maintain, Monitor & Troubleshoot	R, A	C, I
Active Directory Domain Services – Maintain & Troubleshoot • AD Servers must be under management as a Nexon Managed Server	R, A	C, I
Microsoft 365		
Subscription management (Commercial, Nexon CSP)	R, A	C, I
Subscription management (Commercial, not Nexon CSP)	-	R, A
Subscription management (Operational)	R, A	C, I
Support Management – Best-effort liaison with Microsoft Support for platform issues	R, A	C, I

Task	Nexon	NobleOak
Regular review and advisory • Secure Score (quarterly) • Mailbox Quotas (quarterly) • Accounts - privileged, departed, guest (semi-annual + ad-hoc) • Subscription Quantity (annually – pre-NCE anniversary)	R, A	C, I
Regular review and advisory • Subscription Optimisation • Can be provided at T&M if mutually agreed	C, I	R, A
Microsoft 365 – Exchange Online		
Mailbox – Create / Change / Delete • User, shared, resource	R, A	C, I
Mailbox permissions – Maintain & Troubleshoot	R, A	C, I
Mail flow settings management • E.g., SMTP relay, Custom connectors	R, A	C, I
Mail flow investigation	R, A	C, I
Distribution lists and contacts – Create / Change / Delete	R, A	C, I
Anti-spoofing (SPF records, DKIM, DMARC) - Maintain & Troubleshoot	R, A	C, I
Archiving policy – Maintain & Troubleshoot • In-built Exchange Online capability, as licensed	R, A	C, I
Archiving policy – Maintain & Troubleshoot • Third-party solution • Additional charges and mutual agreement apply for Nexon management unless included in a separate service	-	R, A
Email Security – Maintain & Troubleshoot • Exchange Online Protection or Microsoft Defender for O365	R, A	C, I
Email Security – Maintain & Troubleshoot • Third-party solution • Additional charges and mutual agreement apply for Nexon management unless included in a separate service	-	R, A
Microsoft 365 – SharePoint Online & OneDrive for Business		
OneDrive Client Application - Maintain & Troubleshoot • Nexon managed workstation only	R, A	C, I
Best effort, Basic support of in-built functionality • E.g., document libraries, lists, pages	R, A	C, I
Assignment of permissions via groups	R, A	C, I
Creation and Management of Sites and Collections • Additional charges and mutual agreement apply for Nexon management unless included in a separate service	-	R, A

Task	Nexon	NobleOak
Creation and Management of customer-specific configurations and applications deployed within SharePoint / OneDrive. • Additional charges and mutual agreement apply for Nexon management unless included in a separate service	-	R, A
Microsoft 365 – Teams		
Troubleshooting	R, A	C, I
App permissions management	R, A	C, I
Policies & organisation-wide settings – Maintain & Troubleshoot	R, A	C, I
Teams Voice / Phone System - Maintain & Troubleshoot • Additional charges and mutual agreement apply for Nexon management unless included in a separate service	-	-
Microsoft 365 – Defender for Office 365		
Troubleshooting	R, A	C, I
Alert reviews	R, A	C, I
Policies – Maintain & Troubleshoot	R, A	C, I
If capability licensed and available only		
For deployed and supported services only (Exchange Online, SPO, ODB, Teams)		
Microsoft 365 – Backup		
Backup Services - Maintain & Troubleshoot • Additional charges and mutual agreement apply for Nexon management unless included in a separate service	-	-

9.5 Azure Cloud Management - Standard

Customers aligned to the Standard services are using “cloud native” applications, deploy their infrastructure in the cloud using automation tools, and deploy new instances or versions rather than patch or troubleshoot individual workloads. They use advanced services which have some management actions abstracted and performed by Microsoft (Platform as a Service – PaaS).

- Nexon’s Standard managed services include:
- Monitoring of the Azure tenancy
- Management of Core features
- Including nominated stateful virtual machines
- Support of other features
- Including liaison with Microsoft using NobleOak’s existing support contract
- Security Center (Microsoft Defender for Cloud) – alerting & response
- Cost reporting & alerting

- Regular review:
  - Azure Advisor recommendations (Quarterly)
  - New feature review and recommendations (Semi-annual)
- Access to specialist Azure technical resources
- Escalation back to NobleOak for unsupported services.

Pricing for the Standard managed service is a percentage of NobleOak's monthly Azure bill.

NobleOak will remain responsible for their own application management, database administration (e.g., data structure, indexing, query optimisation), software development, and release management (including management of any CI/CD pipelines and tooling). Nexon will assist with troubleshooting issues within related Azure features (e.g., serverless, containers, PaaS services) where required.

Nexon will support the Microsoft Azure services listed within the RACI Matrix below. Some solution-focused or SaaS services require their own separately quoted managed service, e.g., Microsoft Sentinel, Azure Virtual Desktop, Azure Stack, Azure Site Recovery Manager (when used with on-premises servers), etc.

Where a new Microsoft Azure service is introduced to the in-scope subscriptions by NobleOak, Nexon will review the support requirements for this new service and advise whether it will be incorporated within the existing Azure Managed Service model, require a separately quoted service, or out of scope.

Upon request and at its discretion, Nexon may provide ad-hoc support for services that are not listed within the Roles & Responsibilities table on a time & materials basis.

Services will be supported when the service is used in relation to another Nexon-supported service. Where the supported service is used in relation to an unsupported service, Nexon will still assist but service levels will not apply.

Activities	Included	Nexon	NobleOak
Organisation Account Management			
Azure Account [1]	CSP+SDM [1]	C, I	R, A
Azure Users Creation and Deletion [2]	✓	R, A	C, I
Cost Management & Billing [1]	CSP+SDM [1]	C, I	R, A

Azure Load Testing [16]	Request [17]	C, I	R, A

[1] Included when licensed under CSP Subscription managed by Nexon and where a Service Delivery Manager service is in place.

[2] Azure Administrative users only. NobleOak's end users are NobleOak's responsibility.

[3] NobleOak must ensure applicable support agreements are in place and maintained by NobleOak, with Nexon authorised to act on NobleOak's behalf.

[4] Monitoring alerts related to Azure services that are not under Nexon management will be referred to NobleOak for diagnosis and resolution.

[5] Nexon's Managed Services Host is a virtual machine used for event detection and statistical reporting. The VM must be deployed within NobleOak's Azure tenancy and will consume resources at NobleOak's cost. System specifications vary based on the number of resources and VM's to be monitored. Indicative specifications are available on request or will be provided during Transition & Onboarding.

[6] Azure Active Directory is NobleOak's responsibility (unless included as part of another contracted service), however Nexon must be consulted and informed before any configuration changes are made that may impact Nexon-managed resources.

[7] Quarterly review as part of Service Delivery reporting, for Azure resources only.

[8] Stateful Azure Virtual Machines are deployed as a traditional static operating system with manually installed and configured applications & settings and require the full suite of ITIL

management services. The equivalent of Nexon's Virtual Machine OS managed service will apply to each Stateful VM that is requested for onboarding.

[9] Stateless Azure Virtual Machines are deployed through automation pipelines and are redeployed rather than patched or managed.

[10] Azure Site Recovery Manager activities include basic status checks, troubleshooting, support, and management for Azure to Azure only. When Site Recovery Manager is used for external workloads replicating into Azure, a separate Azure Site Recovery Manager managed service is required.

[11] NobleOak is responsible for defining backup policy, Nexon responsible for configuration.

[12] Excludes third-party firewalls running in Azure (e.g., Palo Alto, Fortinet) whether purchased directly or through the Azure Marketplace, unless covered under a separate Firewall managed service.

[13] Excludes carriage provision and CPE management, unless covered under a separate Nexon service.

[14] Excludes management of remote end / devices / users, unless covered under a separate Nexon service.

[15] Database Administration activities for Azure SQL Database, Azure SQL Managed Instance, and Technical / Functional activities for SQL Server on Azure VM are excluded unless the instance is covered by a separate Nexon DBAaaS service.

[16] Nexon must be informed of any Load Testing being performed and resulting alerts and incidents will be handled on a Request basis.

[17] Items marked with Request are standard inclusions of the service but are only completed one receipt of a written request and billed on a Time and Materials basis.

[18] Recovery of this data may incur additional Azure consumption fees relating to transferring, storing and processing the historical backup files to enable the recovery.

9.6 Database Management

Tasks	Nexon	NobleOak
Provide remote management and monitoring tools	R, A	C, I
Provide management of the SQL Platform Environments – OS and DB Platform, Physical Hosts (as applicable), Storage & Networking Services (as applicable) by performing the following: • Daily Tasks – Ensure that all services are up and running – Check the Windows Application Event Log for error messages – Check for adequate disk space for growing database files and log files – Check SQL Server jobs (look for failures) – Check Database backups for successful completion – Check the SQL Server logs for error messages – Check the SQL Agent logs for error messages – As applicable, monitor Windows, Oracle and SQL Server counters in System Monitor to ensure optimal performance	R, A	C, I

– Track locking, blocking, deadlocks, long-running queries, and high-resource queries – Resolve any assigned issues and document the process – Generate daily summary report • Weekly Tasks – Check Database Statistics – Check physical and logical fragmentation as applicable – Monitor unused space from data and log files – Evaluate application and server performance – Generate weekly summary report • Monthly Tasks – Perform monthly Health check – Compare performance statistics with baseline statistics – Prepare capacity forecast – Generate monthly summary report		
Ensure and maintain appropriate levels of SQL Database security	R, A	C, I
Ensure and maintain appropriate authorised operator access levels of SQL Databases	R, A	C, I
Manage software and hardware solutions as applicable within the Infrastructure Platform, up to the DB services level (SQL OS and DB Platform, Physical Hosts, Storage & Networking Services)	R, A	C, I
SQL configuration standard document version, reviewed and maintained by Nexon	R, A	C, I
Initial troubleshooting and problem determination of SQL Database issues.	R, A	C, I
As required, provide Third Party and Vendor Management for SQL Databases, including escalating and managing issues or support requests with ticket lifecycle management (from initial logging through to resolution).	R, A	C, I
Administration of databases under the DBMS or database platform level (tables, indexing, etc) is excluded (sold separately)	C, I	R, A
Beyond anything explicitly outlined within this proposal as being provided by Nexon, procure, purchase, provide and manage/support all hardware, software, solutions, services, licenses and support contracts.	C, I	R, A

9.7 Network Device Management

Task	Nexon	NobleOak
Troubleshoot failures & error messages	R, A	C, I
Firmware • Update as per mutually agreed criteria and defined schedule	R, A	C, I
Monitoring – Maintain & Troubleshoot	R, A	C, I
Alert reviews	R, A	C, I
Liaise with vendor for hardware warranty	R, A	C, I
Onsite assistance with remote troubleshooting	C, I	R, A
Configuration (if applicable) – Maintain & Troubleshoot • Physical (e.g., physical stacking, port connectivity, power) • Virtual (e.g., policies, packet flow and rulesets)	R, A	C, I
Configuration backups (if applicable) • Monthly backups • Restore as required	R, A	C, I

9.8 Disaster Recovery as a Service

Nexon will provide a fully managed Disaster Recovery service, catering for the DR platform management and management of the workload level replication and failover configurations.

Service Tiers available are outlined below:

DR as a Service Tier	Min RPO[1]	Min RTO[2]	DR Test
Foundation	1 Hour	4 Hours	Annual, non-disruptive
Advanced	15 Minutes	4 Hours	Annual, non-disruptive
Premium	<1 Min	2 Hours	Semi-annual, non-disruptive

[1] Assumes sufficient replication bandwidth is available to cater for the rate of change.

[2] Recovery Time measurement begins when the decision is made to failover.

NobleOak is responsible for providing information about their DR requirements to enable Nexon to manage their DR capability (upfront for the initial configuration and ongoing to cater for any changes that occur in the environment). This information must include:

- System mappings describing the VMs dependencies of each business system, a system may also be dependent on other systems.
- Recovery order for each system and the workloads that it is dependent upon.
- Communication preferences and representatives that will play a role in failover decisions, testing and application-level recovery activities (these occur after the VMs have been cutover to the secondary datacentre)

Tasks	Nexon	NobleOak
Adhere to compliance of included SLA's and support coverage.	R, A	C, A
With the assistance of NobleOak, maintain DR plan for environment and associated in-scope components.	R, A	R, C, I
Schedule DR tests with 30 days' notice.	C, I	R, A
Participate in DR testing, one test provided per year.	R, A	C, I
Alongside NobleOak, drive the implementation and reversal of DR plan processes and procedures for the in-scope Virtual Guest Servers (VM-level only) and associated storage.	R, A	R, C, I
Coordinate cross-functional Disaster Recovery testing of the environment • Data and User Acceptance Testing	C, I	R, A
Applications level recovery activities and testing.	I	R, A
As required, assist Nexon with engagement of third-party application vendors to assist with invoking DR and participating in DR tests.	C, I	R, A
3rd Party Application integration, implementation, management and support	C, I	R, A
Provide all information required to complete the initial configuration and manage changes throughout the service term, including but not limited to: • System dependencies and workload start-up ordering • DR Objectives • Names and roles of representatives that will play a part in the DR capability	C, I	R, A

9.9 Quarterly Strategic Insights and IT Roadmap Planning

Task	Nexon	NobleOak
In collaboration with NobleOak and on a quarterly basis, conduct a Strategic Insights Session with key NobleOak stakeholders and engage in collaborative IT roadmap planning sessions/workshops. The aim of these sessions/workshops is to assist with driving continuous transformation and optimisation of NobleOak's IT environment, with respect to optimal alignment with NobleOak's evolving business and operational requirements. • Once per quarter (4x throughout each 12-month contract year).	R, A	R, C, I

9.10 Service Level Agreement (SLA's) and Support Coverage

Task	Nexon	NobleOak
Provide and maintain Nexon's included SLA's, associated support coverage and compliance for all included Nexon-provided management/support services.	R, A	C, I
Maintain and ensure the availability of appropriate support team (Onshore - Australia), Service Desk agents, engineers, and resources for the included support coverage.	R, A	C, I
Adhere to all relevant response and resolution times with respect to support coverage and incident priority levels.	R, A	C, I
Track, document and report upon monthly response and resolution to NobleOak.	R, A	C, I

9.11 ServiceNow ITSM Lite – Silver package

ServiceNow ITSM Lite is a multi-tenant based solution managed and hosted by Nexon.

The core components our ServiceNow IT Service Management solution include:

- **Self Service:** End Users can access the suite of online services via a catalogue, knowledge articles and keep track of their cases in a single spot using self service
- **Workflow:** Ability to deliver and process work in a structured controlled manner whilst reporting progress from initiation to completion in a single system of action
- **IT Processes:** Modules to support Incident, Problem, Change, Service Requests, CMDB within a single data model and platform to support the operation of an IT environment;
- **Security:** Users can only access forms and function as their user profile has access to in a secure environment
- **Dashboards and Reporting:** ServiceNow's ability to utilise data on the platform for dashboarding and reporting purposes places it in an ideal position to keep track of cases, workflows and service agent's workload, as well as Service Level Objectives and Performance

Incident

Log incidents
Classify incidents by impact and urgency to prioritise work
Assign to appropriate groups for quick resolution
Investigate and diagnose
Resolve the incident and notify the user who logged it
Apply additional coordination and communication methods for major incidents
Monitor, track, and analyse service levels and improvement

Problem

Log problems
Co-ordinate the resolution of problems
Publish known errors
Identify, share and search for workarounds
Assign to appropriate groups for investigation and root cause analysis
Resolve the problem and notify stakeholders

Change

Raise changes
Establish an accurate level of risk
Seek relevant approval
Schedule at the optimum time
Authorised at Change Advisory Board
Implement and review the outcome
Raise frequent, low risk changes through a faster lifecycle
Recognize emergency changes

Catalogue

Define, maintain and retire catalog items
Define and maintain a catalog structure, entitlements and approval workflows
Define and measure fulfillment duration
Track fulfillment progress, follow up and receive updates via portal
Get notified via email
Manage and measure requests using a dashboard

Portal

An online ordering system for goods and services
Accessible online anywhere, any device
Access Service Catalogue
Log Incidents
Access Knowledge
Track Requests

Reporting

Reporting and Performance Analytics
Gain insight into request and incident volumes
Measure performance using SLAs
Prioritise work
Identify Issues

Knowledge

Share and Publish Organisational Knowledge
Publish and Retire Content
Access Content
Searchable

Service Desk

Support the Help Desk Operation
Record Incidents, Requests, Phone Calls, Enquiries, Emails
Support Multi Channel
Notifications

Task	Nexon	NobleOak
Onboarding of NobleOak to Nexon ServiceNow Platform	R, A	R, C
Provide access to and manage mutually agreed integration endpoints	C, I	R, A
Advise Nexon of named NobleOak users who need Fulfiller and/or Business Stakeholder licenses assigned	C, I	R, A
Perform ServiceNow platform administration, upgrades, and maintenance	R, A	I
Provide ITSM platform based on a ServiceNow Pro feature set. Features include: • Operate in the same ServiceNow instance as Nexon, allowing tickets to easily be assigned between NobleOak and Nexon • Single Sign on using NobleOak authentication platforms (SAML 2.1 Support) • Service Portal and Service Catalogue (Up to 5x basic Catalogue Items included) • IT Process Support for Incidents, Problems, Changes and Requests, and CMDB Lite • Enhance and mature your IT operation with future capability like integrated CMDB, catalogue expansion and further automations	R, A	C, I
Perform mutually agreed NobleOak-specific enhancements • Time & Materials or project, as per rate card	R, A	C, I
Provide access to Incident (INC), Problem (PRB), Change (CHG), Service Request (REQ), Standard SLAs, Standard Reporting, Standard Knowledge	R, A	C, I
Allow creation of Incidents / Requests from Inbound email via a single email address	R, A	C, I
Basic NobleOak User data for Users/Groups via Microsoft AzureAD/AD and SAML based Single Sign On	R, A	C, I
Provide NobleOak Branded Portal and 5 Catalogue Items	R, A	C, I
Support CMDB integration with NobleOak's Microsoft Endpoint Manager / Intune environment	R, A	C, I

9.12 Security Services

9.12.1 SOC Service SLA and RACI

When operational incidents occur within the SIEM data collection and analysis ecosystem, Nexon will analyse the event and subsequent events to ascertain whether it is a genuine issue e.g. skipped scheduled searches, event collection interruptions or an issue where no further action is needed, e.g. single sub-second monitoring interruptions. Each potential issue being observed will have its own timespan of analysis. Once analysis has been completed and a potential issue is categorised as an incident, Nexon will invoke the notification process to NobleOak personnel. The SLA for this part of the process is within 30 minutes.

The following table lists out the availability SLA's that can be expected of the managed SIEM service.

Metric	Value
Uptime SLA (HA environment)	99.9% in any given month

When operational incidents occur within Elastic SIEM, Nexon will analyse the event and subsequent events to ascertain whether it is genuine. Each potential issue being observed will have its own timespan of analysis. Once analysis has been completed and a potential issue is categorised as an incident, Nexon will invoke the notification process to NobleOak personnel.

9.12.1.1 Operational Monitoring

Tasks	NobleOak / Nexon Service Desk	Nexon SecOps
Raise service request if monitored components are changed	R, A	C, I
Implement requested changes to monitoring, or changes initiated by supplier	C, I	R, A
Implement monitoring of key service components, and data sources.	I	R, A
Respond to alerts and restore service.	C, I	R, A

9.12.1.2 Security Monitoring

Tasks	NobleOak / Nexon Service Desk	Nexon SecOps
Manage detection rules and analytics use cases to support security event detection and alerting	I	R, A
Review/investigate/respond to alerts indicating a security event or phishing report	C, I	R, A
Develop and Maintain NobleOak-specific Use Cases	C, I	R, A
Deploy new detection rules which match Use Cases	I	R, A
Maintain Mitre ATT&CK Model	I	R, A, C
Create Monthly SIEM Report / Summary	I	R, A, C
Alert Tuning	C, I	R, A
Response to alerts, managing alert statuses and investigations.	A	R, A
Raise service requests to request new relevant data sources	R, A	C, I

Tasks	NobleOak / Nexon Service Desk	Nexon SecOps
Implement new relevant data sources. Create custom integrations as agreed.	C, I	R, A
Monitor and respond to logging failures for key data sources	C, I	R, A, C
Deploy Microsoft Agent to New endpoints	R, A	C, I
Deploy, Maintain and Monitor Logging Status	I	R, A
Develop and Maintain NobleOak-specific Use Cases	C, I	R, A

9.12.1.3 Security Incident Management

Tasks	NobleOak / Nexon Service Desk	Nexon SecOps
Complete Security Incident Analysis, provide situation report at agreed cadence.	C, I	R, A
Gather artefacts, and complete Forensic Analysis & Evidence Collection per service description using pre-deployed tools. Provide incident report.	C, I	R, A
Seek approval prior to exhausting included hours.	I	R, A
Provide T&M approval after included hours	R, A	C

9.12.1.4 Security Analysis and Forensics

Tasks	NobleOak / Nexon Service Desk	Nexon SecOps
Complete Security Incident Analysis, provide situation report at agreed cadence.	C, I	R, A
Gather artefacts, and complete Forensic Analysis & Evidence Collection per service description using pre-deployed tools. Provide incident report.	C, I	R, A
Support containment, eradication, and recovery phases, providing ongoing analysis, validation of remediation activities, and recommendations.	C, I	R, A
Seek approval prior to exhausting included hours.	I	R, A
Provide T&M approval after included hours	R, A	C

9.12.1.5 Log Management

Tasks	NobleOak / Nexon Service Desk	Nexon SecOps
Onboard ingest of relevant & compatible security log sources	C, I	R, A
Monitor and respond to logging failures	C, I	R, A
Provide details of new technologies or infrastructure deployed, to enable collection	R, A	C, I

9.12.1.6 Customised Threat Intelligence including DarkWeb Monitoring

Tasks	NobleOak / Nexon Service Desk	Nexon SecOps
Threat Intelligence Alert Response	I	R, A
Create threat intelligence summary report specific to Client threat profile	C, I	R, A
Curate Recorded Future threat intelligence platform	C, I	R, A
Provide updates to key suppliers, industry verticals, industry peers to Nexon to enable curation	R, A	C, I
Review Threat Intelligence Sources	I	R, A
Collection and dissemination of threat intelligence to relevant SOC systems and for use by prevention and detection technologies, e.g. firewall rules, EDR policies, SIEM, SOAR	I	R, A
Collection and dissemination of threat intelligence to relevant SOC systems and for use by prevention and detection technologies, e.g. firewall rules, EDR policies, SIEM, SOAR	I	R, A
Perform analysis of threat intelligence as necessary in response to alerts or as part of incident response activities necessary to support the service within the Client environment	I	R, A

9.12.2 SASE Managed Services

Task	NobleOak / Nexon Service Desk	Nexon SecOps
As required and applicable, provide Nexon with appropriate access to associated existing environmental components, infrastructure, tenants, portals and accounts to enable Nexon-provided ongoing management moving forward.	R, A	C, I
Provide ongoing configuration management, troubleshooting and support of SASE infrastructure	C, I	R, A
Configuration of monitoring and alerts for in scope services	C, I	R, A
Maintenance of As-built/associated documentation.	C, I	R, A
3rd Party Application integration, implementation, and support	R, A	C, I

9.13 Genesys Contact Centre – Nexon Managed Service

Task	Nexon	NobleOak
Raise support tickets • Service and Incident tickets to be raised via Phone or email. Service Ticket - new work, Incident Ticket - issue\fault. To be classified by Nexon	C, I	R, A
Data Integrity • Maintaining, updating, and verifying the accuracy of data supplied by NobleOak.	C, I	R, A
Security management of NobleOak's third-party systems, devices and providers. • Maintain and manage security of settings and credentials used for accessing access NobleOak third-party systems or providers.	C, I	R, A
Simple MAC (Moves, adds and changes) include: • Create/Edit/Remove users, phones, extensions and in dial numbers. • Modify user skills and permissions • Modify divisions, groups, locations, profiles • Modify contact centre objects includes ACD skills, utilisation, queues, wrap-up codes • Add/Modify canned email response • Modify schedule groups and schedules • Add/Delete/Activate emergency group • Create/Edit/Delete dashboard metrics and graphs from standard metric available • Run reports using standard report template • Create/Edit/Delete inbox and alert rules • Nexon includes simple MACs as part of the Managed Services. Simple MACs include new objects creation and simple configuration changes, which do not require discovery, data collection, scoping, design, validation and testing. Complex configuration changes require more than 4-hour professional services effort will be deemed as new project work.	R	A
Provide maintenance, support and remote access accounts for Nexon support if required.	C, I	R, A
Provide test account for testing new project work and configuration changes.	C, I	R, A
Ticket\Project decision for new work • Any work involves discovery, data collection, scoping, design, enable new functionalities and/or complex configuration changes requires more than 4-hour professional services effort will be deemed as new project work.	R, A	C
Import/Update system and user prompts, announcements and MoH. • Recorded voice prompts to be supplied by NobleOak or generated from assigned TTS engine.	R	A
Import/Edit/Delete data tables • NobleOak data collection and validation required. Nexon professional services will be engaged to quote for the project work.	R, A	C

Create new queue • NobleOak data collection, design validation required. Nexon professional services will be engaged to quote for the project work.	R	C, A
Create/Modify interaction flow, routing and flow outcomes • NobleOak data collection, design validation required. Nexon professional services will be engaged to quote for the project work.	R, A	C, I
Create/Modify custom reports • Nexon professional services will be engaged to quote for the custom report creation/modification as project work.	R, A	C
Create/Modify agent scripts and/or script templates • Nexon professional services will be engaged to quote for the script creation/modification as project work.	R, A	C
Create/Modify outbound dialler workflows and associated configuration • Nexon can assist customers with outbound campaign and list management creation/modification as project engagement.	C	R, A
Create/Modify quality admin encryption keys, evaluation forms, and policies • Nexon can assist customers with evaluation form creation/modification as project engagement.	C	R, A
Create/Modify survey evaluation forms • Nexon can assist customers with survey form creation/modification as project engagement.	C	R, A
Create/Modify interaction recording policies • Simple policies configuration changes is included as part of Nexon Managed Services. Complex polices creation/modification requires validation/testing will be deemed as new project work.	R, A	C
Create/Modify WFM management units, short-term forecasts, schedules, activity codes, day classifications. • Nexon can assist customers with Workforce Management configuration, forecasts and schedule as project/consulting engagement if required.	C	R, A
Escalation to vendor support • Escalation to vendor support is only required if the root cause is identified as a vendor issue.	R, A	C, I
Escalation to Nexon carrier providers • Escalation to Nexon carrier provider support is only required if the root cause is identified as Nexon supplied carriage issue.	R, A	C, I
Escalation to third party carriers • Reporting of faults and management of customer on-premises trunks with a third-party carrier.	C, I	R, A
Supporting any third-party systems, applications, devices and/or network connectivity not managed by Nexon • Customers are responsible for any third-party systems, applications, devices and/or network connectivity not provided/managed by Nexon.	I	R, A

10 Investment Summary

10.1 Transition & Onboarding – Once-off

Description	Qty	Upfront Unit Fee ex GST	Upfront Total Fee ex GST
Cloud Services – Design, Build, Migration, Transition & Onboarding	n/a	n/a	$173,840.00

Desktop Engineer • Per Day (8 hours) • 2x ½ days per week, 50 weeks per year • Averaged to 4.25 days per month • Day rate – additional time for the same resource can be added at the same rate if scheduled 1+ weeks in advance	4.25	$1,520.00	$6,460.00
		Total ex GST	**$62,647.55**

Additional Usage Fees for items will be the same as the identified Monthly Unit Price. If required, Onboarding for additional managed devices will be performed on a Time & Materials basis (unless otherwise agreed).

"Variable" Items – Items noted as "Variable" will be billed each month based upon usage extracted by Nexon, subject to the Minimum Monthly Fees. Other items may vary based upon a Service Request from NobleOak.

10.2.2 Network Links – Monthly

Description	Qty	Monthly Unit Fee ex-GST	Monthly Total Fee ex-GST
Service Delivery Management			
Primary - Fast Fibre • Suite 1, Level 4, 44 Market St, Sydney NSW 2000 • Bandwidth: 1000Mbps • Unlimited Internet	1	$967.57	$967.57
Secondary - NWB – NBN FTTB • Suite 1, Level 4, 44 Market St, Sydney NSW 2000 • Bandwidth: 100/40 Mbps • Internet	1	$120.00	$120.00
		Total ex GST	**$1,087.57**

10.2.3 Subscription Services- Monthly

10.2.3.1 Subscriptions – Microsoft CSP inc. Azure

Subscriptions are subject to separate terms – the Microsoft Subscription Terms of Service. All subscriptions are subject to Microsoft's then-current pricing, any change to which will be communicated to NobleOak. Quantities and fees below are correct at the time of preparing this proposal and the indicated cloud related spend based on the in-scope components and services after optimisation.

Under the CSP program Nexon passes on billing from Microsoft which is subject to change and calculated by consumption. Actual invoiced quantities and prices will be as reported to Nexon by Microsoft. Nexon will provide a 5% discount from Microsoft's then-current list pricing for the term of this SOW on "Microsoft CSP – Subscriptions (NCE)" items only.

Where existing subscriptions are unable to be moved from the existing MSP to Nexon, NobleOak and existing MSP will remain responsible for those subscriptions until the next expiration / anniversary date and any auto-renew provisions. Nexon is able to provision new subscriptions (or additional licenses for existing subscriptions) in parallel to existing entitlements.

Monthly Commitment for Microsoft CSP Subscriptions is available at a higher price, quoted on request.

Description	Qty	Monthly Unit Fee Ex-GST	Monthly Total Fee Ex-GST
Microsoft CSP – Subscriptions (NCE) ***(includes 5% discount)***			
Microsoft 365 Business Premium • Annual Subscription, Monthly Billing • 12-month commitment, auto renew	150	$31.26	$4,689.00
Exchange Online (Plan 1) • Annual Subscription, Monthly Billing • 12-month commitment, auto renew • *for active shared mailboxes >50GB*	5	$5.70	$ 28.50
Office 365 Data Loss Prevention • Annual Subscription, Monthly Billing • 12-month commitment, auto renew • *for active shared mailboxes*	100	$4.28	$ 428.00

		Monthly Estimated Total Ex GST:	**$21,427.09**

10.2.3.2 Amortised Infrastructure and Licenses

Amortised Services apply where NobleOak acquires a product or service which requires a one-time purchase (upfront, annual, triennial, etc) and Nexon provides this to NobleOak as a monthly fee over the committed term.

Prior to the end of an Amortised Payment Period, Nexon will provide NobleOak with a quotation for a subsequent term (if the relevant product or service is required). If additional units are required, these will not be at the Unit Fee listed below - Nexon will prepare a quotation and may be subject to minimum purchase quantities.

The Monthly Fee specified below is based on the named product and has been calculated for payment over a defined period ("the Amortised Payment Period") including finance costs ("the Amortised Services Fee").

The Amortised Services Fee shall commence on and from the date the product or service is issued. If for any reason the SOW is terminated prior to the completion of the Amortised Payment Period then the Amortised Services Fee for the remainder of the Amortised Payment Period will become due and payable immediately.

Description	Qty	Monthly Unit Fee Ex-GST	Monthly Total Fee Ex-GST
Fortinet FortiGate VM02V – Virtual Appliance • 2 CPU Cores, Unlimited RAM • 36 Months UTP, IPS, Advanced Malware Protection, Application Control, URL, DNS Filtering, Video Filtering, Antispam & FortiCare Premium • Amortised Payment Period: 36 Months	2	$382.00	$ 764.00

		Monthly Estimated Total Ex GST:	**$3,920.52**

10.3 Genesys Contact Centre - Indicative

10.3.1 Professional Services – Once-off

Product Description	Upfront Total Fee ex GST
Core Contact Centre Solution Deliverables:	
Nexon Professional Services to implement Genesys Cloud CX Contact Centre Solution includes: • Nexon AnySIP trunk configuration with Genesys BYOC Cloud deployment • Contact Centre design and configuration workshops. • Genesys Cloud user configuration • Inbound IVR call flow, voice prompt, and queue configuration. • Callback in queue function • Custom Agent Scripting • Call Recording • Configure Quality Management • Dashboard and Standard Reports • Configure Active Directory / SSO Integration • Outbound Dialler Campaign Configuration – Advanced • Post Interaction Surveys • SMS Routing • Webchat – Base Deployment • CRM integration – Dynamics standard integration • Workforce Management – Essentials Setup • Up to 2 days end user training • System Integration Testing • Up to 2-days UAT support • System Cutover and Go Live • Post Cutover Support • As-built documentation • Project Management	$120,000.00
Professional Services Reduction • Special Negotiated Reduction for 36-month contract term & Managed Services Bundle	-$35,000.00
Total ex GST	**$85,000.00**

- Pricing for integration to Dynamics CRM is an estimate only based on current limited discovery. Final pricing will require a workshop to determine the exact nature of integration.
- Pricing for Workforce Management is based on setting up Schedules without Forecast (based on current rosters) and Real time / Historical Adherence setup.

10.3.2 Core Solution – Monthly

Calculated Fees

Calculated fees are the summary of the scope and quantity in the subsections below.

Product Description	Qty	Monthly Unit Fee ex-GST	Monthly Total Fee ex-GST
Genesys Cloud CX3 User Licenses – Named	57	$201.50	$11,485.50
Nexon CRM for Dynamics Integration – Named	57	$20.00	$1140.00
Nexon Contact Centre Managed Services including: • SIP Carrier Services • 24 x 7 Support Services • Simple Moves, Adds and Changes	57	$50.00	$2,850.00
		Total Monthly Charges (ex GST):	**$15,475.50**

Agreed Fees

Nexon's negotiated commercial offer to NobleOak is based upon an Agreed Monthly Fee for the Agreement Term, which shall serve as both a cap for the scope and quantity of services described in this document, and a Minimum Monthly Fee. Where the consumption increases, the Monthly Fee will increase at the applicable unit fee or consumption / license fee.

Year	Agreed Monthly Fee / Minimum Monthly Fee
Months 1 - 36	$12,000.00

Note:

- Genesys monthly pricing is based on 36-month commitment with annual in advance payment. Invoicing for the annual in advance payment is generated on processing of the Customer order. If NobleOak instead elects for monthly in advance payments for Genesys Cloud Licenses, then a 10% uplift will apply to the invoiced Fees for this component for the duration of this alternative payment arrangement which will be in addition to any Agreed Fees.
- All Genesys pricing is based on the Named user model.
- The pricing above excludes Nexon AnySIP carriage voice charges. Please see section 14.2 for Nexon AnySIP carriage pricing.
- Genesys includes a 4-month ramp period at the start of the contract. During the Ramp period, no cloud subscription fees are charged for Genesys Cloud CX user subscription. During the Ramp Period, you will be invoiced only for the usage of telco, Genesys Cloud CX usage-based charges, Nexon Managed Services and AppFoundry products and services (if applicable). The Ramp Period begins upon execution of the contract and the Genesys Cloud CX subscription term shall begin upon the end of Ramp Period. **Invoicing for the annual in advance payment is generated on contract execution**.
- The Genesys Cloud CX license subscription shall be governed by the Genesys Cloud Services Terms and Conditions and Genesys Cloud End User Agreement, found at: **https://help.mypurecloud.com/articles/global-genesys-cloud-service-terms-and-conditions/**. Please refer to the document for Indirect Customers.

- Please refer to the Genesys Cloud CX Feature Matrix for key features included in Genesys Cloud 1, 2 and 3 subscription packages: **https://help.mypurecloud.com/articles/genesys-cloud-feature-matrix/**
- The Nexon SIP carrier service for contact centre is based on a 1:1 agent to SIP trunk ratio. NobleOak can burst above this ratio so that at all times no calls will be blocked. If NobleOak consistently uses more than the allocated trunks Nexon reserves the right to review the pricing structure.
- Any usage above the monthly subscription will be charged at the On-demand subscription fee which is equivalent to the monthly unit cost in the table above.
- Genesys Cloud Service Levels are identified in Appendix A – Genesys Cloud CX Service Levels.
- Genesys Usage Fees and Nexon Call Rates are identified in Appendix B - Genesys Usage Fees and Nexon Call Rates.

10.3.3 Optional Components – Monthly

Product Description	Qty	Monthly Unit Fee ex-GST	Monthly Total Fee ex-GST
Genesys Cloud CX Wallboard Device Charge – Per Device	0	$19.50	$ 0.00
Nexon Absolute Fax Service (Per Service)	0	$25.00	$ 0.00
Azure Blob Storage for Vonage/ipSCAPE recordings • AU-SE-BLOB-HOT-LRS (Per GB)	0	$0.0307	$ 0.00
Azure Blob Storage for Vonage/ipSCAPE recordings • AU-SE-BLOB-COLD-LRS (Per GB)	0	$0.00773	$ 0.00
Azure Blob Storage for Vonage/ipSCAPE recordings • AU-SE-BLOB-ARCHIVE-LRS (Per GB)	0	$0.00445	$ 0.00
Total Monthly Charges (ex GST):			**$0.00**

Note:

- Genesys include one Wallboard device license as part of the Genesys Cloud Org at no cost. Additional Wallboard licenses can be purchased at the above rate.
- Azure Blob Storage (if required) is per the same Azure Plan terms as described in Section 10.2.3.1

10.4 Standard Rate Card

Any additionally required work which is outside of the scope of the included services will be charged as per the following rate card. If a resource type is needed that is not included within this rate card, that resource will be quoted at Nexon's then-current rates.

Item	Business Hours (ex GST)	After Hours (ex GST)
Project Manager	$240.00	$480.00
Change Manager	$265.00	$530.00
Senior Consultant	$265.00	$530.00
Consultant	$245.00	$490.00
Level 3	$210.00	$420.00
Level 2	$190.00	$380.00
Level 1	$150.00	$300.00
Service Delivery Manager	$210.00	$420.00
Trainer (Genesys)	$240.00	$480.00

All pricing is exclusive of GST.

The rates included herein have been made available to NobleOak to be used for any activities that are conducted by Nexon outside of the standard scope of services.

- Business Hours are from 8:00am until 6:00pm, Monday to Friday excluding Public Holidays in the location the work is being performed.
- Hour rates are based on 4-hour minimum.
  - Applies to onsite at NobleOak site only.
  - No minimum time block applies for remote work or work completed at Nexon offices.
- Travel rates apply for regional locations (> 20 km from CBD). Where a service event at a NobleOak location would be serviced by a Nexon subcontracted Field Services engineer, Nexon will provide a separate quotation.

11 Assumptions, Terms and Exclusions

11.1 Assumptions and Terms

1. Terms defined within the Master Services Agreement will have the same meaning within this document. The following additional definitions are adopted within this document:
    a. **CMDB** mean Configuration Management Database
    b. **SOC** means Security Operations Centre.
    c. **SIEM** means Security Information & Event Management.
2. All pricing is in AUD and excludes GST (unless otherwise specified).
3. Pricing is based upon a 36-month term. Fixed-price services are fixed for the Initial Term. The Standard Rate Card is subject to price review at each Contract Anniversary as per the Consumer Price Index (CPI).
4. Network Services (WAN / Internet links) subject to the applicable Network Services Schedules for Ethernet and Broadband as published at **https://nexon.com.au/terms-and-agreements/**.
5. Microsoft CSP Subscriptions shall be governed by the Microsoft Services Agreement: **https://www.microsoft.com/en-us/servicesagreement**, with any applicable product specific terms, found at **https://www.microsoft.com/licensing/terms/product/ForallOnlineServices/all** and Nexon's Microsoft Subscription Terms Of Service as attached to this Statement of Work and marked "A".
6. Genesys Cloud license subscription shall be governed by the Genesys Cloud Services Terms and Conditions and Genesys Cloud End User Agreement, found at: **https://help.mypurecloud.com/articles/global-genesys-cloud-service-terms-and-conditions/**. Please refer to the document for Indirect Customers.
7. Payments via a credit card will incur a surcharge.
8. All pricing excludes freight, delivery, travel, accommodation, installation, and configuration (unless otherwise specified).
9. The included scope will be completed remotely unless otherwise specified.
10. All project management, planning, documentation and handover activities will be completed to Nexon's standard level unless otherwise agreed in advance.
11. NobleOak (and/or any of its existing service providers / vendors) will provide and will take all reasonable steps to ensure that any of its existing service providers provide, necessary and appropriate ongoing access to Nexon and its engineers to any relevant sites, equipment, documentation, networks, accounts, information, and systems for Nexon to be able to carry out the scope of works and services listed in this agreement.
12. Ongoing management is limited and bound to the responsibility matrices, SLA's and support coverage included within this proposal, unless otherwise agreed upon by both Nexon and NobleOak in writing.
13. For all in-scope services, major changes, architectural changes, and implementing new features will be performed either on a Time & Materials basis or as a separately defined project, depending on the complexity.
14. Subject to NobleOak's prior written consent (which is not to be unreasonably withheld), Nexon may use smart hands and/or a sub-contractor to carry out some (or all) on-site work or support services.
15. Nexon can only provide best-effort / limited support for any equipment / devices / software / services which are outside of valid vendor warranty, do not have existing in-place valid support contracts, are not running a Windows Operating System, or are considered by the vendor to be End of Life (EOL) / End of Support (EOS).
16. Third Party and/or Vendor assistance and cooperation may be required for Nexon to complete some of its included responsibilities / tasks. NobleOak is responsible for ensuring all in-scope infrastructure, tools, appliances, etc. are covered by vendor support contracts with an appropriate service level for NobleOak's requirements – including onsite hardware replacement, rights to firmware & software updates, and remote support.
17. Nexon may be required to deploy or retain tools such as N-Able N-Central remote management and monitoring (RMM) and LogicMonitor on end-user devices (PC's) or network devices to enable Nexon to carry out some of its included responsibilities / tasks.

18. Nexon cannot provide guaranteed quality of service (QoS) for data / voice traffic which is transferred on WAN links which are not both utilising dedicated / uncontested infrastructure and on our MPLS network. In such an event, actual quality is best effort only.
19. Secure disposal and destruction of any required IT hardware is based upon a per-kilogram rate and will be quoted upon request.
20. NobleOak is to purchase (or approve the purchasing of) new components as required for hardware break/fix.
21. Nexon has relied upon information provided by NobleOak in preparing this Statement of Work. During the execution of the Transition & Onboarding Project, additional items or scope may be identified. Nexon will perform a true-up of the service at the end of Transition & Onboarding. Any additional services required will be discussed with NobleOak's primary contact prior to those services being provided and an additional Proposal provided if required.
22. NobleOak will provide adequate resources within its virtualization / IaaS platform (e.g. Microsoft Azure) (VM's, CPU, Memory, Disk, etc.) to run Nexon's monitoring collector appliance(s) if required. Specifications will be provided during Transition & Onboarding after a monitoring design has been completed.
23. Nexon staff will only use Nexon's existing ServiceNow instance for ITSM.
24. All systems and infrastructure are up-to-date (running supported software / firmware versions) and have no known stability issues at the time of Transition & Onboarding (technical supportability review).
25. Remediation of issues identified in the technical supportability review is excluded unless otherwise agreed in writing – these items can be performed on a time & materials basis as per the rate card.
26. SharePoint - Nexon will provide basic SharePoint Online support as part of its Microsoft 365 Managed Services. This includes assignment of permissions where Microsoft 365 Groups are used.
    a. Where more detailed SharePoint configuration, administration, and troubleshooting is required, this work would be performed through Nexon's Modern Workplace practice either on a Time & Materials basis or as a separately defined project, depending on the complexity.
27. Administrative access can be obtained to existing server workloads, network and firewall devices, public DNS services, Microsoft 365 and any other service in-scope for Nexon to migrate or manage.
28. Legacy backup data – It is assumed that the current service provider will copy legacy backup data from their backup environment to the Azure Blob store Nexon creates and provides them access to. It is assumed that this existing backup data was protected using Veeam Backup and Recovery software and will be provided in a portable format that Nexon can be read with using Veeam's free backup file recovery tools.
29. Historical SIEM data - It is assumed that the current service provider will copy historical SIEM data from their environment to the Azure Blob store Nexon creates and provides them access to. They must also describe the structure and format of the data copied to the location. It is assumed that this historical SIEM data is readable using freely available tools. Any costs to retrieve this data (including but not limited to software, licensing, tools, data transfer) will be the responsibility of NobleOak.
30. Historical ServiceNow data - The current service provider will provide appropriate access via API or official ServiceNow exports to Nexon to facilitate the import of historical cases.
31. Microsoft Azure's standard encryption (in flight and at rest) is suitable, https://learn.microsoft.com/en-us/azure/security/fundamentals/encryption-overview
32. Applications operating on servers, services or systems being migrated by or managed by Nexon currently incorporate appropriate mechanisms for encryption of data in transit.
33. All current Microsoft Azure CSP accounts and service subscriptions will be immediately transferred to Nexon to bill on behalf of Microsoft.
34. All Microsoft CSP subscription licensing (such as M365) will be procured from Nexon from the time that this agreement is executed.
35. Nexon will not incur any costs for the engagement of NobleOak's third parties or existing service providers. Outages can be scheduled, if required, to perform integration and migration activities with existing infrastructure.
36. Disaster recovery failover will be all or nothing and additional networking does not need to be architected to cater for individual system failover.

37. In-scope systems and infrastructure supporting platforms Nexon is required to work on are covered by vendor support contracts with appropriate support SLAs.
38. NobleOak will engage in-house and/or third-party resources with appropriate authority, technical and business knowledge who will be actively engaged in workshop, review and handover exercises.
39. NobleOak will be responsible for User Acceptance Testing (UAT), associated planning, documentation and baseline testing.
40. All devices will support the installation requirements of an Elastic Agents, if required, or can stream syslog events to an on-premises Oversight collector.
41. Environment has sufficient capacity to support the deployment of the Oversight VM.
42. Network connectivity for each NobleOak site is suitable to support network scanning from a central location.
43. All NobleOak sites that are required to host an instance of Nessus Scanner will adhere to the minimum networking and virtual requirements to support the Nessus Scanner.
44. All Nessus scanners will be managed remotely by Nexon.
45. NobleOak WAN sites are suitable to support scanning across links.
46. Vulnerability Management patching is limited to the capability of Nexon existing tools, N-Central or Microsoft In-Tune and require no functional testing.
47. Vulnerability Management patching of Applications, Network or Security devices / endpoint patches that require functional testing or not supported by the Nexon N-Central or Microsoft Intune process are out of scope and the responsibility of NobleOak.
48. FortiSASE security policy configuration will be limited to Firewall and Secure Web Gateway configuration. Additional functionality can be added if required via a MAC or service request.
49. Nexon assume that In-scope sites do not currently have overlapping IP address. Any additional services required to complete IP renumbering of LAN devices will be chargeable as a variance.
50. FortiSASE Roaming via FortiSASE Client will be deployed for Windows 10 or 11 SoE machines only.
51. NobleOak must maintain the contracted licensing numbers for the contract term. Additional licenses can be added but cannot be removed.
52. Nexon will need access to NobleOak key SME's during workshops, analysis and build, implementation and transition phases. Nexon delivery may be subject to availability of NobleOak's key stakeholders and SMEs.
53. Specific details of SNOW Lite integration will require NobleOak involvement for design.
54. NobleOak is responsible for the accuracy, maintenance, and management of data sources and integrity managed by it rather than Nexon.
55. Pricing assumes that NobleOak's project team has prior experience in contact centre management. Additional workshops required to provide basic contact centre knowledge may be charged for as a project variation.
56. All work apart from the actual system cutover is to be conducted during business-hours (unless otherwise explicitly specified). Any work conducted outside of business-hours may incur additional charges as per the rate card within the Investment Summary. Please note that a minimum of 4 hours is chargeable for after-hours work.
57. On-Site post cutover support is only available for sites with 10 or more users. Support for smaller sites will be delivered remotely.
58. NobleOak to provide resources to facilitate Nexon with workshops, complete configuration design document and cutover activities.
59. Operating systems and related components will be maintained in line with the supported minimums provided by Genesys.
60. Unless covered by another Nexon service, NobleOak is responsible for maintaining a security standard protecting access to their organisational data, Genesys Cloud CX applications, and the physical devices on which they run.
61. NobleOak's Desktop and IT environment is at the appropriate hardware vendor recommended specification to support the Genesys Cloud CX dialing environment.
62. Unless specified otherwise, Nexon professional services scoped are based on the Genesys Cloud CX standard feature offering and configuration without custom development or integrations.
63. NobleOak will use best endeavors to respond to reasonable requests for information within one (1) business day.

64. Initial NobleOak document review will be completed and feedback provided within 2 business days. A single round of revision is included, and final NobleOak document review and feedback will happen within 1 business day.
65. Nexon and NobleOak will negotiate in good faith to come to a resolution where new requirements arise during the migration project, onboarding or service delivery.
66. Whereby Nexon are waiting on NobleOak or third parties engaged by NobleOak (e.g., vendors, service providers etc.), SLA timers will be paused.
67. Where Nexon is to engage third party resolver groups, ticket lifecycle management will only be provided where:
    a. The associated third party and engagement model has been approved by Nexon.
    b. Nexon has been correctly granted the authority to work with the third party on behalf of NobleOak.
68. Where Nexon plans to use offshore capabilities, Nexon must obtain NobleOak's prior written consent.

11.2 Exclusions

1. The included scope of works and services lists the entirety of the scope of works and services that Nexon commits to performing as part of this agreement. Any additional scope of works and services may be carried out at Nexon's discretion only following agreement between Nexon and NobleOak in writing, and may incur additional charges.
2. In the event of a discrepancy between the information contained within this Statement of Work and any additional information, including but not limited to the service schedules and terms of service referred to in clause 11.1, the information contained within this Statement of Work will take precedence unless otherwise agreed upon by both Nexon and NobleOak in writing.
3. Any out-of-scope items that may be identified during ongoing discussions and the design phase will be called out and informed to NobleOak as and when they are found. Additional charges may be incurred to meet the new requirements.
4. Physical server management for on-premises server, understood to be decommissioned by November 2024. Available as a time & materials / ad-hoc support.
5. Decommissioning workloads and services operating in the existing service provider's cloud.
6. Solving issues found to pre-exist in the environment that fall outside of the scope of Nexon's existing managed service.
7. Providing software licensing, media, and support details as required for software requirements not included within this proposal.
8. Detailed Business Analysis for business requirements elicitation, analysis and definition or process documentation. Nexon will work with NobleOak during the discovery and build phases to identify solution requirements in workshops to ensure that a suitable solution is realised by NobleOak.
9. Any advanced Genesys Cloud CX features not specifically mentioned within this SoW are excluded from the initial project scope. Additional professional services can be scoped separately as needed.
10. Data Migration (Historical Recordings and Contact Centre historical data and reports etc.) is excluded from the proposed solution.
11. Changes to NobleOak's legacy systems or integration with any third-party software are not included unless specifically mentioned within this SOW.
12. Provision of dedicated network links is excluded. It is assumed that all users will connect to Genesys Cloud CX via the internet.
13. Data Migration from existing backup and security platforms.
14. Unless otherwise specified consulting services for data analysis, business change management, organisational structure alignment deemed outside of scope.

12 Agreement

This Statement of Work (this Agreement) is issued to NobleOak Aspire Pty Ltd under the Terms and Conditions of the Master Services Agreement (MSA) dated on or about the date of this Statement of Work between Nexon and NobleOak Aspire Pty Ltd.

To indicate your acceptance of this Agreement, please sign this page.

By signing below:

- You request Nexon Asia Pacific to supply the Service in accordance with this Agreement under the terms of the MSA.
- You acknowledge and declare that you have read and understood this document.

This Agreement will be a legally binding agreement between You and Nexon Asia Pacific Pty Ltd if and only if it is signed by duly authorised representatives of both parties.

Agreement Term: 36 months from completion of Transition & Onboarding

Nexon Opp ID: OPP-46532-V2F8 (28 June 2024)

13 Appendix A – Genesys Cloud CX Service Levels

Genesys will make the Genesys Cloud CX Service available 24 hours a day, 7 days a week, and use commercially reasonable best efforts to provide 100% uptime, except for any unavailability caused by circumstances beyond Genesys' reasonable control, including failure or delay of Customer's Internet connection, misconfiguration by the Customer or any third party acting on the Customer's behalf, issues on Customer's network, or telecommunications services contracted directly by the Customer.

This article focuses on defining the Severity levels, target Restoration and Resolution times and Root Cause Analysis provided by Genesys.

13.1 Severity Levels

Severity is defined as the impact an issue has on the Customer's ability to conduct business. Restoration targets are based on the Severity level assigned to an incident by Genesys Cloud Customer Care.

Priority is defined as the Customer designated level of importance and is used as a weighting factor when defining the Severity Level of an incident.

Genesys Cloud Customer Care orders issues based on the Severity level.

Severity level	Definition
1 – Critical	The Customer is experiencing a severe problem resulting in an inability to perform a critical business function. There is no workaround.
2 – High	The Customer is able to perform job functions, but performance is degraded or severely limited.
3 – Medium	The Customer's ability to perform job functions is largely unaffected, but noncritical functions or procedures are unusable or hard to use. A workaround is available.
4 – Low	Genesys Cloud is available and operational; trivial impact to Customer's business operations or Customer requires information or assistance on the Genesys Cloud Service capabilities or configuration.

The characteristics set forth in the above table are used to identify the criteria for the severity of a Customer's case. The assigned severity level for an issue may be mutually re-determined by both Genesys and the Customer during the issue resolution process, but Genesys shall have the final authority as to the actual Severity designation.

13.2 Target Initial Response Times

All target initial response times apply to business hours Monday through Friday, 8:00am to 5:00pm Customer local time. Severity 1 or Critical impacting incidents are supported and responded to 24x7x365.

Note: Reproducible errors that cannot be resolved promptly are escalated for further investigation and analysis.

Severity Level	Standard Initial Response Time
1 – Critical	A severe impact or degradation to the Customer's business operations caused by intermittent disruption of Genesys Cloud Service. Response Target: 10 min. (phone)
2 – High	Genesys Cloud Service is available and operational, moderate impact to the Customer's business operations. Response Target: 2 business hour (web)

3 – Medium	Genesys Cloud Service is available and operational; nominal adverse impact to the Customer's business operations. Response Target: 2 business hours (web)
4 – Low	Genesys Cloud Service is available and operational; no impact to the Customer's business operations or the Customer requires information or assistance on the Genesys Cloud Service capabilities or configuration. Response Target: 2 business hours (web)

13.3 Time to Restore

The objective of Genesys Cloud Customer Care is to restore functionality as quickly as possible.

- **Time to restore** is the amount of time a Customer is impacted before functionality is restored.
- **Time to resolve** is the amount of time it takes to resolve the root cause of an issue.

Time to restore targets are based on the assigned Severity Level.

13.4 Target Restoration Times

Genesys Cloud Customer Care analysts aim to reach restoration of your issue within the following target restoration times.

Severity Level	Restoration Target
1 – Critical	4 hours
2 – High	2 business days
3 – Medium	5 business days
4 – Low	N/A

13.5 Root Cause Analysis

When an outage is resolved, the Priority 1 case moves to either a Resolution Proposed or Closed state, and Genesys Cloud Customer Care creates a follow-up case as a Priority 3 for the root cause analysis (RCA) of the outage.

Genesys Cloud Customer Care provides the Customer with a status update from the Priority 1 case at time of closure. The update contains a brief explanation of the outage and an initial RCA, which briefly describes the known cause of the issue. If a complete RCA is not available at the time of the closing of the Priority 1 case, then the case is not closed until Genesys Cloud Customer Care completes a follow-up investigation.

Genesys Cloud Customer Care provides a comprehensive RCA to affected Customers within 5 business days for Critical and High issues affecting the Genesys Cloud platform.

14 Appendix B - Genesys Usage Fees and Nexon Call Rates

14.1 Genesys Usage Fees

14.1.1 Resource Services Fair Use Policy

Genesys offers all Customers a Genesys Cloud CX fair use policy for the following product features:

- BYOC Cloud
- Data storage
- Basic routing / IVR
- API on demand
- Voice transcription

Genesys encourages Customers to use the advanced technologies available within Genesys Cloud CX to customise the services for their business needs to drive better outcomes. In order to ensure a great experience for all Customers, Genesys has intentionally designed their fair usage allocations to be generous to meet Customer's day to day operational requirements without incurring any additional charges.

If your organisation exceeds the specified allocation amounts offering in a given month, you are billed for consumption over the allocation amount. Details of resource services allocation amounts, and resource overage charge information can be found on the Genesys Cloud Resource Centre:

https://help.mypurecloud.com/articles/genesys-cloud-fair-use-policy/

14.1.2 Genesys Enhanced Text to Speech (TTS)

Genesys Cloud includes a default Genesys TTS engine that includes voice and language options. This is provided at no additional cost. Genesys also offers the Genesys Enhanced TTS engine which is based Google Cloud text to speech technology. Pricing details for the Enhanced TTS offer can be found at:

https://help.mypurecloud.com/articles/genesys-enhanced-tts-pricing/

14.1.3 ACD Messaging (Social Media Direct Messaging and SMS) pricing

Third-party messaging, SMS long code, and SMS short code messaging allow Genesys Cloud agents to respond to interactions from a number of messaging platforms (WhatsApp, Facebook, Twitter, Instagram and LINE). Access to this functionality requires a Genesys Cloud CX 2, Genesys Cloud CX 2 Digital, Genesys Cloud CX 3, Genesys Cloud CX 3 Digital or Genesys Cloud User 1 Digital Upgrade II license. For pricing for the various messaging services, see:
https://help.mypurecloud.com/articles/messaging-pricing/

Customers using WhatsApp Business Solution via Genesys agree to be in compliance with the WhatsApp Business Solution Terms (**https://www.whatsapp.com/legal/business-solution-terms**) at all times when accessing and using the WhatsApp Business Solution via Genesys. Initial and continued access to the WhatsApp Business API is subject to approval and ongoing review by WhatsApp.

In addition to the Genesys Cloud CX Messaging pricing, Genesys will pass-through WhatsApp's conversation model billing. For more information on the WhatsApp pricing changes, as well as examples, see **https://developers.facebook.com/docs/whatsapp/pricing/conversationpricing**.

Customers agree to abide by Facebook terms and policies when using the Facebook Messenger integration with Genesys Cloud CX:

- Terms: **https://www.facebook.com/terms.php**
- Commercial Terms: **https://www.facebook.com/legal/commercial_terms**
- Platform Policy: **https://developers.facebook.com/policy**

Approval and continuing usage of the Facebook Messenger platform is subject to initial and ongoing review and monitoring by Facebook.

14.1.4 Genesys Dialog Engine Bot and Genesys Digital Bot pricing

Genesys Cloud subscribers can add Genesys Dialog Engine Bot Flows and Genesys Digital Bot Flows, the Genesys native bot flow building tools in Architect, to their subscription. Charges for Genesys Dialog Engine Bot Flows and Genesys Digital Bot Flows vary, depending on whether the bot conversation takes place on a voice or digital channel.

- Genesys charges conversations on the voice channel per each minute that the Genesys Dialog Engine Bot Flow or Genesys Digital Bot Flow runs, in 15-second increments.
- Genesys charges conversations on digital (chat and messaging channels) per session. Each session includes up to eight dialog turns, or request response pairs, in the bot conversation. If the bot conversation contains more than eight turns, Genesys charges an extra session for every further group of eight turns.

For pricing for the Genesys Dialog Engine Bot and Digital Bot, please see:

https://help.mypurecloud.com/articles/genesys-dialog-engine-bot-flows-and-genesys-digital-bot-flows-pricing/

14.1.5 Bring Your Own Technology Services

The Genesys Cloud AppFoundry allows Customers to find and install third-party applications that offer increased functionality and entirely new capabilities that integrate into Genesys Cloud.

Examples include third-party applications to expand Genesys Cloud's IVR and self-service capabilities including interactive voice bots, automatic speech recognition (ASR), and text-to-speech (TTS).

As Customers use third-party technology solutions inside Genesys Cloud, they may incur charges from the third-party vendor. Customers acquire billing for these services directly, and Genesys Bring Your Own (BYO) utility charges appear on the Customer's monthly Genesys Cloud invoice.

Pricing for Bring your own technology services can be found here:

https://help.mypurecloud.com/articles/bring-your-own-technology-services-model-per-turn-minute-rates/

14.1.6 Outbound Email Pricing

Genesys Cloud supports sending email messages with the Email campaigns and Agentless email notifications features. In both features, the pricing for email messages can be found here:

https://help.mypurecloud.com/articles/email-pricing/

14.1.7 Predictive Engagement Pricing

Genesys Cloud 2 and Genesys Cloud 3 subscriptions include access to Genesys Predictive Engagement, a real-time journey analytics platform that observes and analyses visitors on Genesys Cloud Customer websites. Charges for Predictive Engagement are per event and pricing can be located here: **https://help.mypurecloud.com/articles/predictive-engagement-event-pricing/**

Committed usage and volume discounts can be applied to Predictive Engagement event pricing based on agreed committed usage.

14.1.8 Predictive Routing Pricing

Genesys Cloud Customers with Genesys Cloud 1, Genesys Cloud 2, and Genesys Cloud 3 subscriptions can add predictive routing. Predictive routing enables you to use machine learning to optimize your key performance indicators (KPIs) by matching each interaction with the available agent that is best able to handle it.

An interaction is said to be routed using predictive routing if it reaches an agent using predictive routing and is also answered. The price per interaction routed using Genesys predictive routing can e located here: **https://help.mypurecloud.com/articles/predictive-routing-pricing-and-billing/**

14.2 Nexon AnySIP Voice Rates

14.2.1 AnySip Voice Rates to be agreed

14.2.1.1 NobleOak and Nexon agree that:

14.2.1.2 Fees in respect of Nexon AnySIP Voice Rates are yet to be agreed;

14.2.1.3 Nexon and NobleOak will use best endeavours to agree fees in respect of Nexon AnySIP Voice Rates within a reasonable timeframe; and

14.2.1.4 No Nexon AnySIP Voice Rates will be payable unless and until there is agreement.

14.2.2 International Call Rates

- Flag fall $0.00
- All calls billed per second
